

## Autoskolla Progresi

Gabriel Garcia Marquez is a gifted writer, and nowhere does he write with the fervor that he does in "One Hundred Years of Solitude," a pleasurable ride unmatched in modern literature.

Islam Against the West

Sapiens

Over 30 years Ronald F. Duska has established himself as one of the leading scholars in business ethics. This book presents Duska’s articles the years on ethics, business ethics, teaching ethics, agency theory, postmodernism, employee rights, and ethics in accounting and the financial services industry. These reflect his underlying philosophical concerns and their application to real-world challenges – a method that might be called an Aristotelian common-sense approach to ethical decision making.

Cien Años de Soledad

Containing Sketches of Service in the South, and the Experience, Incidents and Observations Connected with Almost Two Years' Imprisonment at Johnson's Island, Ohio, where 3,000 Confederate Officers Were Confined

**Homo DeusA Brief History of Tomorrow**HarperCollins

**Contemporary Reflections on Business Ethics**

Official U.S. edition with full color illustrations throughout. NEW YORK TIMES BESTSELLER Yuval Noah Harari, author of the critically-acclaimed New York Times bestseller and international phenomenon Sapiens, returns with an equally original, compelling, and provocative book, turning his focus toward humanity’s future, and our quest to upgrade humans into gods. Over the past century humankind has managed to do the impossible and rein in famine, plague, and war. This may seem hard to accept, but, as Harari explains in his trademark style—thorough, yet riveting—famine, plague and war have been transformed from incomprehensible and uncontrollable forces of nature into manageable challenges. For the first time ever, more people die from eating too much than from eating too little; more people die from old age than from infectious diseases; and more people commit suicide than are killed by soldiers, terrorists and criminals put together. The average American is a thousand times more likely to die from binging at McDonalds than from being blown up by Al Qaeda. What then will replace famine, plague, and war at the top of the human agenda?

As the self-made gods of planet earth, what destinies will we set ourselves, and which quests will we undertake? Homo Deus explores the projects, dreams and nightmares that will shape the twenty-first century—from overcoming death to creating artificial life. It asks the fundamental questions: Where do we go from here? And how will we protect this fragile world from our own destructive powers? This is the next stage of evolution. This is Homo Deus. With the same insight and clarity that made Sapiens an international hit and a New York Times bestseller, Harari maps out our future.

Homo Deus

Shakib Arslan and the Campaign for Islamic Nationalism

***This book gives a unique perspective on the interwar history of the Middle East. By telling the life story of one man, it illuminates the political and cultural struggles of an era. Shakib Arslan (1869-1946) was a leading member of the generation of Ottoman Arabs who came to professional maturity just before the final defeat of the Ottoman Empire. Born to a powerful Lebanese Druze family, Arslan grew up perfectly suited to his time and place in history. He was one of the leading writers of his day and a dexterous, ambitious politician. But, by the end of World War I, Arslan and others of his generation found themselves adrift in a world no longer of their choosing, as the once great Ottoman state lay broken before the West. Rather than retreating from public life in those dark days, however, Arslan emerged militant in his opposition to Western encroachment on Islamic lands and tireless in his crusade to bring the organizing principles of a universalist Islam to the age of emerging nation-states. Organizer, pamphleteer, diplomat, spokesman, and symbol, Arslan became one of the dominant, and most controversial, Muslim political figures in the two decades between the wars. His involvements were so varied and intense that to study his life is to bring into focus all the major political issues and intellectual currents of the era. By the end of his career he was both praised and vilified, but he was arguably the most widely read Arab author of his day. Curiously, Arslan has received relatively little attention in English-language research. This may well be due less to his contemporary importance than to the perspective from which Western scholarship has viewed Middle Eastern intellectual history. Arslan was not one of the winners. For many his evocation of the old imperial ideal and his insistence on the strategic importance of Islamic ideals seemed to be simply archaic protest in a secular age. But this impeccably researched and beautifully written biography demonstrates the power and importance of Arslan's activist heritage, reinterpreting it for its own time and showing its importance for ours.***

**A Brief History of Humankind**

**A Brief History of Tomorrow**

***New York Times Bestseller A Summer Reading Pick for President Barack Obama, Bill Gates, and Mark Zuckerberg From a renowned historian comes a groundbreaking narrative of humanity’s creation and evolution—a #1 international bestseller—that explores the ways in which biology and history have defined us and enhanced our understanding of what it means to be “human.” One hundred thousand years ago, at least six different species of humans inhabited Earth. Yet today there is only one—homo sapiens. What happened to the others? And what may happen to us? Most books about the history of humanity pursue either a historical or a biological approach, but Dr. Yuval Noah Harari breaks the mold with this highly original book that begins about 70,000 years ago with the appearance of modern cognition. From examining the role evolving humans have played in the global ecosystem to charting the rise of empires, Sapiens integrates history and science to reconsider accepted narratives, connect past developments with contemporary concerns, and examine specific events within the context of larger ideas. Dr. Harari also compels us to look ahead, because over the last few decades humans have begun to bend laws of natural selection that have governed life for the past four billion years. We are acquiring the ability to design not only the world around us, but also ourselves. Where is this leading us, and what do we want to become? Featuring 27 photographs, 6 maps, and 25 illustrations/diagrams, this provocative and insightful work is sure to spark debate and is essential reading for aficionados of Jared Diamond, James Gleick, Matt Ridley, Robert Wright, and Sharon Moalem.
