The purpose of the book is to present a comprehensive survey and analysis of the concept of self direction in learning, to trace its ideological roots, to examine its history, to explore its manifestations in various fields of education, and to provide some specific insights into strategies that may be used to induce or develop self direction in learners. Basically, then, the book is about the development and exercise of self directedness in learning, especially in adulthood. It celebrates individuality but at the same time recognises the essentially social nature of learning and of human existence. It attempts to reconcile and integrate ideas and practices - some very familiar and some quite novel - derived from many parts of the world, many domains and contexts of learning, and many historical periods. It is a tapestry woven from threads provided largely by others.

This text explains and synthesizes the functioning and relationships of numerous Defense, Joint, and Army organizations, systems, and processes involved in the development and sustainment of trained and ready forces for the Combatant Commanders. It is designed to be used by the faculty and students at the U.S. Army War College (as well as other training and educational institutions) as they improve their knowledge and understanding of "How the Army Runs." We are proud of the value that senior commanders and staffs place in this text and are pleased to continue to provide this reference.

Language in Action demonstrates the viability of mathematical research into the foundations of categorial grammar, a topic at the border between logic and linguistics. Since its initial publication it has become the classic work in the foundations of categorial grammar. A new introduction to this paperback edition updates the open research problems and records relevant results through pointers to the literature. Van Benthem presents the categorial processing of syntax and semantics as a central component in a more general dynamic logic of information flow, in tune with computational developments in artificial intelligence and cognitive science. Using the paradigm of categorial grammar, he describes the substructural logics driving the dynamics of natural language syntax and semantics. This is a general type-theoretic approach that lends itself easily to proof-theoretic and semantic studies in tandem with standard logic. The emphasis is on a broad landscape of substructural categorial logics and their proof-theoretical and semantic peculiarities. This provides a systematic theory for natural language understanding, admitting of significant mathematical results. Moreover, the theory makes possible dynamic interpretations that view natural languages as programming formalisms for various cognitive activities.

This book is part of the Army historical community's commemoration of the fiftieth anniversary of World War II. American victory in that conflict was brought about not only by the valor of our fighting men and the immensity of our productive capacity, but also by the availability of superb military intelligence. Much of this intelligence came from the ability of our armed forces to intercept and decipher the most secret communications of their adversaries. For many years security considerations prevented any public mention of these successes in the official histories. Now much of the story can be told. To preserve the memory of the Army's role in this intelligence war, the U. S. Army Center of Military History has joined with the History Office, U. S. Army Intelligence and Security Command (INSCOM), to publish this collection of documents on Army signals intelligence in World War II. INSCOM carries on the heritage of the Army's World War II Signal Security Agency, which by breaking the Japanese diplomatic ciphers and military codes helped speed the way of our forces to victory. The book is intended both for an Army audience and for the general public - including those World War II veterans who participated in the signals intelligence war and who for so many years were constrained to keep their contributions secret. The security barriers have now been lifted, and the Army is proud to acknowledge those contributions. Harold W. Nelson Charles F. Running barefoot isn't as natural as we're led to believe. Recent studies have shown that up to 85% of runners get injured every year, how natural is that? The most important question that running "barefoot" or "naturally" doesn't address is how we should run. Repetitive ground impact forces are at the root of most running injuries. A 30 minute jog can log more than 5,000 foot strikes; its because of this volume of movement that efficient

Ten Strategies of a World-Class Cyber Security Operations Center conveys MITRE's accumulated expertise on enterprise-grade computer network defense. It covers ten key qualities of leading Cyber Security Operations Centers (CSOCs), ranging from their structure and organization, to processes that best enable smooth operations, to approaches that extract maximum value from key CSOC technology investments. This book offers perspective and context for key decision points in structuring a CSOC, such as what capabilities to offer, how to architect large-scale data collection and analysis, and how to prepare the CSOC team for agile, threat-based response. If you manage, work in, or are standing up a CSOC, this book is for you. It is also available on MITRE's website, www.mitre.org.

The second part covers service-related information, geopolitics and national issues. KEY FEATURES • Simplified and reader-friendly approach towards all necessary steps: Screening Test, Psychological Test Series, Group Testing Series, Interview Techniques and Conference Procedure • Coverage of essential topics like Service-Related Information with Geopolitics and National Issues DR (CDR) N K NATARAJAN has an experience of over 25 years in the Indian Navy, and a three year stint as a Group Testing Officer at the Selection Center in Bhopal. In addition to serving in the navy, he also holds a degree in management and a doctorate in psychology. He has helped assess more than 1500 candidates during his term as a selection officer. ADP 6-22 describes enduring concepts of leadership through the core competencies and attributes required of leaders of all cohorts and all organizations, regardless of mission or setting. These principles reflect decades of experience and validated scientific knowledge. An ideal Army leader serves as a role model through strong intellect, physical presence, professional competence, and moral character. An Army leader is able and willing to act decisively, within superior leaders' intent and purpose, and in the organization's best interests. Army leaders recognize that organizations, built on mutual trust and confidence, accomplish missions. Every member of the Army, military or civilian, is part of a team and functions in the role of leader and subordinate. Being a good subordinate is part of being an effective leader. Leaders do not just lead subordinates-they also lead other leaders. Leaders are not limited to just those designated by position, rank, or authority.

The U.S. Army GHQ Maneuvers of 1941 is a masterful study of the largest military training exercises ever conducted by a military organization attempting to mobilize and modernize simultaneously during a rapidly changing international security environment. As suggested by Christopher R. Gabel, the maneuvers had an incalculable influence on the development of the American force structure in World War II, giving Army formations experience in teamwork and combined arms. Viewed by Army Chief of Staff George C. Marshall as the "combat college for troop leading" for the rising crop of field-grade officers, they also served to test emerging assumptions about doctrine, organization, and equipment. Gabel's work assumes its rightful place as an important and useful addition to the body of historical literature on military training. The evolution of training in the U.S. Army, particularly the linkage between maneuvers and changes in doctrine and organization, is worthy of reflection by military students and those with an interest in maneuvers as field laboratories for simulating large-scale engagements.

The United States Social Security Administration (SSA) administers two disability programs: Social Security Disability Insurance (SSDI), for disabled individuals, and their dependent family members, who have worked and contributed to the Social Security trust funds, and Supplemental Security Income (SSSI), which is a means-tested program based on income and financial assets for adults aged 65 years or older and disabled adults and children. Both programs require that claimants have a disability and meet specific medical criteria in order to qualify for benefits. SSA establishes the presence of a medically-determined impairment in individuals with mental disorders other than intellectual disability through the use of standard diagnostic criteria, which include symptoms and signs. These impairments are established largely on reports of signs and symptoms of impairment and functional limitation. Psychological Testing in the Service of Disability Determination considers the use of psychological tests in evaluating disability claims submitted to the SSA. This report critically reviews selected psychological tests, including symptom validity tests, that could contribute to SSA disability determinations. The report discusses the possible uses of such tests and their contribution to disability determinations. Psychological Testing in the Service of Disability Determination discusses testing norms, qualifications for administration of tests, administration of tests, and reporting results. The recommendations of this report will help SSA improve the consistency and accuracy of disability determination in certain cases.

The purpose of this text is to provide a reference for University level assembly language and systems programming courses. Specifically, this text addresses the x86-64 instruction set for the popular x86-64 class of processors using the Ubuntu 64-bit Operating System (OS). While the provided code and various examples should work under any Linux-based 64-bit OS, they have only been tested under Ubuntu 14.04 LTS (64-bit). The x86-64 is a Complex Instruction Set Computing (CISC) CPU design. This refers to the internal processor design philosophy. CISC processors typically include a wide variety of instructions (sometimes overlapping), varying instructions sizes, and a wide range of addressing modes. The term was retroactively coined in contrast to Reduced Instruction Set Computer (RISC3).

Determination of Stopping Sight Distances

Since the beginning of the Global War on Terrorism, the US Army Training and Doctrine Command (TRADOC) has

captured the experiences of Soldiers as they conducted difficult operations across the world in a variety of important ways. Historical accounts of the US Army's campaigns play a critical role in this process by offering insights from the past to assist Soldiers with their current—and future—operational challenges. This volume, A Different Kind of War, is the first comprehensive study of the US Army's experience in Afghanistan during the first 4 years of Operation ENDURING FREEDOM (OEF). The work focuses on Army operations in the larger Joint and Coalition campaign that evolved between October 2001 and September 2005. Beginning with a description of the successful offensive against the Taliban regime, launched in late 2001 in response to the attacks of 9/11, the book then shifts to the less well-understood campaign that began in 2002 to establish a peaceful and politically stable Afghanistan. A Different Kind of War is balanced and honest. Its publication is particularly timely as both the Army and the Department of Defense are beginning to reassess and restructure the campaign in Afghanistan. This study will shed a great deal of light on the overall course of OEF. As the title suggests, the campaign in Afghanistan was unique. While its initial phases featured the use of small teams of Special Operations Forces and air power, the campaign after 2002 evolved into a broader effort in which conventional forces were responsible for the creation of security, reconstruction, and programs to train the Afghan Army. Overall, the story in these pages is one of a relatively small number of Soldiers conducting multifaceted operations on difficult terrain and within a complex cultural environment. A Different Kind of War was written in recognition of all the men and women who served in Afghanistan to bring stability and prosperity to that country while protecting the security of the United States. Their experiences chronicled in this book will help inform and educate all those who serve the Nation today and in the future.
