Major progress has been made in the field of driveshafts since the authors presented their first edition of this unique reference work. Correspondingly, major revisions have been done for second edition of the German Textbook (Springer 2003), which is present here in the English translation. The presentation was adjusted, novel improvements of manufacturing and design are described, and modern aspects of production are incorporated. The design and application of Hooke ' s joint driveshafts is discussed as well as constant velocity joints for

Antistatic sprays from several different manufacturers are examined. The sprays are examined for contamination potential (i.e., outgassing and nonvolatile residue), corrosiveness on an aluminum mirror surface, and electrostatic effectiveness. In addition, the chemical composition of the antistatic sprays is determined by infrared spectrophotometry,

mass spectrometry, and ultraviolet spectrophotometry. The results show that 12 of the 17 antistatic sprays examined have a low contamination potential. Of these sprays, 7 are also noncorrosive to an aluminum surface. And of these, only 2 demonstrate good electrostatic properties with respect to reducing voltage accumulation; these sprays did not show a fast voltage dissipation rate however. The results indicate that antistatic sprays can be used on a limited basis where contamination potential, corrosiveness, and electrostatic effectiveness is not

two generations of the 3-series: the E36 and E46 generations. By the start of the 1990s, the sports sedan was an established car type, just like the muscle car, minivan or SUV. This is thanks to BMW which created the class with its first two generations of the 3-series. Every other car company had to have one, especially makers of upscale automobiles. Therefore, BMW had its hands full when it came time to create the third rendition of this class-creating car. So the company went out and boldly designed and built a completely new car, the E36, as the third generation of 3-series is called.

The car reached a note of perfection in looks, handling and choices. This was despite the huge corporate problems BMW was having at the time. The fourth generation of the 3-series, the E46 was much more of a subtle change from the E36. This bit with BMW's philosophy of only making radical changes to its cars every other generation. Although not much different looking on the outside, the newer generation 3-series now had even more features and options for the sports sedan buyer.
