western readers for the first time, with typical, traditional Chinese editions reproduced alongside the translation. The author provides an excellent overview of the tongue diagnosis theories in the major classics prior to the Yuan Dynasty (1271-1368), and discusses significant developments and publications. The Gold Mirror Records, first published in 1341, was a popular manual for centuries, appearing in many editions and variations. Tongue Reflections in Cold Damage, first published in 1668, developed the field of diagnosis as a whole by adopting the analysis of tongue colour as its main principle. Both texts are introduced with meticulous English translations and notes. This seminal text will give practitioners and students of Chinese medicine a sound

This book is organized around the 'four pillars' of TCM diagnosis: inspection, inquiry, listening and smelling, and palpation. In this text, each aspect is explained in a clear and systematic manner, with generous use of tables and illustrations. This is followed by a series of review questions for deeper understanding. A comprehensive self-examination consisting of 200 multiple choice questions, with a separate key to the answers, tests the reader's understanding of the important points of each aspect of diagnosis. These questions, many of which are presented in case study format, will help students prepare for the board exams.

In Chinese medicine, qi and blood are the most fundamental elements of the human body, and disorders affecting either of them can give rise to a variety of conditions. Dysfunctions or abnormalities of the channels, collaterals, and the various tissues and organs of the body are all related to changes in the qi and blood. Understanding and treating these disorders is therefore very important in clinical practice. Atlas of Blood and Qi Disorders in Chinese Medicine provides over a hundred vivid photographic

This book is an introduction to diagnosis and treatment through looking at the tongue. Modern tongue diagnostics combines traditional Chinese medical tongue diagnostics with bio-holographic theory, using the holographic reflections on the tongue to diagnose disease, thereby improving the accuracy of the diagnosis in terms of what and where the illness is. This book introduces in detail the theory of the tongue midline as well as the positions where various organs are reflected on the tongue, as well as the appearances of the tongue corresponding to various pathological changes in these organs. This book is the first

to publicize the author's many patented tongue diagnosis images, such as the panoramic hologram image which for the first time revealed the position and posture of the human body as it appears holographically on the tongue, the head and neck gland distribution image, the head and facial features map, and more. The author, aided by the experiences of previous scholars, discovered the position and posture of the human body as it appears holographically on the tongue. The holographic state of the human body as it appears on the tongue is in a prone position, that is, the head area is reflected at the tip of the tongue with the face facing forward, the legs and buttocks are reflected at the back of the tongue, and the four limbs are reflected in a bent position on the two sides of the

tongue. The author has discovered how the glands of the head and neck are mapped on the tongue, especially the map of the thyroid gland on the tongue, refuting the common belief about how the thyroid gland is reflected on the tongue. Contrary to common belief, the thyroid gland is not reflected on the two sides of the cervical vertebrae reflection area on the tongue, but instead is on the two sides of the upper jiao area (the upper third of the tongue). The author has determined the areas of the tongue where various organs are reflected, as well as the changes in tongue appearance corresponding to the diseases in these organs. For example, heart disease is often reflected on the tongue as cracks or sunken areas in the heart reflection area of the tongue. In many years of clinical experience using
