Since the internet speeds went above the 500kpbs mark, the number of things people can do with their interconnected devices skyrocketed. Automated homes, connected cars, and internet enabled TVs. The latter is what threatens to revolutionize the entertainment world as we know it, do away with cable TV and abolish the need for expensive blue-ray players. Even though smart TVs are so lucrative, most people find them either too costly, or limiting. The alternative would be going for a TV with an HDMI port, a USB port and purchasing a dongle to bring in internet TV. ChromeCast is one of the best and cheapest such tools in the market.

Factually, the principal finding of this book is that the trade policy reforms introduced by Peru in the 1990s have continued over several changes of president, whereas similar reforms in Argentina have been reversed. In both countries, the reforms included the introduction of new mechanisms for managing trade policy as well as the reduction of restrictions. Throughout the decade beginning in 2000, Peru's liberalization expanded. The new institutions became more robust, and through them pressures for protection were effectively contained. At the same time, Argentine trade policy returned to the high-protection import substitution regime in place before the 1990s reforms. Multiple restrictions have been imposed, mostly through a reversion to informal methods that abjure the governance characteristics that the 1990s reforms introduced. The difference between the two cases cannot be explained by economic parameters such as resource endowments or external shocks. Peru's reforms manifest the buoyant and confident attitude toward the global economy that reform leaders were able to introduce into Peruvian politics. In the words of former president Alan García, there is an eagerness to “climb up on the wave of growth.” In comparison, Argentina's current development strategy sees international trade as detrimental to Argentina's interests unless participation by Argentine buyers and sellers is guided by government intervention. The Peruvian case provides examples of successfully managing the politics of reform and the technical aspects of policy so as to establish transparent and participatory processes that weigh accurately the impact of trade policy on all affected domestic parties. The Argentine case demonstrates that the World Trade Organization legal system is not an effective restraint on a government that wants to revert to an import substitution regime. International cooperation has been useful when it has recognized and influenced domestic sovereignty over economic regulation; however, it is not been useful when approached as a matter of international regulation of national actions.

This book deals with the current crises from a somewhat different the usual perspectives. It claims that causes and policy implications of these crises cannot be properly assessed by focusing on allocative efficiency or income growth alone; it requires a more general approach, based on social costs. It does not deal with social costs according to the Pigouvian or the Coasian traditions.

It draws on the work of Original Institutional Economics (OIE) such as Thorstein Veblen, Karl William Kapp, and Karl Polanyi, on Post-Keynesians such as Hyman Minsky and, in general, on authors who have provided insights beyond the conventional wisdom of economic thought.
