

## Ask The Experts

Infection with the influenza virus can have a serious effect on the health of people of all ages, although it is particularly worrisome for infants, the elderly, and people with underlying heart or lung problems. A vaccine exists (the "flu shot") that can greatly decrease the impact of influenza. Because the strains of virus that are expected to cause serious illness and death are slightly different every year, the vaccine is also slightly different every year and it must be given every year, unlike other vaccines. The Immunization Safety Review committee reviewed the data on influenza vaccine and neurological conditions and concluded that the evidence favored rejection of a causal relationship between influenza vaccines and exacerbation of multiple sclerosis. For the other neurological conditions studied, the committee concluded the evidence about the effects of influenza vaccine is inadequate to accept or reject a causal relationship. The committee also reviewed theories on how the influenza vaccine could damage the nervous system. The evidence was at most weak that the vaccine could act in humans in ways that could lead to these neurological problems.

This award-winning series DVD presents rarely-captured mother-to-mother advice in a fun, fast-paced, and fact-filled interactive group discussion with expert and educator mothers answering Frequently Asked Questions about breastfeeding. Invaluable information on breastfeeding from a variety of expert/experienced mother perspectives is presented, covering everything from the Benefits of Breastfeeding for Mother and Baby, Preparation, Getting Started, Strategies for Success, Problems and Solutions, Breastfeeding and Returning to Work, How to be Your Own Advocate, Legal Rights to Breastfeed in Public, and Much More. Breastfeeding FAQs: Ask the Experts is the perfect complementary video resource to the instructional DVDs in the award-winning Mother of 7 Birth and Breastfeeding Series: Breastfeeding Basics, Breastfeeding Intensive, and Breastfeeding Comprehensive. Breastfeeding FAQs: Ask the Experts, produced by Mother of 7, Inc., meets the WHO Code.

For going on two decades, Scientific American's "Ask the Experts" column has been answering reader questions on all fields of science. We've taken your questions from the basic to the esoteric and reached out to top scientists, professors and researchers to find out why the sky is blue or how planets acquire rings. Now, we've combed through our archives and have compiled some of the most interesting questions (and answers) into a series of eBooks. Organized by subject, each eBook provides short, easily digestible answers to questions on that particular branch of the sciences. The Human Body and Mind is the third eBook in this series, and it tackles questions about our own strange and mysterious biology. [Note: Health and medicine will be covered in a separate eBook.] Our experts field queries on evolution, bodily quirks and psychological feats. Have you ever wondered why humans lost their body hair? Curious about what causes a hangover? Or what makes that popping sound when we crack our knuckles? What about the oft-cited maxim that we only use 10 percent of our brains? Professors, scientists and biologists provide answers that are at once accurate, understandable and sometimes just plain funny.

Put More Cash In Your Pocket! Increase your chances of getting bigger Tips and Tipped more often. None Of Us Is As Smart As All Of Us. First released in the Spring of 1999, How People Learn has been expanded to show how the theories and insights from the original book can translate into actions and practice, now making a real connection between classroom activities and learning behavior. This edition includes far-reaching suggestions for research that could increase the impact that classroom teaching has on actual learning. Like the original edition, this book offers exciting new research about the mind and the brain that provides answers to a number of compelling questions. When do infants begin to learn? How do experts learn and how is this different from non-experts? What can teachers and schools do--with curricula, classroom settings, and teaching methods--to help children learn most effectively? New evidence from many branches of science has significantly added to our understanding of what it means to know, from the neural processes that occur during learning to the influence of culture on what people see and absorb. How People Learn examines these findings and their implications for what we teach, how we teach it, and how we assess what our children learn. The book uses exemplary teaching to illustrate how approaches based on what we now know result in in-depth learning. This new knowledge calls into question concepts and practices firmly entrenched in our current education system. Topics include: How learning actually changes the physical structure of the brain. How existing knowledge affects what people notice and how they learn. What the thought processes of experts tell us about how to teach. The amazing learning potential of infants. The relationship of classroom learning and everyday settings of community and workplace. Learning needs and opportunities for teachers. A realistic look at the role of technology in education.

The Model Rules of Professional Conduct provides an up-to-date resource for information on legal ethics. Federal, state and local courts in all jurisdictions look to the Rules for guidance in solving lawyer malpractice cases, disciplinary actions, disqualification issues,

sanctions questions and much more. In this volume, black-letter Rules of Professional Conduct are followed by numbered Comments that explain each Rule's purpose and provide suggestions for its practical application. The Rules will help you identify proper conduct in a variety of given situations, review those instances where discretionary action is possible, and define the nature of the relationship between you and your clients, colleagues and the courts.

Provides answers to a variety of questions about the world of science, providing a glimpse into everything from astronomy and biology to human anatomy and physiology, chemistry, physics, and zoology.

THE ESSENTIAL WORK IN TRAVEL MEDICINE -- NOW COMPLETELY UPDATED FOR 2018 As unprecedented numbers of travelers cross international borders each day, the need for up-to-date, practical information about the health challenges posed by travel has never been greater. For both international travelers and the health professionals who care for them, the CDC Yellow Book 2018: Health Information for International Travel is the definitive guide to staying safe and healthy anywhere in the world. The fully revised and updated 2018 edition codifies the U.S. government's most current health guidelines and information for international travelers, including pretravel vaccine recommendations, destination-specific health advice, and easy-to-reference maps, tables, and charts. The 2018 Yellow Book also addresses the needs of specific types of travelers, with dedicated sections on: · Precautions for pregnant travelers, immunocompromised travelers, and travelers with disabilities · Special considerations for newly arrived adoptees, immigrants, and refugees · Practical tips for last-minute or resource-limited travelers · Advice for air crews, humanitarian workers, missionaries, and others who provide care and support overseas Authored by a team of the world's most esteemed travel medicine experts, the Yellow Book is an essential resource for travelers -- and the clinicians overseeing their care -- at home and abroad.

**The guide that proves your meetings don't have to suck! There's a big dull elephant in the boardroom: this meeting! Most of the millions of meetings held in the world today are a monumental waste of time and talent. Worse still, most of the so-called solutions and books for boring meetings are twice as boring. Boring Meetings Suck provides tips and tactics to deliver "Get-In, Get-It-Done, or Get-Out" style meetings, while also tackling what most prefer to avoid; that you don't have to BE in charge of a meeting to TAKE charge of a meeting. This entertaining and take-no-prisoners guide is full of easily deployed SRDs?Suckification Reduction Devices?that will help you make your next meeting both efficient and effective. Empowers attendees to politely speak up and get a meeting back on track, or graciously get out, without being fired Shows how hosts can capitalize on technology, learning to crowd-source problems and increase participation Defines surefire methods to get meetings to start and end on time and not have the speaker read the slides STOPS over-invitation syndrome The author has appeared before many major corporate clients, and was named a "Top Business Professional Under 40" by American City Business Journals Your meetings do not have to bore, nor must they suck. Instead, get the winning techniques in Boring Meetings Suck, and make your meetings awesome in their engagement and productivity, or stop having them!**

**Provides answers to questions about various fields of science. Users can access archived information or ask questions of their own. Answers lead to related information and links to other pertinent web sites.**

**From the end of the Second World War through the U.S. Bicentennial, the National Endowment for the Arts, the Rockefeller Foundation, and the Ford Foundation granted close to \$300 million (approximately \$2.3 billion in 2017 dollars) in the field of music alone. In deciding what to fund, these three grantmaking institutions decided to "ask the experts," adopting seemingly objective, scientific models of peer review and specialist evaluation. They recruited music composers at elite institutions, professors from prestigious universities, and leaders of performing arts organizations. Among the most influential expert-consultants were Leonard Bernstein, Aaron Copland, Lukas Foss, and Milton Babbitt. The significance was two-fold: not only were male, Western art composers put in charge of directing large and unprecedented channels of public and private funds, but in doing so they also determined and defined what was meant by artistic excellence. They decided the fate of their peers and shaped the direction of music-making in this country. By asking the experts, the grantmaking institutions produced a concentrated and interconnected field of artists and musicians. Officers and directors utilized ostensibly objective financial tools like matching grants and endowments in an attempt to diversify and stabilize applicants' sources of funding, as well as the number of applicants they funded. Such economics-based strategies, however, relied more on personal connections among the wealthy and elite, rather than local community citizens. Ultimately, this history demonstrates how "expertise" served as an exclusionary form of cultural and social capital that prevented racial minorities and non-dominant groups from fully participating.**

This book tells a new story about patterns of public and private grantmaking from the 1950s to the 1970s, a period during which the United States witnessed a remarkable expansion in arts patronage.

Through archival documents, oral history, and ethnographic material, author Michael Sy Uy offers an in-depth analysis of grant-making practices, and highlights important and instructive issues concerning philanthropy, arts patronage, and musical production and consumption.

Did you ever walk out of class having even more questions than when you walked in? You may feel that way about History or Math, but what about your Sexual Health class (if you even had one)? If you're anything like most of the youth in America today, your head is probably spinning with a swirling, high-speed hurricane of questions. It is totally normal to be curious and to have questions about relationships, bodies, consent . . . you name it! But where can your average teen go to get all the reliable and accurate answers they need? In Case You're Curious (ICYC), a text-and-answer program conceived by Planned Parenthood, has been providing this educational service for teens for years. And now In Case You're Curious: Questions about Sex from Young People with Answers from the Experts is a big book of answers with funny and educational illustrations, to the most popular and most interesting questions young people have about birth control, development, sexually transmitted diseases, and so much more. Within these pages you will find non-judgmental (and fun!) answers meant to educate teens without the uncomfortable silence or weird eye contact often associated with "The Talk." With questions like "Does masturbating give you a disease?" and "Is the pineapple thing true?" In Case You're Curious isn't afraid to tackle the nitty-gritty questions you may think twice about raising your hand to ask in your Sexual Health class or at home.

The Public Health Foundation (PHF) in partnership with the Centers for Disease Control and Prevention (CDC) is pleased to announce the availability of Epidemiology and Prevention of Vaccine-Preventable Diseases, 13th Edition or "The Pink Book" E-Book. This resource provides the most current, comprehensive, and credible information on vaccine-preventable diseases, and contains updated content on immunization and vaccine information for public health practitioners, healthcare providers, health educators, pharmacists, nurses, and others involved in administering vaccines. "The Pink Book E-Book" allows you, your staff, and others to have quick access to features such as keyword search and chapter links. Online schedules and sources can also be accessed directly through e-readers with internet access. Current, credible, and comprehensive, "The Pink Book E-Book" contains information on each vaccine-preventable disease and delivers immunization providers with the latest information on: Principles of vaccination General recommendations on immunization Vaccine safety Child/adult immunization schedules International vaccines/Foreign language terms Vaccination data and statistics The E-Book format contains all of the information and updates that are in the print version, including: · New vaccine administration chapter · New recommendations regarding selection of storage units and temperature monitoring tools · New recommendations for vaccine transport · Updated information on available influenza vaccine products · Use of Tdap in pregnancy · Use of Tdap in persons 65 years of age

or older · Use of PCV13 and PPSV23 in adults with immunocompromising conditions · New licensure information for varicella-zoster immune globulin Contact bookstore@phf.org for more information. For more news and specials on immunization and vaccines visit the Pink Book's Facebook fan page

Collecting more than 60 articles written by Bonnie Miller Rubin for the Chicago Tribune between 2011 and 2014, Ask the Expert is a go-to source for questions about health and family. Each article in the series features an interview with a specialist, including a gerontologist, a clinical social worker, and a neuroscientist, among many others. The interviews are concise yet instructive, and Bonnie Miller Rubin's introductory commentary for each article combines helpful foundational information and snappy, engaging writing. Ask the Expert covers a wide variety of topics from cardiovascular troubles and women's hair loss to alternative medicine and avoiding children's mood swings. The first section of the book includes articles about health, covering areas such as aging, end-of-life care, brain health, cholesterol, medical advancements, and mental health. Also included are sections on nutrition, exercise, and weight loss, as well as pregnancy, parenting, and women's health. The final section of the book includes articles about lifestyle and family issues.

Technology and increasing levels of education have exposed people to more information than ever before. These societal gains, however, have also helped fuel a surge in narcissistic and misguided intellectual egalitarianism that has crippled informed debates on any number of issues. Today, everyone knows everything: with only a quick trip through WebMD or Wikipedia, average citizens believe themselves to be on an equal intellectual footing with doctors and diplomats. All voices, even the most ridiculous, demand to be taken with equal seriousness, and any claim to the contrary is dismissed as undemocratic elitism. Tom Nichols' The Death of Expertise shows how this rejection of experts has occurred: the openness of the internet, the emergence of a customer satisfaction model in higher education, and the transformation of the news industry into a 24-hour entertainment machine, among other reasons. Paradoxically, the increasingly democratic dissemination of information, rather than producing an educated public, has instead created an army of ill-informed and angry citizens who denounce intellectual achievement. When ordinary citizens believe that no one knows more than anyone else, democratic institutions themselves are in danger of falling either to populism or to technocracy or, in the worst case, a combination of both. An update to the 2017 breakout hit, the paperback edition of The Death of Expertise provides a new foreword to cover the alarming exacerbation of these trends in the aftermath of Donald Trump's election. Judging from events on the ground since it first published, The Death of Expertise issues a warning about the stability and survival of modern democracy in the Information Age that is even more important today.

Each month the editors of Diabetes Forecast publish answers to relevant questions submitted by readers. The answers, written by physicians, nurse practitioners, physician assistants, dietitians, diabetes educators, and other experts in the diabetes research and clinical communities, help people with diabetes and their loved ones live healthier lives with this chronic disease. Unlike most self-care titles for people with diabetes, the unique format of Ask the Experts creates an open forum for people to ask the specific and individualized questions that normally don't get answered. Questions like "Can I have sex while wearing an insulin pump?," "Will steroids affect my blood glucose levels?," "Can my blood glucose levels be too good?," "Should I start following a gluten-free diet?," and "Can I switch to insulin to lose weight?" finally get the professional, evidence-based answers they deserve. Like a personal consultation with the world's best diabetes healthcare team, Ask the Experts gives credible advice to the real-world questions people with diabetes actually have.

Reminding readers that collecting is as much about history and the pleasure of discovery, this resource also includes features about long undiscovered items, or items with interesting stories. The work provides the most accessible guide to identifying and assessing collectibles.DK

For going on two decades, Scientific American's "Ask the Experts" column has been answering reader questions on all fields of science. We've taken your questions from the basic to the esoteric and reached out to top scientists, professors and researchers to find out why the sky is blue or whether we really only use 10% of our brains. Now, we've combed through our archives and have compiled some of the most interesting questions (and answers) into a series of eBooks. Organized by subject, each eBook provides short, easily digestible answers to questions on that particular branch of the sciences. The first eBook in our series – Physics and Math – explains a wide range of natural phenomena and mathematical concepts. Have you ever wondered what exactly antimatter is? How about game theory, quantum mechanics and the origin of pi? Mathematicians and professors from universities across the country tackle these topics, drawing on their extensive expertise to give answers that are at once accurate and comprehensible by those who haven't studied physics or math since high school.
