Sometime in the 1800s, three very different women (with twenty-first century affinities) sit in a fort sharing their views on life, love, and the hot nerd Louis Riel. This historical comedy shifts perspectives from the male gaze to women's power in the past and present through the lens of the Canadian Fur Trade.

Occupational Performance Coaching

Measurement in Medicine

This book presents a definitive guide to understanding, applying, and teaching Occupational Performance Coaching (OPC). Grounded in principles of occupational therapy, person-centredness, and interprofessional frameworks of health and disability, this book will be of interest across health and rehabilitation professions. Supporting people affected by disability to do well and live the life they want is the ultimate outcome of all rehabilitation

professionals, no matter where on the lifespan our clients sit. Coaching is increasingly recognised as highly effective in achieving this aim. This accessible manual provides case examples related to diverse health conditions alongside practitioner reflections. Uniquely, this manual presents coaching methods designed specifically for the rehabilitation environment. This book is a manual for practitioners, researchers, students, and lecturers interested in gaining a robust understanding of OPC methods, theoretical basis, and implementation. An e-Resource linked to the book provides access

This practical guide offers a comprehensive summary of the most important and most immediate therapeutic approaches in the assessment and treatment of burn injuries. Taking into account age-specific needs in pediatric, adult, and elderly burn patients, the book discusses key issues such as pre-hospital treatment, wound care and infection control, burn nursing, and critical care. Manual can be used by students and researchers at any level alongside any major statistics textbook. The leading figure in qualitative health research (QHR), Janice M. Morse, asserts that QHR is its own separate discipline—distinct from both traditional health research and other kinds of qualitative research—and examines the implications of this position for theory, research, and practice. She contends that the health care environments transform many of the traditional norms of qualitative research and shape a new and different kind of research tradition. Similarly, the humanizing ethos of qualitative health research has much to teach traditional researchers and practitioners in health

It considers the influence of other people and how the media affects thoughts and behaviours related to appearance. It explores the experiences of people living with a disfigurement in a society that seems to be increasingly focussed on appearance and the pursuit of an idealised image of beauty, size and weight.

Advances in trauma care have accelerated over the past decade, spurred by the significant burden of injury from the wars in Afghanistan and Iraq. Between 2005 and 2013, the case fatality rate for United States service members injured in Afghanistan decreased by nearly 50 percent, despite an increase in the

severity of injury among U.S. troops during the same period of time. But as the war in Afghanistan ends, knowledge and advances in trauma care developed by the Department of Defense (DoD) over the past decade from experiences in Afghanistan and Iraq may be lost. This would have implications for the quality of trauma care both within the DoD and in the civilian setting, where adoption of military advances in trauma care has become increasingly common and necessary to improve the response to multiple

Intentional steps to codify and harvest the lessons learned within the military's trauma system are needed to ensure a ready military medical force for future combat and to prevent death from survivable injuries in both military and civilian systems. This will require partnership across military and civilian sectors and a sustained commitment from trauma system leaders at all levels to assure that the necessary knowledge and tools are not lost. As the surgical community steps up to tackle the global burden of surgical disease in developing countries, Global Reconstructive Surgery is the first reference of its kind to offer focused, pertinent coverage of key areas surgeons need to understand to fully participate in this endeavor. It provides authoritative, real-world guidance on common surgeries performed around the world to help optimize outcomes in difficult environments and

for a variety of conditions. Offers practical wisdom and experience from surgeons who have lived and worked in challenging global settings. The clear, organized format is based on the way clinicians examine, prepare for, and treat patients in resource-limited circumstances. Each chapter matches the clinical pathway and thought processes of care delivery, from the clinical problem and pre-operative assessment to operative intervention, post-operative

care, and possible complications and options for management. Covers perioperative management, cleft and craniofacial surgery, hand surgery, burns, trauma, and key techniques commonly performed by surgeons across the globe. Includes the surgical steps of each procedure, photographs of clinical cases, and surgical pearls for resource-poor settings. Discusses alternative approaches related to cultural considerations and

unavailability of state-of-the-art equipment. Ideal for plastic surgeons, otolaryngologists, craniofacial surgeons, oral and maxillofacial surgeons, general surgeons – both those who volunteer for surgical trips and those training in local communities. This volume's purpose is to describe concepts and methods concerning assessment of health-related quality of life (HRQOL) in children and adolescents with a special focus on

chronic health conditions. The impetus for this book came from a recognition of the increasing importance of HRQOL assessments in the evaluation of treatment outcomes and the need to increase the utilization of HRQOL assessments in research and clinical applications with a range of pediatric populations. The need to develop a volume that describes new research and clinical applications concerning this topic stemmed from several recent

developments. There is a continuing need for evaluations of the efficacy of medical treatments for children and adolescents, including those with chronic health conditions. To address these critical unmet needs in the field of HRQOL assessment, and to advance scientific methods and clinical applications in this field, a conference was held at Case Western Reserve University. The conference set out to summarize current information

concerning the development and implementation of measures of HRQOL assessment, to identify and consider key conceptual and methodological issues in research concerning the measurement of HRQOL, and to recommend priorities to advance the state-of-the-art in research and clinical applications of QOL assessment in children and adolescents with chronic health conditions. This volume summarizes and synthesizes the

information that was presented by the conference participants in a series of lively discussions and chapters that were based on the presentations.
