This book's over-riding aim is to provide a comprehensive and authoritative source of reference which defines the domain of accounting education/training, and which provides a critical overview of the state of this domain (including emerging and cutting edge issues) as a foundation for facilitating improved accounting education/training scholarship and research in order to enhance the

Thirty chapters, written by leading scholars from around the world, are grouped into seven themed sections which focus on different facets of their respective themes – including student, curriculum, pedagogic, and assessment considerations.

the significant changes auditing has undergone in recent years, due in large part to well-publicised corporate disasters such as Enron and Parmalat, which have shaken the profession. In response, many countries have replaced pre-existing domestic standards with International Standards on Auditing (ISAs) in an attempt to ensure that auditors throughout the world apply the same level of standards during all audit assignments, and that audit quality remains consistent on a global basis. International Standards on Auditing are frequently updated to improve and clarify their application throughout the audit and accounting profession. They

can be extremely complex and difficult to apply in real life situations. It is essential to apply the standards with sufficient rigor to enable an efficient audit to take place, to satisfy the regulators and ensure that the client receives an audit which is beneficial, cost effective, and which conforms to the prescribed framework; however, auditors are often criticised for failing to do so. Recognising that auditing is not always an exact science, and that in many cases the auditor is called upon to make a judgement in situations open to differing opinions, this book takes a practical and pragmatic approach to following International
