Over the past decade, the prospect of climate change resulting from anthropogenic CO2 has become a matter of growing public concern. Not only is the reduction of CO2 emissions

extremely important, but keeping the cost at a manageable level is a prime priority for companies and the public, alike. The CO₂ capture project (CCP) came together with a common goal in mind: find

of the natural environment without destroying the national economy. It then reviews a range of possible solutions. The book delves into key normative concepts that undergird American perspectives on nature by providing an overview of philosophical

Get Free Bre Global Test Report

concepts found in the western intellectual tradition, the presuppositions inherent in neoclassical economics, and anthropocentric (human-centered) and biocentric (earth-centered) positions on sustainability. It traces the evolution of attitudes about

Get Free Bre Global Test Report

nature from the time of the Ancient Greeks through Europeans in the Middle Ages and the Renaissance, the Enlightenment and the American Founders, the nineteenth and twentieth centuries, and up to the present. Building on this foundation, the author examines the

political landscape as non-governmental organizations (NGOs), industry leaders, and government officials struggle to balance industrial development with environmental concerns.

context of "green" claims, he recasts the issue in a way that provides a cohesive look at all sides. This effort may be quixotic, but how else to cut the Gordian knot? Hempcrete is a versatile, energy-efficient natural insulation material, useful for walls, roofs

Business retention
and expansion (BRE)
is regarded as the
most practical and
accessible method for
economic
development at the
city, town, or
neighborhood scale.
This comprehensive
volume centers on the
belief that BRE is the

top responsibility for a community economic development official. BRE is an asset-based approach designed to systematically strengthen the connection between businesses and the community while encouraging each business to continue operations and

expand in the community. It focuses on the community's existing businesses instead of those it doesn't have. This book illustrates many different facets of BRE, from big-picture and theory to lessons learned about BRE from practitioners and academics with diverse perspectives

and backgrounds.

The authors demonstrate diverse ways of reaching out and responding to existing businesses. They explore several topics related to or at the very heart of BRE including: business clusters, entrepreneurship, community outcomes, business assistance,

transportation systems, energy efficiency, business succession, and defining BRE success. These include research, program evaluation, and case studies. This book offers both theoretical and applied points of views, and will be of great interest to local

practitioners, state/provincial officials, and students of economic development. It was originally published as a special issue of the journal *Community Development*.

This book presents human factors research focused on achieving and assessing

sustainability in the built environment and architecture. It reports on advanced engineering methods for architecture and design, and on assessments of the social, environmental, and economic impacts of various designs and projects. The book covers a broad range of

practical studies relating to ergonomic design and assessment of public and private places, urban ecological constructions, and urban planning for smart city. Further topics include green area planning, environmentally-responsive architecture, and conservation and
