What is Darwinism?

The Origin of Species Updated

Handbook of Pali Literature

Naturally Occurring Bioactive Compounds

In his new book, Steve Jones takes on the challenge of going back to the book of the millennium, Charles Darwin's *The Origin of Species*. Before *The Origin*, biology was a set of unconnected facts. Darwin made it into a science, linked by the theory of evolution, the grammar of the living world. It reveals ties between cancer and the genetics of fish, between brewing and inherited disease, between the sex lives of crocodiles and the politics of Brazil. Darwin used the biology of the nineteenth century to prove his case. Now, that science has been revolutionized and his case can be reargued using the twentieth century's astonishing advances. From AIDS to dinosaurs, from conservation to cloned sheep, bursting with anecdotes, jokes and irresistible facts, *Almost Like a Whale* is a popular account of the science that makes biology make sense. It will catch the millennial mood and tell all those for whom Darwin is merely a familiar name what he really meant. It exposes the Darwinian delusions which try (and fail) to explain human behaviour in evolutionary terms, and, while giving an up-to-date account of our own past, shows how humans are the first species to step beyond the constraints of biology.

Buku ini terdiri atas 14 bagian yang bertemali tematik tentang sastra, alam, dan kebudayaan.

An introduction to the history of genetics and the rethinking of evolutionism.

A Study of Conflict Over Marine Tenure in Kei Islands, Eastern Indonesia

Investigating Obsolescence

Definitive, concise, and very interesting... From William Shakespeare to Winston Churchill, the Very Interesting People series provides authoritative bite-sized biographies of Britain's most fascinating historical figures - people whose influence and importance have stood the test of time. Each book in the series is based upon the biographical entry from the world-famous Oxford Dictionary of National Biography.

This book is an ethnographic study of several coastal communities in the Kei Islands of eastern Indonesia. Central to Dr. Adhuri's argument is an insistence that systems of local marine resource management cannot be studied on their own, in isolation from either the complex cultural and historical conditions that give impetus to community action or from the equally complex regional and national contexts within which such action is undertaken.

Integrating words and pictures, this is a family reference book on evolution structured so that the individual themes of each spread make up a complete visual story and a self-contained module. On every spread there is a specially shot colour photograph of objects shown in real-life close-up detail

A biography of the naturalist disputes misconceptions, discussing how Darwin concealed his theory of evolution for twenty years, agonizing over its implications and the impact it would have on his social standing.

Indonesian Megaliths: A Forgotten Cultural Heritage

A Roadmap for Malaysia

A journey around the United States in search of the truth about the threat of earthquakes leads to spine-tingling discoveries, unnerving experts, and ultimately the kind of preparations that will actually help guide us through disasters. It's a road trip full of surprises. Earthquakes. You need to worry about them only if you're in San Francisco, right? Wrong. We have been making enormous changes to subterranean America, and Mother Earth, as always, has been making some of her own. . . . The consequences for our real estate, our civil engineering, and our communities will be huge because they will include earthquakes most of us do not expect and cannot imagine—at least not without reading Quakeland. Kathryn Miles descends into mines in the Northwest, dissects Mississippi levee engineering studies, uncovers the horrific risks of an earthquake in the Northeast, and interviews the seismologists, structural engineers, and emergency managers around the country who are addressing this ground shaking threat. As Miles relates, the era of human-induced earthquakes began in 1962 in Colorado after millions of gallons of chemical-weapon waste was pumped underground in the Rockies. More than 1,500 quakes over the following seven years resulted. The Department of Energy plans to dump spent nuclear rods in the same way. Evidence of fracking's seismological impact continues to mount. . . . Humans as well as fault lines built our "quakeland". What will happen when Memphis, home of FedEx's 1.5-million-packages-a-day hub, goes offline as a result of an earthquake along the unstable Reelfoot Fault? FEMA has estimated that a modest 7.0 magnitude quake (twenty of these happen per year around the world) along the Wasatch Fault under Salt Lake City would put a \$33 billion dent in our economy. When the Fukushima reactor melted down, tens of thousands were displaced. If New York's Indian Point nuclear power plant blows, ten million people will be displaced. How would that evacuation even begin? Kathryn Miles' tour of our land is as fascinating and frightening as it is irresistibly compelling.

Buku yang berjudul Ceritera Rakyat Daerah Sumatera Utara ini merupakan karya sastra Indonesia lama. Terdiri dari 20 cerita rakyat. Tim penulis naskah ini di daerah yang terdiri dari E. K. Siahaan, Burhanuddin Ch. Usman, Peraturen Sukapiring, Abu Bakar, Hayati Chalil, Amrizal Pulungan dan tim penyempurna naskah di pusat yang terdiri dari I.B. Mantra, Astrid S. Susanto, Budi Santoso, Singgih Wibisono, Ahmad Yunus

Includes a brief discussion of urban Aboriginal music; compares vigor of American Indian traditional music styles with loss of Aboriginal cultural traditions; anecdotal evidence from Adelaide.

THE STONE AGE OF INDONESIA

*This timely book provides an overview of natural products/botanicals used for the management of insect-pest and diseases. It will help readers to update and widen their knowledge about natural products and their bio-activities against plant pathogens. The volume explores activity, chemistry, toxicity and geographic distribution of plants. Discussions concerning the methodology used for the detection of active principles, their mode of action and commercial prospects are of utmost importance and worthy of note. Focuses on recent achievements in natural bio-actives Global coverage of natural products / plants Targets the most important issues of natural botanicals/ biocides Includes innovative ideas with lucid explanations Contains*

specialized chapters, such as, natural control of multi-drug resistant organisms, anti-salmonella agents, natural house-dust-mite control agents, and naturally occurring anti-insect proteins, etc. Covers research on bioactives: From Lab to Field and Field to Market Includes eco-friendly and economically viable herbal technology

Martin Gardner's entertaining anthology of writing on science brings together a host of famous names from science and literature including Einstein and Freud, R. L. Stevenson and G. K. Chesterton, Isaac Asimov and Stephen Jay Gould. The lively collection covers subjects as diverse as the laws of physics, logic, the bee, the sea, and the beautiful woman, and Gardner's intention is to spread before the reader a feast of great writing - essays that have something important to say about science and say it forcibly and well.'

Preserved on undated palm-leaf manuscripts, Old Sundanese texts are generally in poor condition and unavailable to a wider audience. There are limited texts in any form of Sundanese, and only limited knowledge of Old Sundanese. In presenting three long Old Sundanese poems, Noorduynd and Teeuw, in a heretofore unequalled English-language study of Old Sundanese literature, bring to the light works of importance for further linguistic, literary and historical research.

***Sociological theory has typically been studied in three types of courses: history of sociological thought, modern sociological perspectives, and philosophy of science. Theoretical Thinking in Sociology is a book that combines all three of these approaches and covers four main themes in sociological theory - exchange theory, functionalism, symbolic interaction and ethnomethodology. Although each theory takes a different approach to the task of explaining social order, all are presented with an emphasis on theoretical thinking. In addition to outlining these theories, the author describes in detail the theoretical problems faced by leading sociological theorists and their solutions to them, and presents theory as a creative intellectual development. The book reviews significant problems from the history of theory in sociology, and discusses research literature and the relationship of this research to its theoretical field. Each chapter of this 1979 second edition ends with a summary, topics for discussion, essay questions, and suggestions for further reading.***

*The 14th century Javanese epic poem, Sutasoma, relates the life of a prince, born an incarnation of the Jina-Buddha Wairocana. It follows his spiritual journey to enlightenment and his temporal journey through marriage, kingship and eventual victory over the mighty, world-threatening demon, Porusada. Kate O'Brien's new translation delivers to the reader a highly approachable and lively rendition of this Buddhist epic, comparable in both complexity and scale to that of the Ramayana, yet significantly less known or understood.*
