It can be argued that the differences in content and approach between physical and human geography, and also within its sub-disciplines, are often overemphasised. The result

is that geography is often seen as a diverse and dynamic subject, but also as a disorganised and fragmenting one, without a focus. Unifying Geography focuses on the plural and competing versions of unity

This collection of papers, originally
published in 1981, reviews and evaluates
past and possible future advances in a
field of central importance to human
geography: behavioral geography. The

book includes critical studies which show how the approach has contributed substantially to work within four areas of amjor application in behavioral geography: urban travel behavior, environmental cognition, residential mobility and spatial diffusion. The final section of the book focuses on the

The relationship between geography and philosophy is still largely in need of being explored. Geographers and philosophers share the responsibility for that. On the one hand, geographers have considered as

a dangerous deviation any attempt to elaborate an image of the Earth which was not a mere replica of a cartographic representation. On the other hand, philosophers have generally been uninterested in a discipline offering little chance for critical reflection. In light of these considerations, the purpose of this
