Annual Report of the Secretary of the State Board of Agriculture and Annual Report of the Experiment Station

This report of the Interagency Task Force on Oil Shale examines the prospects for expanding shale oil production to meet the objectives of Project Independence. The study considers production potential; resource requirements such as human, money, and material resources; production constraints; and actions needed to accelerate development. The report also deals with economic factors in increased development of oil shale production; oil shale resource base and ownership; leasing requirements and policy; water demand, supply and quality; air quality analysis; impact on fish and wildlife; and the status of technology.

A practical text suitable for an introductory or advanced course in formal methods, this book presents a mathematical approach to modelling and designing systems using an extension of the B formal method: Event-B. Based on the idea of refinement, the author's systematic approach allows the user to construct models gradually and to facilitate a systematic reasoning method by means of proofs.

Readers will learn how to build models of programs and, more generally, discrete systems, but this is all done with practice in mind. The numerous examples provided arise from various sources of computer system developments, including sequential programs, concurrent programs and electronic circuits. The book also contains a large number of exercises and projects ranging in difficulty. Each of the examples included in the book has been proved using the Rodin Platform tool set, which is available free for download at www.event-b.org.
