Local and Regional Natural Resources Management in Australia

Statistical Register of the Colony of Western Australia for ... and Previous Years

World Mapping Today

This is the only comprehensive account of all eight species in the genus *Adansonia*. It describes the historical background from the late Roman period to the present. It covers the extraordinary variety of economic uses of baobabs. There are also appendices on vernacular names, gazetteer, economics, nutrition and forest mensuration. This book fills a gap in the botanical literature. It deals with a genus that has fascinated and intrigued scientists and lay persons for centuries.

Individuals to Ecosystems

Australian Vegetation has been an essential reference for students and researchers in botany, ecology and natural resource management for over 35 years. Now fully updated and with a new team of authors, the third edition presents the latest insights on the patterns and processes that shaped the vegetation of Australia. The first part of the book provides a synthesis of

ecological processes that influence vegetation traits throughout the continent, using a new classification of vegetation. New chapters examine the influences of climate, soils, fire regimes, herbivores and aboriginal people on vegetation, in addition to completely revised chapters on evolutionary biogeography, quaternary vegetation history and alien plants. The book's second

half presents detailed ecological portraits for each major vegetation type and offers data-rich perspectives and comparative analysis presented in tables, graphs, maps and colour illustrations. This authoritative book will inspire readers to learn and explore first-hand the vegetation of Australia.

Originally published in 1964, this book presents a study of domestic capital formation in Australia from 1860 to 1900, a period of vigorous economic expansion. The text is divided into four main parts: the first discusses the conditions of Australian economic growth; the second is a historical analysis of private investment; the third studies investment in communications in relation to the public sector; the fourth investigates structural readjustment in the light of the end of expansion. Illustrative figures and numerous tables are also included. This book will be of value to anyone with an interest in Australian history and the development of the Australian economy.

Eucalypt Ecology

Reading and Comprehending

Investment in Australian Economic Development, 1861-1900

In Contested Country, leading researchers in planning, geography, environmental studies and public policy critically review Australia's environmental management under the auspices of the Natural Heritage Trust over the past decade, and identify the challenges that must be met in the national quest for sustainability. It is the first comprehensive, critical examination of the local and regional natural resources management undertaken in Australia, using research sourced from all states as well as the Northern Territory. It addresses questions such as: How is accountability to be maintained? Who is included and who is excluded in decentralised environmental governance? Does the scale of bottom-up management efforts match the scale of environmental problems? How is scientific and

technical fidelity in environmental management to be maintained when significant activities are devolved to and controlled by local communities? The book challenges some of the accepted benefits, assumptions and ideologies underpinning regional scaled environmental management, and is a must-read for anyone interested in this field.
