Architecture And Power In The Ancient Andes The Archaeology Of Public Buildings New Studies In Archaeology

This major work provides the first comprehensive history of one of modernism's most defining and controversial architectural legacies: the 20th-century drive to provide 'homes for the people'. Vast programmes of mass housing – high-rise, low-rise, state-

funded, and built in the modernist style – became a truly global phenomenon, leaving a legacy which has suffered waves of disillusionment in the West but which is now seeing a dramatic, 21st-century renaissance in the booming, crowded cities of East Asia. Providing a global approach to the history of Modernist mass-housing production, this authoritative study combines architectural history with the broader social, political, cultural aspects of mass housing – particularly the 'mass' politics of power and state-building throughout the 20th century. Exploring the relationship between built

form, ideology, and political intervention, it shows how mass housing not only reflected the transnational ideals of the Modernist project, but also became a central legitimizing pillar of nation-states worldwide. In a compelling narrative which likens the spread of mass housing to a 'Hundred Years War' of successive campaigns and retreats, it traces the history around the globe from Europe via the USA, Soviet Union and a network of international outposts, to its ultimate, optimistic resurgence in China and the East – where it asks: Are we facing a new dawn for mass

housing, or another 'great housing failure' in the making?

The American architect Louis Kahn (1901 - 1974) is regarded as one of the great master builders of the twentieth century. With complex spatial compositions, an elemental formal vocabulary and a choreographic mastery of light, Kahn created buildings of archaic beauty. As the first comprehensive publication on this architect in 20 years, the book *Louis Kahn - The Power of Architecture* presents all of his important projects. It includes essays by prominent Kahn experts and an expansive illustrated

biography with many new facts and insights about Kahn's life and work. In a number of interviews, leading architects such as Frank Gehry, Renzo Piano, Peter Zumthor and Sou Fujimoto underline Kahn's significance in today's architectural discourse. An extensive catalogue of works features original drawings and architectural models from the Kahn archive. The compendium is further augmented by a portfolio of Kahn's travel drawings as well as photographs by Thomas Florschuetz, which offer completely new views of the Salk Institute and the Indian Institute of Management.

Does energy consumption influence architectural style? Should more energy-efficient buildings look different? Can that "look" be used to explain or enhance their performance? Architecture and Energy provides architects and architectural theorists with more durable arguments for environmental design decisions, arguments addressing three different scales or aspects of contemporary construction. By drawing together essays from the leading experts in the field, this book engages with crucial issues in sustainable design, such as: The larger role of energy in forming the cultural and economic systems in

which architecture is conceived, constructed, and evaluated The different measures and meanings of energy "performance" and how those measures are realized in buildings The specific ways in which energy use translates into the visible aspects of architectural style. Drawing on research from the UK, US, Europe, and Asia the book outlines the problems surrounding energy and architecture and provides the reader with a considered overview of this important topic.

This scholarly account of the various ways in which space is configured by power, and in which space becomes a resource for power,

Performance and Style

Alternative Pathways to Complexity focuses on the themes of architecture, economics, and power in the evolution of complex societies. Case

studies from Mesoamerica, Asia, Africa, and Europe examine the relationship between political structures and economic configurations of ancient chiefdoms and states through a framework of comparative archaeology. A group of highly distinguished scholars takes up important issues, theories, and methods stemming from the nascent body of research on comparative archaeology to showcase and apply important theories of households, power, and how the development of complex societies can be extended and refined. Drawing on the archaeological, ethnohistorical, and ethnographic

records, the chapters in this volume contain critical investigations on the role of collective action, economics, and corporate cognitive codes in structuring complex societies. Alternative Pathways to Complexity is an important addition to theoretical development and empirical research on Mesoamerica, the Old World, and cross-cultural studies. The theoretical implications addressed in the chapters will have broad appeal for scholars grappling with alternative pathways to complexity in other regions as well as those addressing diverse cross-cultural research. ***The Edifice Complex explores the intimate and
inextricable relationship between power, money
and architecture in the twentieth century. How
and why have presidents, prime ministers,
mayors, millionaires and bishops come to share
such a fascination with grand designs? From***

Blair to Mitterrand, from Hitler to Stalin to Saddam Hussein, architecture has become an end in itself, as well as a means to an end. This is a book of genuine timeliness, throwing new light on the motivations of the rich and powerful around the world - and on the ways they seek to affect us.

An influential architect and draftsman presents a guided tour of three decades of American buildings. Sixty striking drawings, accompanied by informative captions, offer views of Taliesin West, Lever House, and other landmarks. Jeanne Halgren Kilde's survey of church

architecture is unlike any other. Her main concern is not the buildings themselves, but rather the dynamic character of Christianity and how church buildings shape and influence the religion. Kilde argues that a primary function of church buildings is to represent and reify three different types of power: divine power, or ideas about God; personal empowerment as manifested in the individual's perceived relationship to the divine; and social power, meaning the relationships between groups such as clergy and laity. Each type intersects with notions of Christian creed, cult, and code, and is

represented spatially and materially in church buildings. Kilde explores these categories chronologically, from the early church to the twentieth century. She considers the form, organization, and use of worship rooms; the location of churches; and the interaction between churches and the wider culture. Church buildings have been integral to Christianity, and Kilde's important study sheds new light on the way they impact all aspects of the religion. Neither mere witnesses to transformations of religious thought or nor simple backgrounds for religious practice, church buildings are, in Kilde's view, dynamic

Looks at buildings constructed at the behest of political and religious leaders, dictators, and millionaires

What do outer space capsules, submarines, and office buildings have in common? Each is conceived as a closed system: a self-sustaining physical environment demarcated from its surroundings by a boundary that does not allow for the transfer of matter or energy.

Contemporary discussions about global warming, recycling, and sustainability have emerged as direct conceptual constructs related to the study and analysis of closed systems. From the space program to countercultural architectural groups experimenting with

autonomous living, this publication documents a disciplinary transformation and the rise of a new environmental consensus in the form of a synthetic naturalism. It presents an archive of 39 historical living prototypes from 1928 to the present that put forth an unexplored genealogy of closed resource regeneration systems. Prototypes are presented through unique discursive narratives with historical images, and each includes new analysis in the form of a feedback drawing that problematizes the language of environmental representation by illustrating loss, derailment, and the production of new substances and atmospheres.

The Edifice Complex

This is the first full-length study on the connections between English architecture and intellectual change between 1660 and 1730. As new ideas developed in post-Restoration England across the realms of politics, culture, academia and morality, so too did architectural expression of these

ideas. Power and Virtue articulately engages English architecture with notions of power and virtue in terms of empirical knowledge on the one hand and humanism and virtuosi on the other. Aimed at an academic readership in history and theory of architecture and the history of English architecture, this unique study will also interest those studying the ideas of material culture.

Historical archaeology, one of the fastest growing of archaeology's sub fields in North America, has developed more slowly in

Central and particularly South America. Happily, this circumstance is ending as a growing number of recent projects are successfully integrating textual and material culture data in studies of the events and processes of the last 500 years. This interval and this region—often called Ibero-America—have been studied for a century or more by historians with traditional perspectives and emphases focusing on colonial elites and large-scale politico-economic events. Such inclinations fit well into world-system and other core-periphery

models that have had a major impact on historical thought since the 1970s. Over the past 20 years or so, however, world-system models have come under fire from historians, anthropologists, and others, in part because the emphasis on global trends and the growth of capitalism - nies the importance of understanding variability in local histories and circumstances. Historians have increasingly turned their attention to local, rural, and domestic contexts, thereby illuminating the great diversity of responses to colonial domination

that were played out in the vast arena of the Americas. It is not coincidental that this is the intellectual climate in which historical archaeology is establishing itself in Central and South America.

Today the Topkapi Palace in Istanbul seems a haphazard aggregate of modest buildings no longer capable of conveying imperial power. Yet it is at once the most celebrated of all Islamic palaces and the least understood. Gulru Necipoglu brings together largely unpublished sources, both written and visual, along with information

derived from the architectural remains to uncover the processes through which the meaning of the palace was once produced, before it came to represent a stereotyped microcosm of oriental despotism imbued with the exotic otherness of the East. She relocates the Topkapi in its historical context, a context that included not only the circumstances of its patronage, but the complex interaction of cultural practices, ideologies, and social codes of recognition. Necipoglu focuses on the imperial iconography of palatial forms that lack

monumentality, axiality, and rational-geometric planning principles to decipher codes of grandeur that are no longer obvious to the modern observer. She reconstructs the architectural and ceremonial impact of the palace through a step-by-step tour of its buildings, demonstrating how the palace was experienced as a processional sequence of separate courts and seemingly disjointed architectural elements that were nevertheless integrated into a coherent whole by passage through time and space.

Far more than an analysis of the architectural program of the palace, Architecture, Ceremonial, and Power raises questions and provides answers to fundamental concerns about the ideology of absolute sovereignty, the interplay between architecture and ritual, and the changing perceptions of a building through the centuries, a building that drew upon a wide range of Palatine traditions, mythical, Islamic, Turco-Mongol, Romano-Byzantine, and Italian Renaissance. We are taught to believe in originals. In art

and architecture in particular, original objects vouch for authenticity, value, and truth, and require our protection and preservation. The nineteenth century, however, saw this issue differently. In a culture of reproduction, plaster casts of building fragments and architectural features were sold throughout Europe and America and proudly displayed in leading museums. The first comprehensive history of these full-scale replicas, Plaster Monuments examines how they were produced, marketed, sold, and displayed,

and how their significance can be understood today. Plaster Monuments unsettles conventional thinking about copies and originals. As Mari Lending shows, the casts were used to restore wholeness to buildings that in reality lay in ruin, or to isolate specific features of monuments to illustrate what was typical of a particular building, style, or era. Arranged in galleries and published in exhibition catalogues, these often enormous objects were staged to suggest the sweep of history, synthesizing structures from vastly different

regions and time periods into coherent narratives. While architectural plaster casts fell out of fashion after World War I, Lending brings the story into the twentieth century, showing how Paul Rudolph incorporated historical casts into the design for the Yale Art and Architecture building, completed in 1963. Drawing from a broad archive of models, exhibitions, catalogues, and writings from architects, explorers, archaeologists, curators, novelists, and artists, Plaster Monuments tells the fascinating story of a premodernist aesthetic

"Compares plans of 22 structures on the Peruvian north coast dating from preceramic to Chimu. Uses objective criteria to assess social purpose (centrality, ubiquity);

symbolic intent (scale, permanence); and social control (visibility, access pattern)"--Handbook of Latin American Studies, v. 57.

Bestselling author Alain de Botton considers how our private homes and public edifices influence how we feel, and how we could build dwellings in which we would stand a better chance of happiness. In this witty, erudite look at how we shape, and are shaped by, our surroundings, Alain de Botton applies Stendhal's motto that "Beauty is the promise of happiness" to the spaces we inhabit daily. Why should we pay attention to what architecture has to say to us? de Botton asks provocatively. With his trademark lucidity and humour, de Botton traces how human needs

and desires have been served by styles of architecture, from stately Classical to minimalist Modern, arguing that the stylistic choices of a society can represent both its cherished ideals and the qualities it desperately lacks. On an individual level, de Botton has deep sympathy for our need to see our selves reflected in our surroundings; he demonstrates with great wisdom how buildings — just like friends — can serve as guardians of our identity.

Worrying about the shape of our sofa or the colour of our walls might seem self-indulgent, but de Botton considers the hopes and fears we have for our homes at a new level of depth and insight. When shopping for furniture or remodelling the kitchen, we don't just consider

functionality but also the major questions of aesthetics and the philosophy of art: What is beauty? Can beautiful surroundings make us good? Can beauty bring happiness? The buildings we find beautiful, de Botton concludes, are those that represent our ideas of a meaningful life. The Architecture of Happiness marks a return to what Alain does best — taking on a subject whose allure is at once tantalizing and a little forbidding and offering to readers a completely beguiling and original exploration of the subject. As he did with Proust, philosophy, and travel, now he does with architecture.

The Social (Re)Production of Architecture brings the debates of the ‘right to the city’ into today’s context of

ecological, economic and social crises. Building on the 1970s' discussions about the 'production of space', which French sociologist Henri Lefebvre considered a civic right, the authors question who has the right to make space, and explore the kinds of relations that are produced in the process. In the emerging post-capitalist era, this book addresses urgent social and ecological imperatives for change and opens up questions around architecture's engagement with new forms of organization and practice. The book asks what (new) kinds of 'social' can architecture (re)produce, and what kinds of politics, values and actions are needed. The book features 24 interdisciplinary essays written by leading theorists and practitioners including

social thinkers, economic theorists, architects, educators, urban curators, feminists, artists and activists from different generations and global contexts. The essays discuss the diverse, global locations with work taking different and specific forms in these different contexts. A cutting-edge, critical text which rethinks both practice and theory in the light of recent crises, making it key reading for students, academics and practitioners.

Since autumn 1996 the architectural debate in London has been noticeably accelerated by the sequence of lectures made possible by the generosity of Frank Lowe and the Lowe Group. It is the 96-99 Lowe Lecture diversity and vigour that marks them out from the usual series. London

is an ideal place to absorb and respond to the continual waves of invention, questioning and inspiration offered by the architect concerned. The Bartlett School is now a recognised centre for experiment and analysis which provides a lively background for The Lowe Lectures and this book attempts to capture the 'hothouse' feel of the lectures themselves. Internationally familiar names such as, Libeskind and Woods are quickly followed by the Russian Kirpichev, the Austrian Richter, or the New Yorker Stan Allen, and others who together suggest that there is currently a ferment of creativity in architecture and that, perhaps, the 21st Century can be a 'Golden Period' for architecture.

translation and strategic appropriation of imported ideas and practices by local architects and builders. The book transforms our understandings of the region's modern architecture by moving beyond a consideration of architecture as an aesthetic artifact and instead examining its entanglement with different dynamics of power.

If the defining goal of modern-day business can be isolated to just one item, it would be the search for competitive advantage. And, as everyone in business

Read PDF Architecture And Power In The Ancient Andes The Archaeology Of Public Buildings New Studies In Archaeology

knows, it's a lot harder than it used to be. On the one hand, competition is more intense than ever--technological innovation, consumer expectations, government deregulation, all combine to create more opportunities for new competitors to change the basic rules of the game. On the other hand, most of the old reliable sources of competitive advantage are drying up: the hallowed strategies employed by GM, IBM, and AT&T to maintain their seemingly unassailable positions of dominance in the 1960s and

Read PDF Architecture And Power In The Ancient Andes The Archaeology Of Public Buildings New Studies In Archaeology

70s are as obsolete as the calvary charge. So in this volatile, unstable environment, where can competitive advantage be found? As David Nadler and Michael Tushman show, the last remaining source of truly sustainable competitive advantage lies in "organizational capabilities": the unique ways each organization structures its work and motivates its people to achieve clearly articulated strategic objectives. For too long, too many managers have thought about "organization" merely in terms of rearranging the boxes and lines

Read PDF Architecture And Power In The Ancient
Andes The Archaeology Of Public Buildings New
Studies In Archaeology

on an organizational chart--but as Competing by Design clearly illustrates, organizational strength is found far beyond one-dimensional diagrams. Managers must, argue Nadler and Tushman, understand the concepts and learn the skills involved in designing their organization to exploit their inherent strengths. All the reengineering, restructuring, and downsizing in the world will merely destabilize a company if the change doesn't address the fundamental patterns of performance--and if the change doesn't

design and organization of important building types in the United States between the mid-nineteenth century and World War I. Beginning with settings such as prisons, that were specifically planned around surveillance, Anna Vemer Andrzejewski shows how surveillance also affected the design and use of various buildings and environments, including post offices, factories, offices, houses, and camp meetings. Working with great dexterity from case studies as well as scholarly sources, she argues that surveillance not only motivated a range of common buildings but was also a defining

Read PDF Architecture And Power In The Ancient Andes The Archaeology Of Public Buildings New Studies In Archaeology

practice of modernism. This wide ranging study draws on fundamental concepts from Michel Foucault, even as it revises and extends them. For Andrzejewski, surveillance is any act of sustained, close observation of others that is intended to transform behavior- of those under surveillance as well as those who initiate it. This definition allows her to illuminate the many ways in which those in positions of power have attempted to influence the actions of others, whether to create and enforce hierarchical boundaries between people, as in the workplace, or to affirm bonds between like-minded individuals,

as at Victorian-era revivalist camp meetings. Thinking about surveillance in these terms also allows Andrzejewski to consider ways in which it has influenced diverse American spaces, ranging from obvious settings relatively removed from daily life (like penal institutions) to everyday spaces familiar to most Americans (like middle-class houses). Moving across the era, as well as across building types, she shows that as the goals and contexts for surveillance changed, so did its realization in the built environment, resulting in a complicated landscape that influenced both everyday life

running of buildings. If we are to avoid catastrophic climate change then now, more than ever, we need beautiful but also intelligent buildings, and to retrofit - not demolish - those that remain. Both a celebration of human ingenuity and a passionate call for greater sustainability, this is a history of architecture for our times.

In an era of brash, expensive, provocative new buildings, a prominent critic argues that emotions—such as hope, power, sex, and our changing relationship to the idea of home—are the most powerful force behind architecture, yesterday and (especially) today. We are living in the most dramatic period in architectural history in more than half a century: a time when cityscapes are being redrawn on a yearly basis, architects are testing the very idea of what a building is, and

whole cities are being invented overnight in exotic locales or here in the United States. Now, in a bold and wide-ranging new work, Rowan Moore—former director of the Architecture Foundation, now the architecture critic for *The Observer*—explores the reasons behind these changes in our built environment, and how they in turn are changing the way we live in the world. Taking as his starting point dramatic examples such as the High Line in New York City and the outrageous island experiment of Dubai, Moore then reaches far and wide: back in time to explore the Covent Garden brothels of eighteenth-century London and the fetishistic minimalism of Adolf Loos; across the world to assess a software magnate's grandiose mansion in Atlanta and Daniel Libeskind's failed design for the World Trade Center site; and

finally to the deeply naturalistic work of Lina Bo Bardi, whom he celebrates as the most underrated architect of the modern era.

This reprint is a dramatic, fast-moving voyage from the dawn of civilization to the 21st century, celebrating and reminding us of the importance of the sun.

A thought-provoking consideration of how architecture, from a doorknob to a city plan, can influence human behavior How does the experience of turning a door handle, opening a door from one space into another, affect us? It is no wonder that the door, one of the most elemental architectural forms, has such metaphorical richness. But even on a purely physical human level, the cold touch of a brass handle or the swish of a sliding screen gives rise to an emotional reaction,

sometimes modest, occasionally profound. This book aims to understand how these everyday acts are influenced by architectural form, a concept that is vital for all architects to grasp. It considers how specifically built elements and volumes, taken from a wide array of buildings and settings around the world, can affect our powers of decision. From hand-carved stairs in Greek villages to free-floating catwalks, from the elegant processional steps of Renaissance Italy to Frank Lloyd Wright's masterly manipulation of form, all provide very different experiences of stepping from one level to the next, and all affect our experience of that space. Seamlessly integrating text and image, each chapter focuses on a different aspect of our daily interactions with architecture, looking at stairs, floors and paths, moving

and varied workings of architecture. They can be thought of as addenda to the foundation volume *Analysing Architecture*, which first appeared in 1997 and has subsequently been enlarged in three further editions. Examining these extra themes as a series of Notebooks, rather than as additional chapters in future editions, allows greater space for more detailed exploration of a wider variety of examples, whilst avoiding the risk of the original book becoming unwieldy. Shadows may be insubstantial but they are, nevertheless, an important element in architecture. In prehistoric times we sought shade as a refuge from the hot sun and chilling rain. Through history architects have used shadows to draw,
