In most countries, parliament has the constitutional mandate to both oversee and hold government to account. In light of the increased focus on good governance, academics and legislative strengthening practitioners are re-examining parliament's oversight function with a view to increasing public financial accountability, curbing corruption, and contributing to poverty

As the country case studies in section III demonstrate, the accountability mechanisms or oversight tools available to the legislature vary based on constitutionally defined powers of the legislature, institutional arrangements between the branches of government, divisions of authority between national, regional, and local governments, the

Section II of this volume is devoted to examining budget oversight from the formulation and approval of the budget, to implementation and the ex post examination of the public accounts. Special attention is also paid to mechanisms to assist parliaments such as Public Accounts Committees and independent parliamentary

This book argues against many deeply ingrained practices ranging from journalistic detachment to framing stories via polar conflict in favor of greater civic involvement on the part of journalists. He also examines the particular challenges that public journalism poses to curriculum and instruction: how can journalism educators teach students to write stories useful and of concern to citizens, and how can they encourage citizens to publicly criticize news coverage of given topics? Following review of the major challenges and criticisms of public journalism, the author offers practical solutions for improving public

This book considers the

cultural meanings of death in American journalism and the role of journalism in interpretations and enactments of public grief, which has returned to an almost Victorian level. A number of researchers have begun to address this growing collective preoccupation with death in modern life; few scholars, however, have studied the central forum for the conveyance and construction of public grief today: news media. News reports

about death have a powerful impact and cultural authority because they bring emotional immediacy to matters of fact, telling stories of real people who die in real circumstances and real people who mourn them. Moreover, through news media, a broader audience mourns along with the central characters in those stories, and, in turn, news media cover the extended rituals. Journalism in a Culture of Grief examines this process through a

range of types of death and types of news media. It discusses the reporting of horrific events such as September 11 and Hurricane Katrina; it considers the cultural role of obituaries and the instructive work of coverage of teens killed due to their own risky behaviors; and it assesses the role of news media in conducting national, patriotic memorial rituals.

Online Communication provides an introduction to both the technologies

of the Internet Age and their social implications. This innovative and timely textbook brings together current work in communication, political science, philosophy, popular culture, history, economics, and the humanities to present an examination of the theoretical and critical issues in the study of computer-mediated communication. Continuing the model of the best-selling first edition, authors Andrew F. Wood and Matthew J.

Smith introduce computer-mediated communication (CMC) as a subject of academic research as well as a lens through which to examine contemporary trends in society. This second edition of Online Communication covers online identity, mediated relationships, virtual communities, electronic commerce, the digital divide, spaces of resistance, and other topics related to CMC. The text also examines how the Internet has

affected contemporary culture and presents the critiques being made to those changes. Special features of the text include:

****Hyperlinks--presenting greater detail on topics from the chapter *Ethical Ethical Inquiry--posing questions on the nature of human communication and conduct online***

****Online Communication and the Law--examining the legal ramifications of CMC issues Advanced undergraduates, graduate students, and researchers***

interested in the field of computer-mediated communication, as well as those studying issues of technology and culture, will find Online Communication to be an insightful resource for studying the role of technology and mediated communication in today's society.

This revision of Bloom's taxonomy is designed to help teachers understand and implement standards-based curriculums. Cognitive psychologists, curriculum specialists, teacher educators, and researchers have developed a two-dimensional framework, focusing on knowledge and cognitive processes. In combination, these two define what students are expected to learn in school. It explores curriculums from three unique perspectives—cognitive psychologists

century. The famous Linji (Rinzai) Chan master Dahui Zonggao (1089–1163) railed against "heretical silent illumination Chan" and strongly advocated kanhua (koan) meditation as an antidote. In this fascinating study, Morten Schlütter shows that Dahui's target was the Caodong (Soto) Chan tradition that had been revived and reinvented in the early twelfth century, and that silent meditation was an approach to practice and enlightenment that originated within this "new" Chan tradition. Schlütter has written a refreshingly accessible account of the

intricacies of the dispute, which is still reverberating through modern Zen in both Asia and the West. Dahui and his opponents' arguments for their respective positions come across in this book in as earnest and relevant a manner as they must have seemed almost nine hundred years ago. Although much of the book is devoted to illuminating the doctrinal and soteriological issues behind the enlightenment dispute, Schlütter makes the case that the dispute must be understood in the context of government policies toward Buddhism, economic factors, and social changes. He analyzes the remarkable

ascent of Chan during the first centuries of the Song dynasty, when it became the dominant form of elite monastic Buddhism, and demonstrates that secular educated elites came to control the critical transmission from master to disciple ("procreation" as Schlütter terms it) in the Chan School.

coherent and comprehensive overview of the state of the art. It represents the first synthesis of research in this broad and rapidly developing area. Selected topics are discussed in-depth, the goal being to establish fundamental techniques and methods as a basis for future research and development. Additional topics are treated at a survey level only, containing numerous pointers to the relevant literature. A roadmap for future research, based on open issues and challenges identified along the way, rounds out the book. The book is divided into three main parts, sandwiched between introductory and concluding

chapters. The first two chapters introduce readers to the basic concepts, provide an overview of entity-oriented search tasks, and present the various types and sources of data that will be used throughout the book. Part I deals with the core task of entity ranking: given a textual query, possibly enriched with additional elements or structural hints, return a ranked list of entities. This core task is examined in a number of different variants, using both structured and unstructured data collections, and numerous query formulations. In turn, Part II is devoted to the role of entities in bridging unstructured and structured data. Part III

explores how entities can enable search engines to understand the concepts, meaning, and intent behind the query that the user enters into the search box, and how they can provide rich and focused responses (as opposed to merely a list of documents)—a process known as semantic search. The final chapter concludes the book by discussing the limitations of current approaches, and suggesting directions for future research. Researchers and graduate students are the primary target audience of this book. A general background in information retrieval is sufficient to follow the material, including an understanding of basic probability

Noise pollution around airports, trains, and industries increasingly attracts environmental concern and regulation. Designers and researchers have intensified the use of large-eddy simulation (LES) for noise reduced industrial design and acoustical research. This 2007 book, written by 30 experts, presents the theoretical background of acoustics and of LES, followed by details about numerical methods, e.g. discretization schemes, boundary conditions, coupling aspects. Industrially relevant, hybrid RANS/LES techniques for acoustic source predictions are presented in detail. Many applications are featured ranging from simple geometries for mixing layers and jet flows to complex wing and car geometries.

This book has proved its worth over the years as a text for courses in Production Management at the Faculty of Automotive Engineering in Turin, Italy, but deserves a wider audience as it presents a compendium of basics on Industrial Management, since it covers all major topics required. It treats all subjects from product development and “make or buy”-decision strategies to the manufacturing systems setting

and management through analysis of the main resources needed in production and finally exploring the supply chain management and the procurement techniques. The very last chapter recapitulates the previous ones by analysing key management indicators to pursue the value creation that is the real purpose of every industrial enterprise. As an appendix, a specific chapter is dedicated to the basics of production management where all main relevant definitions, techniques and criteria are treated, including some numerical examples, in order to provide an adequate foundation

This Open Access book explores heritage conservation ethics of post conflict and provides an important historical record of the possible reconstruction of the Bamiyan Buddha statues, which was inscribed in the UNESCO World Heritage List in Danger in 2003 as “Cultural Landscape and Archaeological Remains of the Bamiyan Valley”. With the condition that most surface of

the original fragments of the Buddha statues were lost due to acts of deliberate destruction, this publication explores a reference point for conservation practitioners and policy makers around the world as they consider how to respond to ongoing acts of destruction of cultural heritage. Whilst there has been an emerging debate to the ethics and nature of heritage reconstruction, this volume provides a plethora of ideas and approaches concerning the future treatment of the Bamiyan Buddha statues. It also addresses a number of fundamental questions on potential heritage

reconstruction: how it will be done; who will decide; and what it should be done for. Moreover when it comes to the inscribed World Heritage properties, how can reconstructed heritage using non-original materials be considered to retain authenticity? With a view to serving as a precedent for potential decisions taken elsewhere in the world for cultural properties impacted by acts of violence and destruction, this volume introduces academic researches, experiences and observations of heritage conservation theory and practice of heritage reconstruction. It also addresses the issue not merely
