

Army Generator Operator Course

The general purpose of this study was to deepen and broaden thinking about the nature and implications of possible Multi-Skilled Soldier (MSS) Concept implementation. Specific objectives were (1) to determine applicability of the MSS to the Stryker Brigade Combat Team (SBCT), as it might be implemented in Initial Entry Training (IET) and (2) to prototype MSS Concept implementation for the SBCT, considering possible implementation for the Future Force. The report also defines the MSS; shows how the MSS Concept might fit conceptually within a larger Army training, education, and professional development model for Soldiers of all ranks; offers an MSS Program design for IET; and crafts actionable recommendations regarding general MSS implementation for IET. The study concludes that the MSS Concept is fully applicable to the SBCT, as well as the so-called Current Force. It also concludes that MSS implementation would have a significant salutary effect on unit training readiness postures across the force. This study relied heavily on insights and analysis gained from interviews with groups of senior NCOs and officers within the 3rd Brigade (SBCT), 2nd Infantry Division, Ft. Lewis, WA, during September 2002.

The role of the military in the development of atomic energy is examined in this study of the U.S. Army's nuclear power program. Beginning with the Army's proposals to produce nuclear power plants for remote bases, Suid traces the complete history of this program. The initial struggles with the Atomic Energy Commission are fully detailed, as are the formal organization of the program, the building of a prototype nuclear plant, and the program's subsequent development and eventual decline. A list of suggested readings and a comprehensive index complete the volume.
