cutting-edge researchers as contributors, the book provides a comprehensive account of the shift underway, examining in detail the complexities and intricacies involved with such a transition. The book first details the promises and problems of a green energy transition. Next, it explores the economic benefits that a comprehensive strategy toward a green energy economy might create. Then it investigates how communities will be affected and explores the social, cultural, and other changes that are likely to result. Finally, it explores the shift toward new technologies in-depth. Green Energy Economies concludes with policy options that support a transition to a better energy, environmental, and economic future. The contributors argue that a green energy economy offers great promise, but its realization will require making hard choices, and soon. They argue for investments in renewable energy and economic systems that can deliver a sustainable and equitable future. This book makes a forceful case for a green future.

Examining the Importance of the H-1B Visa to the American Economy

Where presidents or members of affluent families were previously seen, it is increasingly the case that car manufacturers are owned by banks and investment funds which have taken control of the entire economic life of these firms. This has significant impact on the terms of employment and layoffs, wages and precarious work, growing inequalities in income strata, compensation levels for executives, and the implementation of short-termist strategies across business operations. This book explores this increasing financialization – the predominance of the financial sector over the productive sector – in the automotive industry. In particular it is shown that the financial operations of these companies through leasing, insurance, loans, and other financial instruments is now much more profitable than the manufacturing aspects of the business, which was originally the *raison d'être*

for these firms. The chapters demonstrate how there are great demands to increase the return to shareholders as a main concern, despite other metrics and/or other stakeholders. The work studies the impact of financialization at the world's five largest automakers which together represent almost 50% of car production, providing an exploratory analysis of profitability, shareholder composition, compensation to executives, workers' salaries, dividend payments to shareholders, and employment. Encouraging debate on contemporary economy, this book marks a significant addition to the literature on financialization, contemporary forms of capitalism, labour and economic sociology more broadly.
