The Report on Unidentified Flying Objects, written by Captain Edward Ruppelt in 1956, was the first serious, unbiased account written about UFOs by anyone connected with the official government investigations of UFO phenomena. Ruppelt, who coined the term "unidentified flying objects" and headed Project Blue Book from 1951 to 1953, includes his personal investigations and findings in his extensive research on UFOs. He discusses both well-publicized UFO sightings and lesser-known accounts, as well as the inner workings of Air Force UFO research. This edition is the original 1956 edition; in 1960 Ruppelt released a second edition which seemed to weaken his original views that some UFO reports could not be explained, and reinforce the Air Force's position that there was nothing mysterious about UFOs. EDWARD J. RUPPELT (1923-1960) was the head of Project Blue Book during the Korean War, from 1951-1953. He served at the Air Technical Intelligence Center, where he took over Project Grudge, a formal investigation by the U.S. military with the goal of debunking extraterrestrial and UFO activity. Under Ruppelt's supervision, the project, later named Blue Book, experienced its most fruitful years, when investigations were properly conducted without judgment or disdain. Many UFO researchers hail him as a pioneer of UFO research and hero in the fight to earn respectability for the field.
I type "International Teaching Jobs" on the Google search line and find myself looking at a long list of teaching jobs all over the world. "Here's a job in the Congo," I tell my wife, Chantal. "Africa!!!?" "Yea... really. They want a calculus teacher! I can do that!" "Okay," Chantal says tentatively. "If you want." I hit the submit button and my resume is off across the world. What follows are four action-packed years of living, working and traveling in sub-saharan Africa. This book chronicles the second, third and fourth years of these adventures, including the day-to-day life of a teacher at The American School of Kinshasa from 2007-2009 who deals with a marginal infrastructure while facing the everyday challenges of living in a war-torn third-world country, and has some great adventures in South Africa, Kenya, Ghana, Uganda and Zanzibar. This is the sequel to the book, Calculus in the Congo, Book 1.
BISHOPS RESOLUTION RESOLUTION 167-1962 was first established within the frame work of International Accords Documents for the purpose of establishing a special unit, comprising of not more than two individuals for the sole purpose of retrieving information on the actions of belligerent forces that was not attainable by traditional means. The unit was to only engage in informational acquisition determined by the superior officer and at the discretion of the Embassy Director. When this directive was written, no one ever thought they would have a man like Corporal Bishop attached to such a unit, but Major Tennyson thought he was the perfect man for the job. Bishop and his mates have driven headlong down the path that leads to destruction, at least for one freight house and a printing press thats being used to make counterfeit MPC to be shipped to the South to ruin its economy. And along the way the question arises, how does an East German get a newspaper article from the Wichita Gazette telling a story of something that happens in the South? New allegiances, a bunch of bad guys and a few turns make up this tale of intrigue. And yes, something to laugh at.

This book tells you what the US Government failed to report about UFOs. It explains where the UFOs come from, what they are doing here, and exposes the United States antigravity (UFO) vehicles. The book gives the history of UFOs along with biblical and modern UFO reports. It gives the locations of the best places to view UFOs, and how the antigravity propulsion system of a UFO works. The author is neither for nor against the belief in UFOs, and merely lays out the details of UFO incidences so that the reader can decide in the validity of the phenomena.

www.MyAirlineYears.comBook 2Allow me to introduce myself, again. My name is Leenie P. McPhearson. I worked for a major, US Airline for over 16 years, and I am proud of my career. Several years ago, I had my first interest in writing my story, and why not? I have complied notes throughout the years, and there are so many memories that will remain with me forever. Reliving this part of my life story has had a real impact on me for sure, and it has certainly taken its toll; I laughed, I cried and I remembered.My goal is to tell behind-the-scene actual events. This is only the beginning, as I have already started on My Airline Years, Book 2. Pilots and flight attendants do have a unique vocation. However, I thought you might find an insider's look at their behaviors of interest. Airline crews are living the dream of fast travel, international destinations, sexual freedom, meeting the rich and famous, private parties, and so much more; I am thankful for having saved so many memories throughout the years. As aviation expands, airplanes will become much larger, and the number of flight attendants on every aircraft will increase. Stories like mine will certainly become rarer, and sadly the time spent with individual passengers will decrease. All of the names are fictitious, but certainly not the characters. The names were changed to protect the guilty! The pictures are professional, but they are not of any actual person in my story. Needless to say, I loved my years working as a flight attendant. Thank you for flying along with me through these 18 Chapters. I hope it will be a thrill ride with more to come.

Updated for iOS 7 and Xcode 5 Review ""I have spent a small fortune on beginner programming books that have consistently left me scratching my head. I've often wondered if I just didn't have the ability to learn and grasp the subject. But, in this book I've found the answer; I can."" - TL Pearce Unleash Your Inner App Developer This second book in the series from Kevin McNeish, winner of the 2012 Publishing Innovation Award, highly acclaimed iOS trainer and conference speaker, and award-winning App Developer, is specifically designed to teach non-programmers Objective-C; the language used to create Apps for the iPhone and iPad. Many books designed for the beginning Apple developer assume way too much. In contrast, this book series assumes you know nothing about programming. Book 2: Flying with Objective-C builds on what you learned in Book 1: Diving In. In the first two chapters, the author helps you understand basic concepts, such as "what is a class?" and "what is an object?" You then learn how to pass messages to objects, and then create your own custom classes. As you go through the book, concepts become more advanced until you reach the final chapters on Advanced-Objective-C and Advanced Messaging. Each concept is accompanied by step-by-step instructions to build an App that shows the real-world use of Objective-C programming features. This is a tremendous aid in helping non-programmers grasp even more advanced concepts. The information in this book is applicable to the latest iOS technologies including iOS 7 and Xcode 5. Includes Step-by-Step Instructional Videos Each exercise in this book has a corresponding movie that demonstrates how to perform the exercise. After trying to solve the exercise on your own, just tap the movie to watch the exercise solved for you in high quality video and narrative Not a "Dumbed Down" Series Ultimately, readers will learn everything that is taught in the regular written-for-programmer books. This series simply provides more background information and more thorough explanations for those who haven't had formal education or a career in software development.

Like the Great Pyramid, mysteries surround the other pyramids as well as other features found at the Giza plateau in Egypt. For example: Why does the second pyramid have two entrances, both off center, while the single entrance to the third pyramid is centered? What was the purpose of the two lower chambers in the second pyramid? Moreover, why was the sarcophagus in this pyramid made to be wider than the passages that lead to the upper chamber? In a related matter, why were the bones of a bull placed in the sarcophagus? And why was the sarcophagus sunk into the floor up to its lid? At the third pyramid, why were parts of a body dating to the Christian period wrapped in a coarse yellow woolen cloth and buried beneath three feet of rubbish in the upper chamber? Why in the third pyramid was the lower vaulted chamber designed so that it would absorb both sound and light? Out on the plateau, what was the purpose of the so-called trial passages? On the south side of the Great Pyramid, why was an ancient boat dismantled and buried in a pit east of that pyramids north-south axis? And what was stored in the other pit west of the axis? Do the four so-called air shafts in the Great Pyramid link the three major pyramids together? And how are the compartments above the Kings Chamber related to the end time? David Furlong, author of The Keys to the Temple, says the whole of the Giza complex was based on a coherent design intended to portray a spiritual theme (page 89). Volume 2 of Books Written in Stone: Enoch the Seer, the Pyramids of Giza, and the Last Days provides the evidence to support this thesis.

The Symposium on Swimming and Flying in Nature which was held at the California Institute of Technology, Pasadena, California from July 8-12, 1974 was conceived with the objective of providing an interdisciplinary forum for the discussion of funda mental biological and fluid mechanical aspects of these forms of natura110comotion. It was the earnest hope of all concerned in the organization of the Symposium that the exchange of knowledge and interaction of ideas from the disciplines involved would stimu late new research in this developing field. If the liveliness of the discussion generated among the 250 or so participants is any measure, then this objective was fulfilled to a significant degree. These two companion volumes contain the manuscripts of the papers presented during the Symposium. It is hoped that this permanent record will serve to perpetuate the enthusiasm and active thought generated during those days in Pasadena. The first volume contains the proceedings of the first two days of the confer ence (Sessions I to IV) which concentrated on the locomotion of micro-organisms. The second volume (Sessions V to VIII) deals with the propulsion of larger fish, insects and birds. Professor Sir James Lighthill's Special Invited Lecture which opened the Symposium is contained in the second volume, rather than the first, since it deals with natural flight.

A surprising collection of writings on the subject of UFOs and alien abduction challenges serious scientists to explore this field, presenting the various recurring themes and unsoved puzzles surrounding our fascination with these unexplained phenomena.

UFOs and Abductions

After the attack by the Gnols, Earth lies in ruins with most of the cities destroyed and the majority of the population dead. Adrian Palmer remains in the custody of the Gnols who have established their capital in Washington D.C. as they await the arrival of their savior, Koroan Chast. Knowing full well of their forthcoming execution, Adrian and Kevin find help from a group of rebels gathering in Missouri. Adrian knows that he needs to return to Terrest. But before he can escape, he and Kevin must face an old enemy, which could be futile. On Terrest, Jake and Scott are left to lead what's left of the Terrestrian military. Defeated and desperate, Jake and Celeste embark on an insurmountable journey to Gnolom to discover the true origins of Koroan Chast's power. At the same time, Skip discovers new and old allies to help him in his escape from the slave camp of Zikf. Will he escape to continue his quest for the prophecy given by Jesus Christ? Or, is Koroan Chast the fulfillment of that prophecy?

Introduction to Flight Testing Introduction to Flight Testing Provides an introduction to the basic flight testing methods employed on general aviation aircraft and unmanned aerial vehicles Introduction to Flight Testing provides a concise introduction to the basic flight testing methods employed on general aviation aircraft and unmanned aerial vehicles for courses in aeronautical engineering. There is particular emphasis on the use of modern on-board instruments and inexpensive, off-the-shelf portable devices that make flight testing accessible to nearly any student. This text presents a clear articulation of standard methods for measuring aircraft performance characteristics. Topics covered include aircraft and instruments, digital data acquisition techniques, flight test planning, the standard atmosphere, uncertainty analysis, level flight performance, airspeed calibration, stall, climb and glide, take-off and landing, level turn, static and dynamic longitudinal stability, lateral-directional stability, and flight testing of unmanned aircraft systems. Unique to this book is a detailed discussion of digital data acquisition (DAQ) techniques, which are an integral part of modern flight test programs. This treatment includes discussion of the analog-to-digital conversion, sample rate, aliasing, and filtering. These critical details provide the flight test engineer with the insight needed to understand the capabilities and limitations of digital DAQ. Key features: Provides an introduction to the basic flight testing methods and instrumentation employed on general aviation aircraft and unmanned aerial vehicles. Includes examples of flight testing on general aviation aircraft such as Cirrus, Diamond, and Cessna aircraft, along with unmanned aircraft vehicles. Suitable for courses on Aircraft Flight Test Engineering. Introduction to Flight Testing provides resources and guidance for practitioners in the rapidly-developing field of drone performance flight test and the general aviation flight test community.

This textbook arms the reader with powerful techniques of Modern TRIZ self-training and real problem solving. It is designed as a simple and efficient, step-by-step crash course in primary TRIZ models based on the author's methods of extraction and reinvention, or retrieval of invention models from any real-life objects. Special content addresses the psychological support of the person during problem solving and promotion of the new idea to realization. The book introduces the so-called Theory of Developing the Creative Personality (TDCP), initiated but not completed by Genrikh Altshuller, father of TRIZ and TDCP. The textbook continues to develop a simple standard model presentation of the problem solving process with a four-step Meta-Algorithm of Invention (MAI) T-R-I-Z.
