Human error is implicated in nearly all aviation accidents, yet most

investigation and prevention programs are not designed around any theoretical framework of human error.

Appropriate for all

levels of expertise, the book provides the knowledge and tools required to conduct a human error analysis of accidents, regardless of operational setting (i.e. military, commercial, or

general aviation).
The book

Widely disseminated among military and civilian organizations, HFACS encompasses all aspects of human error, including the conditions of

operators and elements of supervisory and organizational failure. It attracts a very broad readership.

Specifically, the book serves as the main textbook for a course in aviation accident

University of
Illinois. This book
will also be used
in courses
designed for
military safety
officers and flight

Additionally, the
