As part of its BMW H2R research project, Studio Olafur Eliasson is preparing a dense publication comprising extensive visual material; excerpts from two seminars held in 2006/07; and conversations between Olafur Eliasson and a number of distinguished thinkers, such as architect and artist Yona Friedman, urban theorist Bart Lootsma, and Head of Design BMW Christopher Bangle. In the research project, Eliasson raises questions of formgiving and materiality, mobility, temporality, movement, and renewable energy. The aim is not so much to examine the car as object, as to integrate the vehicle in a complex set of social, historical, political, and economic relations. In 2005 a BMW H2R hydrogen-powered vehicle was delivered to Studio Olafur Eliasson and then stripped bare of its outer shell. To create a new skin several form studies have been carried out in a temporary geodesic dome, constructed in the yard of the studio. The final surface of the car consists of layers of ice, frozen around two intricate nets, mirrored plates and light. The a oeClimate cara can only exist in a microclimate with a temperature of minus 6 degrees Celsius or below.

The work provides novel methods to process inertial sensor and acoustic sensor data for road condition estimation and monitoring with application in vehicles, which serve as sensor platforms. Furthermore, methods are introduced to combine the results from various vehicles for a more reliable estimation.

*An exclusive look at one of the world's most successful and controversial companies, and the mysterious family behind it. BMW is arguably the most admired carmaker in the world. It's financial performance is the envy of its competitors, and BMW products inspire near-fanatical loyalty. While many carmakers struggle with falling sales, profits and market share, demand for BMWs continues to grow, frequently outpacing production. Now, David Kiley-Detroit Bureau Chief at USA Today and author of *Getting the Bugs Out*, which covered Volkswagen's demise and rebirth, goes inside the fabled German automaker to see how it does what it does so well. With unprecedented access to BMW executives, Kiley goes behind the walls of BMW's famed "Four Cylinders" headquarters in Munich at a time when the company is in its most aggressive, and some say riskiest, expansion in its history and when*

some of the company's new products, like the 7 Series sedan and Z4 roadster, are for the first time drawing as many barbs from critics as bouquets. Kiley covers intimate details of the boardroom drama surrounding the company's nearly disastrous acquisition and subsequent sale of the British Rover Group and its expansion into selling MINI and Rolls Royce cars. Besides being a world-class carmaker, BMW is also considered one of the smartest consumer marketing companies and Kiley explores the extraordinary value and management of the BMW brand mystique. He also takes a revealing look at the mysterious and ultra-private Quandt family of Bad Homburg Germany, which owns a controlling stake in BMW: Johanna and Susanne Quandt, two of the wealthiest women in Europe and Stefan Quandt, one of the wealthiest bachelors on the continent. David Kiley (Ann Arbor, MI) is the Detroit Bureau Chief at USA Today who has covered the auto industry for 17 years. He has been featured on Nightline, CNBC, CNN, MSNBC, NPR and the Today show. He is also the author of Getting the Bugs Out: The Rise, Fall, and Comeback of Volkswagen in America (0-471-26304-4), also available from Wiley.

BMW's M5 was a simple concept: a production 5 Series saloon re-developed for high performance by the Motorsport division. The M5 was the car that really initiated the legend of the M-cars from BMW; the letter M had been applied to a high-performance BMW as early as 1978, but that year's M1 was an exotic supercar. It had the right image, but the M1 was never going to bring in major profits. The M5 was much simpler in concept. It was and remains a production 5 Series saloon, redeveloped for ultra-high performance. Manufacturing costs were minimized, allowing BMW to price the car more attractively and still bring in healthy profits. This new book charts the development of the M5 across five generations. For all fans of the BMW M5, this book provides essential background, and is packed with the facts and details that make the M5 legend come alive. The M5 is still in production and remains the benchmark high-performance saloon wherever it is sold. This is essential background reading for all BMW M5 fans and motoring enthusiasts and is superbly illustrated with 211 colour photographs.

Autocar

Since the invention of automobiles, there were sporty cars and there were practical cars. BMW engineers dared to design a car with features of both. In doing so, they created one of the classic cars of all time, the 3-Series. For over 40 years, this model has given its owner the joy of everyday driving. The commute to work suddenly was as much fun as track day. Follow the story of this category-creating car from the origins of its maker as a World War I airplane engine manufacturer until the hugely successful car it is today. This is the first of three books about the history of the 3-Series. It tells the tale of a failing German

car company unable to find its way after World War II. A last-minute loan gave BMW one last chance. The company used that opportunity to create the Neue Klasse generation of cars in which we find the genetic origins of the 3-Series. In the 1970s, the world was reacting to a severe oil-shortage. Introduced just at this right time was the practical but sporty first generation of 3-Series, the E21. With the introduction of the E30, the second generation of the 3-Series, BMW took the success of this two-door coupe and ran with it, creating sedans, wagons, all-wheel drive vehicles and the M3 supercar.
