Monitoring Progress and Improving Intervention for Infants and Young Children

Why, What, and How

As early childhood programs implement response to intervention, the Individual Growth and Development Indecators (IGDIs) will be the tool of choice for reliable, ongoing progress monitoring. That's why every program needs this book, the one-and-only guide to using the popular IGDIs accurately and efficiently. This book also helps early childhood professionals deepen their knowledge of child development in each of the five areas the IGDIs cover. They'll get concise, research-based summaries of how children develop skills in each area, how those skills affect child outcomes, and how the IGDl tools were custom developed to screen each area and detect small increments of progress. A must for infant-toddler and preschool specialists, this book will help professionals effectively track young children's progress, target interventions, and ensure measurable improvements in child outcomes.

In this important, entertaining book, one of the world's most celebrated psychologists, Martin Seligman, asserts that happiness can be learned and cultivated, and that everyone has the power to inject real joy into their lives. In Authentic Happiness, he describes the 24 strengths and virtues unique to the human psyche. Each of us, it seems, has at least five of these attributes, and can build on them to identify and develop to our maximum potential. By incorporating these strengths - which include kindness, originality, humour, optimism, curiosity, enthusiasm and generosity -- into our everyday lives, he tells us, we can reach new levels of optimism, happiness and productivity. Authentic Happiness provides a variety of tests and unique assessment tools to enable readers to discover and deploy those strengths at work, in love and in raising children. By accessing the very best in ourselves, we can improve the world around us and achieve new and lasting levels of authentic contentment and joy.

These creative, photocopiable learning activities address the same five developmental areas as ASQ (see page 42)—communication, gross motor, fine motor, problem solving, and personal-social. Besides helping children develop early language and literacy skills, these activities encourage close parent-child interactions. Parents and children will have a new set of games and interactions every 4 months between 1 month and 5 years, each set complete with a description of typical development and five to eight activities that help children progress in the key developmental areas. Fun, age-appropriate, and inexpensive, these learning activities are perfect for sharing with parents of children who are developing typically or need nonintensive support in one or more areas.

Finally, the book concludes with the editors' recommendations for future directions in interprofessional care for pediatric ASD. Topics featured in this book include: Autism screening tools and interdisciplinary coordination of the processes. Dell Children's (S)TAAR Model of Early Autism Assessment. This quick-guide introduces teachers to the 8 dimensions of CLASS and includes practical classroom tips and strategies for implementation.

The assessment of young children's development and learning has recently taken on new importance. Private and government organizations are developing programs to enhance the school readiness of all young children, especially children from economically disadvantaged homes and communities and children with special needs. Well-planned and effective assessment can inform teaching and program improvement, and contribute to better outcomes for children. This book affirms that assessments can make crucial contributions to the improvement of children's well-being, but only if they are well designed, implemented effectively, developed in the context of systematic planning, and are interpreted and used appropriately. Otherwise, assessment of children and programs can have negative consequences for both. The value of assessments therefore requires fundamental attention to their purpose and the design of the larger systems in which they are used. Early Childhood Assessment addresses these issues by identifying the important outcomes for children from birth to age 5 and the quality and purposes of different techniques and instruments for developmental assessments.

The COVID-19 pandemic has impacted all aspects of human existence—including the education sector. The pandemic has triggered a paradigm shift in the future of education, and thus, the current practices must transition to the "new normal." For better or for worse, the practices and technologies used within learning environments must drastically change in the aftermath of the COVID-19 pandemic. Policies and Procedures for the Implementation of Safe and Healthy Educational Environments: Post-COVID-19 Perspectives discusses the policies and procedures used in the implementation of safe and healthy educational environments both during and after the COVID-19 pandemic. It shares the best practices and presents the opportunity to learn from educator experiences in the time of crisis. Covering topics such as digital accessibility, healthy educational environments, and social-emotional development, this book is essential for educators in both K-12 and higher education settings, researchers, education administrators, policymakers, pre-service teachers, and academicians.

With this in-depth, easy-to-use tool, your program can reliably assess and monitor social-emotional development in infants, toddlers, and preschoolers at risk for delays or challenges. An ideal follow-up to screeners such as ASQ:SE, the two-part SEAM(TM) assessment reveals detailed qualitative information on children's social-emotional competence—and identifies their caregivers' strengths and areas of need. Easy to learn and implement, SEAM can be used by a wide variety of early childhood professionals, including those with little or no training in mental-health or behavioral interventions. SEAM helps your program support development of important social-emotional skills in order to minimize challenging behaviors build strong, proactive partnerships with families promote positive parent-child interactions in the critical first years of life assist with developing developmentally appropriate goals and intervention activities monitor child progress toward social-emotional goals SEAM is a two-part assessment; All forms are available in English and Spanish on the CD-ROM or e-book. SEAM Tool The main SEAM includes three intervals with different developmental ranges: Infant (2-18 months), Toddler (18-36 months), and Preschool (36-66 months). Each interval assesses 10 child benchmarks critical to social-emotional competence, including empathy, adaptive skills, self-image, emotional responses, and healthy interactions with others. SEAM is flexible enough to meet your specific needs—parents/caregivers can complete it independently, or you can conduct it jointly with them if they need extra guidance. The SEAM system also includes SEAM with Ages, an alternate version of the tool annotated with a helpful list of age ranges for each item. This version makes it easy to give caregivers general guidance on how social-emotional skills typically develop and where their child's development fits on the continuum. SEAM Family Profile The Family Profile assesses parent and caregiver strengths and helps identify areas in which they need more supports and resources to foster their child's social-emotional skills. Like the main SEAM, the Family Profile assessment includes three intervals—Infant, Toddler, and Preschool. Each interval measures four benchmarks key to a nurturing home environment: responding to needs, providing activities and play, providing predictable routines and an appropriate environment, and ensuring home safety. List of SEAM benchmarks Child participates in healthy interactions Child expresses a range of emotions Child regulates social-emotional responses Child begins to show empathy for others Child attends to and engages with others Child explores hands and feet and surroundings (for infants)/demonstrates independence (for toddlers/preschoolers) Child displays a positive self-image Child regulates activity level Child cooperates with daily routines and requests Child shows a range of adaptive skills View the webinar recording of Using the Social-Emotional Assessment/Evaluation Measure (SEAM(TM)) with Young Children, presented by Jane Squires, Ph.D., and Misti Waddell, M.S.
