*Some people seem to be able to talk anybody into anything! Do they simply possess a natural talent that the rest of us can never hope to imitate? This refreshing book says "No!" and provides readers with a unique, proven, step-by-step analytical thinking process that anyone can use to analyze, organize, and present information in a persuasive way. **The Anatomy of Persuasion** literally dissects each step in the persuasion process. Readers will turn their great ideas into tangible realities as they learn how to:*

- * apply the two major principles of communication*
- * perceive the needs of others*
- * present the features and benefits of their idea*
- * understand the subconscious decisions people often make*
- * create a logical, error-free proposal (oral or written) that will win the day.*

*An incisive, essential guide to understanding one of today's most urgent -- and complex -- problems. **The Opioid Epidemic: What Everyone Needs to Know®** is an accessible, nonpartisan overview of the causes, politics, and treatments tied to the most devastating health crisis of our time. Its comprehensive approach and Q&A format offer readers a practical path to understanding the epidemic from all sides. Written by two expert physicians and enriched with stories from their experiences on the front lines of this epidemic, this book is a critical resource for any general reader -- and for the individuals and families fighting this fight in their own lives.*

Action learning is a continued process of learning and reflection with the support of a group of colleagues, working on real issues. The action learning method is increasingly used to bring innovation to many different fields of work. The principles of action learning can achieve improvement and transformation in a wide range of applications and disciplines, including professional training and educational contexts. This book is a comprehensive guide to action learning which maintains an accessible, practical focus throughout. It is packed with useful resources, including case studies and ideas for workshop sessions. Key topics covered include: * action learning in professional and educational settings * setting up, facilitating and evaluating an action learning programme * the roles and skills required to practice successfully * use of action learning in relation to the individual, the group and the organization * the role of reflection; and action learning theory. Newcomers to the area of action learning will find this an essential introduction which can be put to use straight away, while more experienced practitioners seeking a deeper understanding will value the thorough analysis of action learning theory.

Create personal best performance at will—and revel in the achievement! If you have ever watched athletes performing at their best, you have witnessed the power of “the Zone”—that state where everything clicks and personal and team bests are the norm. In *The Winner’s Way*, Dr. Pam Brill tells readers how they, too, can achieve the Zone of top performance, turning goals - whether in the wide world of sports, work or daily life—into positive, results-driving action. With her 3 A’s - activation, attention and attitude—Dr. Brill supercedes previous wisdom by systematically bringing together these three crucial elements to hurdle personal obstacles and finish—again and again—always the winner. Out of her years of research on peak performance in sport and work, coaching to elite athletes and top corporations, and teaching at Dartmouth Medical School, Brill, a psychologist, has put together, and field tested, her unique *Winner’s Way*™ system. The *Winner’s Way* offers readers a proven, user-friendly method to identify, engage, and drive strategic change for continual achievement in the face of never-ending challenge. That racing heart and those white knuckles? They’re the result of the chemical deluge that ramps activation to high speed—but without proper 3A alignment, this power within can derail attention and attitude. Tunnel vision is no accident. Negative beliefs about self and potential will always get in the way. Plagued instead by listlessness, wandering attention, an apathetic attitude? These are all due to another chemical reaction—with symptoms readers learn to identify and then re-ramp to their best strengths. Throughout *The Winner’s Way*, Dr. Brill provides example after example so readers can adapt, according to their personal make-up, the steps to winning achievement that become second nature. On command, our readers will learn to: Change a poor attitude Pull out of a downspin Use language as an arsenal, fortress, and medic "Debrief" from experiences by identifying what was done well—and what should be done differently next time Examine and challenge habitual assumptions . . . plus deploy strategies for dealing with performance anxiety, fear of rejection, technology overload, and more to help recapture their love for the game of life. *The Winner’s Way* is straight forward, makes sense—and it works! Let the game of life begin! On your marks, get set, go!

Saving lives through organ transplantation has become increasingly possible thanks to advances in research and care. Today, the complex field of transplantation continues to develop rapidly, fuelled by demographic change and further evolutions in scientific understanding. The Oxford Textbook of Transplant Anaesthesia and Critical Care has been written and edited by pioneers in the field of organ transplantation with an international team of authors, in order to equip anaesthetists and intensivists with the knowledge and training necessary to provide high quality and evidence-based care. The text addresses fundamental aspects of scientific knowledge, care of the donor patient, transplant ethics and special considerations. Dedicated sections address each of the major organs; kidney, pancreas, liver, heart and lung, intestinal and multivisceral. Within each organ-based section, expert authors explore underlying disease, planning for transplantation, specialized procedures, perioperative and critical care management as well as post-transplant considerations. Focus points for future developments in transplant immunology are also set out, inspiring current practitioners to engage with current clinical research and help participate in the further advancement of the science of transplantation. The print edition of the Oxford Textbook of Transplant Anaesthesia and Critical Care comes with a year's access to the online version on Oxford Medicine Online. By activating your unique access code, you can read and annotate the full text online, follow links from the references to primary research materials, and view, enlarge and download all the figures and tables.

For teachers in higher education who haven't been able to catch up with developments in teaching and learning, James Davis and Bridget Arend offer an introduction that focuses on seven coherent and proven evidence-based strategies. The underlying rationale is to provide a framework to match teaching goals to distinct ways of learning, based on well-established theories of learning. The authors present approaches that readers can readily and safely experiment with to achieve desired learning outcomes, and build confidence in changing their methods of teaching. Research on learning clearly demonstrates that learning is not one thing, but many. The learning associated with developing a skill is different from the learning associated with understanding and remembering information, which in turn is different from thinking critically and creatively, solving problems, making decisions, or change paradigms in the light of evidence. Differing outcomes involve different ways of learning and teaching strategies. The authors provide the reader with a conceptual approach for selecting appropriate teaching strategies for different types of content, and for achieving specific learning objectives. They demonstrate through examples how a focused and purposeful selection of activities improves student performance, and in the process makes for a more effective and satisfying teaching experience. The core of the book presents a chapter on each of the seven ways of learning. Each chapter offers a full description of the process, illustrates its application with examples from different academic fields and types of institutions, clearly describes the teacher's facilitation role, and covers assessment and online use. The seven ways of learning are: Behavioral Learning; Cognitive Learning; Learning through Inquiry; Learning with Mental Models; Learning through Groups and Teams; Learning through Virtual Realities; and Experiential Learning. Along the way, the authors provide the reader with a basis for evaluating other approaches to teaching and other learning methodologies so that she or he can confidently go beyond the "seven ways" to adapt or adopt further strategies. This is the ideal companion for teachers who are beginning to explore new ways of teaching, and want to do some serious independent thinking about learning. The book can also be used to prepare graduate students for teaching, and will be welcomed by centers for teaching and learning to help continuing faculty re-examine a particular aspect of their teaching.

The most likely use for Haack's volume will be in introductory pragmatism courses and it is eminently appropriate for this task. However, others who would wish to speak out about pragmatism authoritatively would do well to go through the book from cover to cover. Outside of philosophy, the volume provides an introduction to a vital aspect of what philosophy has to offer to other disciplines, psychology among them...it is hard to think what could have been done to improve upon the collection.-Metapsychology

Morris R. Cohen once described pragmatism as a philosophy for people who cannot think; and Bertrand Russell feared that pragmatism would lead philosophy into cosmic impiety. Nothing could be further from the truth. Pragmatism was one of the most fruitful philosophical movements of the late nineteenth century, and has continued to be a significant influence on some of the major figures in philosophy - F. P. Ramsey, W. V. Quine, Sidney Hook, Nelson Goodman, Hilary Putnam, and many others. Today some even speak of a remarkable renaissance of pragmatism. Very often, though, what they have in mind is not the rich heritage of the classical pragmatist tradition, but a radical self-styled neo-pragmatism that has of late transmuted the reformist aspirations of classical pragmatism into a kind of revolutionary anti-intellectualism - a radical neo-pragmatism that seems to confirm Russell's worst fears. Asking what we can learn from the older pragmatist tradition, and what we can salvage from the intellectual shipwreck of the new, Susan Haack, with the assistance of Robert Lane, has put together a wide-ranging anthology that tells the story of the evolution of pragmatism from its origins in C. S. Peirce's hopes of making philosophy more scientific and William James's of unstiffening our theories, to the radical literary-political neo-pragmatism recently popularized by Richard Rorty. Opening with a history of pragmatism from its inception to the present day, and closing with Haack's famous interview with Peirce and Rorty, the book presents a broad and diverse

selection of pragmatist writings - classical and contemporary, reformist and revolutionary - on logic, metaphysics, theory of inquiry, philosophy of mind, philosophy of religion, aesthetics, philosophy of education, and moral, social, and political philosophy. Susan Haack (Coral Gables, FL) is Cooper Senior Scholar in Arts and Sciences, professor of philosophy, and professor of law at the University of Miami. She is the author of numerous highly acclaimed books including *Defending Science-Within Reason*; *Philosophy of Logics*; *Evidence and Inquiry*; *Deviant Logic, Fuzzy Logic: Beyond the Formalism*; and *Manifesto of a Passionate Moderate: Unfashionable Essays*. Robert Lane (Carrollton, GA) is assistant professor of philosophy at the University of West Georgia. He has published on American philosophy, the history of logic, and ethics.

Psychology, focusing on processes that occur inside the individual and Sociology, focusing on social collectives and social institutions, come together in Social Psychology to explore the interface between the two fields. The core concerns of social psychology include the impact of one individual on another; the impact of a group on its individual members; the impact of individuals on the groups in which they participate; the impact of one group on another. This book is a successor to *Social Psychology: Social Perspectives and Sociological Perspectives in Social Psychology*. The current text expands on previous handbooks in social psychology by including recent developments in theory and research and comprehensive coverage of significant theoretical perspectives.

This book constitutes the thoroughly refereed post-conference proceedings of the 12th International Conference on Learning and Intelligent Optimization, LION 12, held in Kalamata, Greece, in June 2018. The 28 full papers and 12 short papers presented have been carefully reviewed and selected from 62 submissions. The papers explore the advanced research developments in such interconnected fields as mathematical programming, global optimization, machine learning, and artificial intelligence. Special focus is given to advanced ideas, technologies, methods, and applications in optimization and machine learning.

The Political Years

Marilyn Waring

The Winner's Way

"Collaborative effort by Health Canada, Statistics Canada and the Canadian Institute for Health Information"--P. 1.

In 1975, Marilyn Waring was elected to the New Zealand Parliament as the MP for Raglan. Aged just twenty-three, she was one of only a few female MPs who served through the turbulent years of Muldoon's government. For nine years, Waring was at the centre of major political decisions, until her parliamentary career culminated during the debate over nuclear arms. When Waring informed Muldoon that she intended to cross the floor and vote for the opposition bill which would make New Zealand nuclear free, he called a snap election. And the government fell. . . . This is an autobiographical account of Waring's extraordinary years in parliament. She tells the story of her journey from being elected as a new National Party MP in a conservative rural seat to being publicly decried by the Prime Minister for her 'feminist anti-nuclear stance' that threatened to bring down his government. Her tale of life in a male-dominated and relentlessly demanding political world is both uniquely of its time and still of pressing relevance today.

The self-knower has become a hero within many contemporary cultures. This hero goes by various different titles, including the "self-insightful/' the "self-actualized/' the "autonomous and mature/' the "representative of independent thinking/' the "morally virtuous/' and many more. The common denominators of civilization's preoccupation with the self knower are (1) the mundane, popular literature that draws our attention to our "inner being" and (2) the remarkable intensity of therapies and quasitherapies that promise insight into the true core of our inner being. A characteristic example from an extensive, week- or month-long training course would read, "Come because you want to discover your self Through Mr. X [the group leader], we can realize our true identities This gives our lives sense and

perspective." We have tried to trace the logic underlying the diverse self-knower movements and have found three common themes underlying them. For one, the varieties of theories and treatments associated with self-knowledge are interested exclusively in the appearance of the self-knower. Each representative of the self-knower school has its own set of criteria for identifying the self-knowing person, and in turn, each member of the self-knower school represents certain convictions about how individuals should be evaluated. For instance, if someone manifests warmth and charity, that person is likely to be pronounced healthy, adjusted, and self-knowing.

The field of educational psychology draws from a variety of diverse disciplines including human development across the life span, measurement and statistics, learning and motivation, and teaching. And within these different disciplines, many other fields are featured including psychology, anthropology, education, sociology, public health, school psychology, counseling, history, and philosophy. In fact, when taught at the college or university level, educational psychology is an ambitious course that undertakes the presentation of many different topics all tied together by the theme of how the individual can best function in an "educational" setting, loosely defined as anything from pre-school through adult education. Educational psychology can be defined as the application of what we know about learning and motivation, development, and measurement and statistics to educational settings (both school- and community-based).

Until now, there has only been a shallow understanding of how the leadership actions of project managers interact with ethics and social responsibility. Empirical research into this subject has been sparse.

Responsible Leadership, by Nicholas Clarke, Alessia D'Amato, Malcolm Higgs, and Ramesh Vahidi is the first study to investigate how the relationships among managers, team members, and other stakeholders can bring about personal and ethical conflicts that impact decision making. In this groundbreaking book, the authors explore how those who serve as leaders on projects can exercise their roles in ways that respond to the ever-increasing need for ethical decision making. They examine the factors that enable and constrain responsible leadership, looking at the issues faced by project managers as they interact with team members and other stakeholders. *Responsible Leadership* also provides new insights into how project managers view the moral implications of conflicts that occur as they conduct their work and is a valuable addition to the project management toolkit.

A flame-throwing epidemiologist talks about sex, drugs, and the mistakes (dismal), ideologies (vicious), and hopes (realistic) of international AIDS prevention. When people ask Elizabeth Pisani what she does for a living, she says, "sex and drugs." As an epidemiologist researching AIDS, she's been involved with international efforts to halt the disease for fourteen years. With swashbuckling wit and fierce honesty, she dishes on herself and her colleagues as they try to prod reluctant governments to fund HIV prevention for the people who need it most—drug injectors, gay men, sex workers, and johns. Pisani chats with flamboyant Indonesian transsexuals about their boob jobs and watches Chinese streetwalkers turn away clients because their SUVs aren't nice enough. With verve and clarity, she shows the general reader how her profession really works; how easy it is to draw wrong conclusions from "objective" data; and, shockingly, how much money is spent so very badly. "Exhibit A": the 45 billion taxpayer dollars the Bush

administration is committing to international AIDS programs.

Communication in Autism adopts a multidisciplinary approach to explore one of the most common developmental disorders associated with communication impairment. Perhaps the most fascinating thing about communication in autism is that variation is as extreme as it could possibly be. While some individuals with autism have age-appropriate language, a number have exceptional language skills; others have little or no spoken language. In between these extremes are individuals who experience significant linguistic impairments. These impairments can affect peer relations and literacy skills. The chapters in this volume provide comprehensive coverage of both the theoretical underpinnings and the practical aspects of autistic communication. The result is a volume that showcases the wide range of methodologies being used in this field of research. It is invaluable for scientists, service providers, parents, individuals with autism, and students learning about communication and autism (e.g., in psychology, speech pathology, and education).

Careers in astronomy for women (as in other sciences) were a rarity in Britain and Ireland until well into the twentieth century. The book investigates the place of women in astronomy before that era, recounted in the form of biographies of about 25 women born between 1650 and 1900 who in varying capacities contributed to its progress during the eighteenth, nineteenth and early twentieth centuries. There are some famous names among them whose biographies have been written before now, there are others who have received less than their due recognition while many more occupied inconspicuous and sometimes thankless places as assistants to male family members. All deserve to be remembered as interesting individuals in an earlier opportunity-poor age. Placed in roughly chronological order, their lives constitute a sample thread in the story of female entry into the male world of science. The book is aimed at astronomers, amateur astronomers, historians of science, and promoters of women in science, but being written in non-technical language it is intended to be of interest also to educated readers generally.
