Explains how cars work, answers questions about repair problems, and tells how to prolong the life of a car

This book examines how ancient authors explored ideas of kingship as a political role fundamental to the construction of civic unity, the use of kingship stories to explain the past and present unity of the polis and the distinctive function or status attributed to kings in such accounts. It explores the notion of kingship offered by historians such as Herodotus, as well as dramatists writing for the Athenian stage, paying particular attention to dramatic depictions of the unique capabilities of Theseus in uniting the city in the figure of the 'democratic king'. It also discusses kingship in Greek philosophy: the Socratics' identification of an 'art of kingship', and

Xenophon and Isocrates' model of 'virtue monarchy'. In turn, these allow a rereading of explorations of kingship and excellence in Plato's later political thought, seen as a critique of these models, and also in Aristotle's account of total kingship or pambasileia, treated here as a counterfactual device developed to explore the epistemic benefits of democracy. This book offers a fascinating insight into the institution of monarchy in classical Greek thought and society, both for those working on Greek philosophy and politics, and also for students of the history of political thought. This book constitutes the proceedings of the 13th International Conference on Transport Systems Telematics, TST 2013, held in Katowice-Ustron, Poland, in October 2013. The 58 papers included in this volume were carefully

They provide an overview of solutions being developed in the field of intelligent transportation systems, and include theoretical and case studies in the countries of conference participants. Over the last several decades, gearing development has focused on improvements in materials, manufacturing technology and tooling, thermal treatment, and coatings and lubricants. In contrast, gear design methods have remained frozen in time, as the vast majority of gears are designed with standard tooth proportions. This over-standardization signif

As part of its BMW H2R research project, Studio Olafur Eliasson is preparing a dense publication comprising

extensive visual material; excerpts from two seminars held in 2006/07; and conversations between Olafur Eliasson and a number of distinguished thinkers, such as architect and artist Yona Friedman, urban theorist Bart Lootsma, and Head of Design BMW Christopher Bangle. In the research project, Eliasson raises questions of formgiving and materiality, mobility, temporality, movement, and renewable energy. The aim is not so much to examine the car as object, as to integrate the vehicle in a complex set of social, historical, political, and economic relations. In 2005 a BMW H2R hydrogen-powered vehicle was delivered to Studio Olafur Eliasson and then stripped bare of its outer shell. To create a new skin several form studies have been carried out

This book includes the carefully edited contributions to the United Engineering Foundation Conference: The Aerodynamics of Heavy Vehicles: Trucks, Buses and Trains held in Monterey, California from December 2-6, 2002. This conference brought together 90 leading engineering researchers discussing the aerodynamic drag of heavy vehicles. The book topics include a comparison of computational fluid dynamics calculations using both steady

and unsteady Reynolds-averaged Navier-Stokes, large-eddy simulation, and hybrid turbulence models and experimental data obtained from wind tunnel experiments. Advanced experimental techniques including three-dimensional particle image velocimetry are presented as well, along with their use in evaluating drag reduction devices.

This book describes the discusses advanced fuels and combustion, emission control techniques, after-treatment systems, simulations and fault diagnostics, including discussions on different engine diagnostic techniques such as particle image velocimetry (PIV), phase Doppler interferometry (PDI), laser ignition. This volume bridges the gap between basic concepts and advanced research in

This book provides a savvy survey of the latest work by designers, craftspeople, and architects of African descent around the world. Artists and designers of African ancestry-many in Africa but also others throughout Europe, the Americas, and the Far East-are working in a wide array of mediums: fashion, architecture, non-traditional crafts, design, fine art, and

photography. Authors Lowery Stokes Sims and Leslie King-Hammond, together with six contributors, challenge presumptions of what constitutes an 'African' style or aesthetic, and demonstrate the power and expressive potential of materials, textures and forms. Work by well-known artists such as Yinka Shonibare, MBE and architects including David Adjaye appear alongside those of lesser-known but equally exciting designers whose garments,

The book, after giving an introduction to automobile aerodynamics and some fundamentals of fluid mechanics, covers topics such as the performance and aerodynamics of different kinds of vehicles, as well as test techniques for their aerodynamics. The book also covers other concepts related to automobiles such as cooling systems and ventilations for vehicles. The text is recommended for mechanical engineers and physicists in the automobile industry who would like to understand more about aerodynamics of motor vehicles and its importance on the field of road safety and automobile production.
