Follow Grace, and her feline companion Boot, as they face their greatest fears!

The purpose of this handbook is to open the doors to the development and knowledge of the extrasensory faculties, giving each of you the keys to access intuitive, psychic and telepathic abilities in full autonomy, because you are all sensitive and endowed with these qualities, which are often attributed only to particular and fortunate groups of people. Rather, you are not yet aware of it and you have forgotten how to bring to your consciousness these precious powers, with which your ancestors lived in a completely spontaneous way. These activities are commonly referred to as "extra", in fact they are very normal quality of mind that everyone can access, without exception. It is only a matter of refining the subtle senses more so that we can take what exists beyond the boundaries of matter, beyond time and space. You will succeed through the many practical exercises focused on reading the Aura and The Subtle Bodies, the analysis of individual colours, telepathy, Second Sight in all its applications, bilocation, psychometry

of objects and the places, simple and effective exercises that you can do alone or in the company of friends with your own passion for the extrasensitive world. Not only that, but the development of psychic faculties will not remain an end in itself, because when you begin to transcend the limits of space and time, you will realize that you can tangibly take the greatest quality that most belongs to you rightfully: freedom. In fact, you will learn to take over your life, to act in the real world, because you will become aware of what is beyond the normal perception of the senses, realizing that the world as it appears is just a wishful thinking. You will come into contact with other dimensions, less concrete certainly, but no less real. You will walk in a new perception of reality, step by step, in which everything will seem to indicate that in life nothing will be as it seems or as it appears. You will regain your truest powers, because you will be more and more aware of your multidimensional Being. It will be your internal feelings that will play a decisive role in all these new experiences. It will be necessary to know how to listen to them, letting them flow freely, without judgment, to perceive their language, which can be composed of symbols, images, sounds, smells, which you will sense at another level, because the senses that will be used will be the subtle ones, not physical ones, to lead you to see, hear, smell, touch and taste all that does not appear in the sensitive world, but in the ultrasensitive one. I could have written this book in many ways, but I looked for the easiest and most direct way, so that it would reach everyone. For this reason, I tried not to

enter into considerations of an overly philosophical or spiritual character, which would have been my most natural way of expression, because I would have risked, perhaps, not to embrace even that part of readers anyway interested in learning to "sense the unseen." I am sure that all of you will be able to read and understand the messages between the lines of this book, to bring them on all levels and plans of existence, physical, emotional, intellectual and spiritual, so that you can achieve with lightness and extreme ease the life that you really want to live, without struggle and without effort, because you will have finally learned to enter the flow and let go of everything that weighs down and nullifies your life. Learning extrasensory faculties leads to surprising benefits as a natural consequence. First of all, a greater awareness of who you are and what you want to achieve, because by opening your mind and your heart to listening to what you perceive beyond the normal use of the senses, it will give you such clarity as to make you the true creators of your reality . You will be able to receive the answers you have wanted to receive for so long and too long. These are answers that will take you far along the path of your earthly life. You will soon realize that you are finally free of old mental habits, creating new and more productive habits, awakening from that long sleep to bring you to new levels of understanding and personal growth. You will notice how your creativity and imagination will increase, because extrasensory experiences go to stimulate areas of the brain that are not normally solicited and exploited in the course of daily life. One

recommendation: do not be tempted by skipping some chapters of the book to directly access the exercises, however very practical, detailed and attractive, because you would miss those basic and useful parts for the best success exercises themselves, which were presented not in random form, but in a very precise order. This journey from matter to the unseen will lead you into your deepest potentials, which wait for nothing more to be rediscovered and awakened, so that you can first-hand access the exploration of your true being, with full confidence in your unlimited potential. Then everything will be possible: to transcend time and space, to overcome the limits of matter, exploring firsthand faculties that you did not even think you had, beyond all expectations, making you finally aware that what lives beyond matter, a world of invisible energies, it had always been waiting for you. Dolly Parton isn't just a country music superstar. She has built an empire. At the heart of that empire is Dollywood, a 150-acre fantasy land that hosts three million people a year. Parton's prodigious talent and incredible celebrity have allowed her to turn her hometown into one of the most popular tourist destinations in America. The crux of Dollywood's allure

is its precisely calibrated Appalachian image, itself drawn from Parton's very real hardscrabble childhood in the mountains of east Tennessee. What does Dollywood have to offer besides entertainment? What do we find if we take this remarkable place seriously? How does it both confirm and subvert outsiders' expectations of Appalachia? What does it tell us about the modern South, and in turn what does that tell us about America at large? How is regional identity molded in service of commerce, and what is the interplay of race, gender, and class when that happens? In *Gone Dollywood*, Graham Hoppe blends tourism studies, celebrity studies, cultural analysis, folklore, and the acute observations and personal reflections of longform journalism into an unforgettable interrogation of Southern and American identity.

Drawing on both lived experience and cultural memory, Norma Dunning brings together six powerful new short stories centred on modern-day Inuk characters in Tainna.

Ranging from homeless to extravagantly wealthy, from spiritual to jaded, young to

elderly, and even from alive to deceased, Dunning's characters are united by shared feelings of alienation, displacement and loneliness resulting from their experiences in southern Canada. In *Tainna*—meaning “the unseen ones” and pronounced *Da-ey-nn-a*—a fraught reunion between sisters Sila and Amak ends in an uneasy understanding. From the spirit realm, Chevy Bass watches over his imperilled grandson, Kunak. And in the title story, the broken-hearted Bunny wanders onto a golf course on a freezing night, when a flock of geese stand vigil until her body is discovered by a kind stranger. Norma Dunning's masterful storytelling uses humour and incisive detail to create compelling characters who discover themselves in a hostile land where prejudice, misogyny and inequity are most often found hidden in plain sight. There, they must rely on their wits, artistic talent, senses of humour and spirituality for survival; and there, too, they find solace in shining moments of reconnection with their families and communities.

In *Beep*, David Wanczyk illuminates the sport of blind baseball to show us a remarkable version of America's pastime. With balls tricked out to squeal three times per second, and with bases that buzz, this game of baseball for the blind is both innovative and intense. And when the best beep baseball team in America, the Austin Blackhawks, takes on its international rival, Taiwan Homerun, no one's thinking about disability. What we find are athletes playing their hearts out for a championship. Wanczyk follows teams around the world and even joins them on the field to produce a riveting inside narrative about the game and its players. Can Ethan Johnston, kidnapped and

Will Taiwan's rookie MVP Ching-kai Chen—whose superhuman feats on the field have left some veterans suspicious—keep up his incredible play? And can Austin's Lupe Perez harness his competitive fire and lead his team to a long-awaited victory in the beep baseball world series? Beep is the first book about blind baseball.

internationally bestselling and critically acclaimed novel The Passage, Justin Cronin constructed an unforgettable world transformed by a government experiment gone horribly wrong. Now the scope widens and the intensity deepens as the epic story surges forward . . . In the present day, as the man-made apocalypse unfolds, three strangers navigate the chaos. Lila, a doctor and an expectant mother, is so shattered by the spread of violence and infection that she continues to plan for her child's arrival even as society dissolves around her. Kittridge, known to the world as "Last Stand in Denver," has been forced to flee his stronghold and is now on the road, dodging the infected, armed but alone and well aware that a tank of gas will get him only so far. April is a teenager fighting to guide her little brother safely through a landscape of death and ruin. These three will learn that they have not been fully abandoned—and that in connection lies hope, even on the darkest of nights. One hundred years in the future, Amy and the others fight on for humankind's salvation . . . unaware that the rules have changed. The enemy has evolved, and a dark new order has arisen with a vision of the future infinitely more horrifying than man's extinction. If the Twelve are to fall, one of those united to vanquish them will have to pay the ultimate price. Death and the Moving Image

Peter Byrne tells the story of Hugh Everett III (1930-1982), whose "many worlds" theory of multiple universes has had a profound impact on physics and philosophy. Using Everett's unpublished papers (recently discovered in his son's basement) and dozens of interviews with his friends, colleagues, and surviving family members, Byrne paints, for the general reader, a detailed portrait of the genius who invented an astonishing way of describing our complex universe from the inside. Everett's mathematical model (called the "universal wave function") treats all possible events as "equally real", and concludes that countless copies of every person and

thing exist in all possible configurations spread over an infinity of universes: many worlds. Afflicted by depression and addictions, Everett strove to bring rational order to the professional realms in which he played historically significant roles. In addition to his famous interpretation of quantum mechanics, Everett wrote a classic paper in game theory; created computer algorithms that revolutionized military operations research; and performed pioneering work in artificial intelligence for top secret government projects. He wrote the original software for targeting cities in a nuclear hot war; and he was one of the first scientists to recognize the danger of nuclear winter. As a Cold Warrior, he designed logical systems that modeled "rational" human and machine behaviors, and yet he was largely oblivious to the emotional damage his irrational personal behavior inflicted upon his family, lovers, and business partners. He died young, but left behind a fascinating record of his life, including correspondence with such philosophically inclined physicists as Niels Bohr, Norbert Wiener, and John Wheeler. These remarkable letters illuminate the long and often bitter struggle to explain the paradox of measurement at the heart of quantum physics. In recent years, Everett's solution to this mysterious problem - the existence of a universe of universes - has gained considerable traction in

scientific circles, not as science fiction, but as an explanation of physical reality.
