A peasant family, driven by the drought, walks to exhaustion through an arid land. As they shelter at a deserted ranch, the drought is broken and they linger, tending cattle for the absentee ranch owner, until the onset of another drought forces them to move. In the desert plants that defeat all rigors of wind and weather, the family maintains its will to survive in the harsh and solitary land. Intimately acquainted with the region of which he writes and keenly appreciative of the character of its inhabitants, into whose life he has woven his own, Graciliano Ramos depicts them in a style whose austerity well becomes the spareness of the subject, creating a gallery of figures that rank as classic in contemporary Brazilian literature.

This book displays the striking creativity and profound insight that characterized Freire's work to the very end of his life—an uplifting and provocative exploration not only for educators, but also for all that learn and live.

This book is a comprehensive guide for the study of the history and development of the document of the modern day karate movement. Inner strength and personal character development are stressed through an active daily regimen of physical exercise and martial technique. Kara-te Do Kyohan is Master Funakoshi's gift to mankind. An informed student of the life was to share his knowledge and the benefits he acquired and experienced through a life of conscious self-discipline rooted in the principles of Karate Do. Gichen Funakoshi (1868-1957) was born in Shuri, Okinawa and, as a boy, began training with Yasujiro Itosu (Naha-te). Through many years of diligent practice these two styles were blended and became what is known today as Shotokan Karate.

Descartes' ideas not only changed the course of Western philosophy but also led to or transformed the fields of metaphysics, epistemology, physics and mathematics, political theory and ethics, psychoanalysis, and literature and the arts. This book reprints Descartes' major works, Discourse on Method and Meditations, and presents essays by leading scholars that explore his contributions in each of those fields and place his ideas in the context of his time and our own. There are chapters by David Weissman on metaphysics and psychoanalysis, John Post on epistemology, Lou Massa on physics and mathematics, William T. Bluhm on politics and ethics, and Thomas Pavel on literature and art. These essays are accompanied by others by David Weissman and by Stephen Toulmin that introduce the idea of intellectual lineages, discuss the period in which Descartes wrote, and reexamine the premises of his philosophy in light of contemporary philosophical, political, and social thinking.

The Allegory of the Cave, or Plato's Cave, was presented by the Greek philosopher Plato in his work Republic (514a – 520a) to compare "the effect of education () and the lack of it on our nature". It is written as a dialogue between Plato's brother Glaucon and his mentor Socrates, narrated by the latter. The allegory is presented after the analogy of the sun (508b – 509c) and the analogy of the divided line (509d – 511e). All three are characterized in relation to dialectic at the end of Books VII and VIII (531d – 534e). Plato has Socrates describe a group of people who have lived chained to the wall of a cave all of their lives, facing a blank wall. The people watch shadows projected on the wall from objects passing in front of a fire behind them, and give names to these shadows. The shadows are the prisoners' reality.

School maths is not the interesting part. The real fun is elsewhere. Like a magpie, Ian Stewart has collected the most enlightening, entertaining and vexing 'curiosities' of maths over the years... Now, the private collection is displayed in his cabinet. There are some hidden gems of logic, geometry and probability -- like how to extract a cherry from a cocktail glass (harder than you think), a pop up dodecahedron, the real reason why you can't divide anything by zero and some tips for making money by proving the obvious. Scattered among these are keys to unlocking the mysteries of Fermat's last theorem, the Poincaré Conjecture, chaos theory, and the P/NP problem for which a million dollar prize is on offer. There are beguiling secrets about familiar names like Pythagoras or prime numbers, as well as anecdotes about great mathematicians. Pull out the drawers of the Professor's cabinet and who knows what could happen...

Author's best-known and most controversial study relates the rise of a capitalist economy to the Puritan belief that hard work and good deeds were outward signs of faith and salvation.
