Building Electrical Installation

Residential, Commercial and Industrial Electrical Systems is a comprehensive coverage on every aspect of design, installation, testing and commissioning of electrical systems for residential, commercial and industrial buildings. This book would serve as a ready reference for electrical engineers as well as bridge the gap between theory and practice, for students and academicians, alike. Vol. 2: Network and Installation provides its readers all the pertinent aspects of network and installation of electrical systems from project procedure, rules and standards to design principles and installation practice. Containing over 100 illustrations, this book discusses: Project execution; Coordination issues with power companies; Estimating power demand for installation; Estimating capital cost of illustration; Selection of appropriate network ;Planning space required for installation of equipment and consequently the installation of the equipment.
This highly successful book is now updated in line with the 18th Edition of the Wiring Regulations. Electrical Installation Work provides a topic by topic progression through the areas of electrical installations, including how and why electrical installations are designed, installed and tested. Additional content in this edition includes detail on LED lighting and medical locations. A new appendix contains a glossary of electrical installation work terms, ensuring that readers of all levels of experience can easily grasp every topic. Brian Scaddan ' s subject-led approach makes this a valuable resource for professionals and students on both City & Guilds and EAL courses. This approach also makes it easy for those who are learning the topic from scratch to get to grips with it in a non syllabus-led way. The book is already widely used in education facilities across the UK. It has been published for almost 40 years, and in its current form since 1992.
Continuously in print since 1952, Modern Wiring Practice has now been fully revised to provide an up-to-date source of reference to building services design and installation in the 21st century. This compact and practical guide addresses wiring systems design and electrical installation together in one volume, creating a comprehensive overview of the whole process for contractors and architects, as well as electricians and other installation engineers. Best practice is incorporated throughout, combining theory and practice with clear and accessible explanation, all within the framework of the Wiring Regulations. Introducing the fundamentals of design and installation with a minimum of mathematics, this book is also relevant reading for all students of electrical installation courses, such as the 2330 Certificate in Electrotechnical Technology, and NVQs from City & Guilds (including 2356, 2391 and 2382 awards), as well as trainees in industry undertaking Apprenticeships and Advanced Apprenticeships. This new edition incorporates the latest thinking on sustainability and the environment and is fully up-to-date with the 17th Edition of the IEE Wiring Regulations. Illustrations have been completely updated to show current best practice and are now in full colour. Reviews of a previous edition: ' This book has long been a favourite of mine. Its regular updating by the issue of new editions ensures it is always completely up to date with the requirements of electrical installation. It is a book that I would thoroughly recommend to any person with an involvement in our industry for it is without doubt one of the very best available, written in a clear and readily understandable manner. ' Electrical Contractor ' Refreshingly practical. This book will prove useful to anyone involved in the design and installation of electrical systems: from the apprentice to the architect. ' Electrical Review
Electrical Installations and Regulations
According to IEC International Standards
Electrical Installation
National Electrical Code
Electrical Installation Work: Level 3
The book provides step-by-step guidance on the design of electrical installations, from domestic installation final circuit design to fault level calculations for LV systems. Amendment 3 publishes on 5 January 2015 and comes into effect on 1 July 2015. All new installations from this point must comply with Amendment 3 to BS 7671:2008. Updated to include the new requirements in Amendment 3 to BS 7671:2008, the Electrical Installation Design Guide./I> reflects important changes expected to: * Definitions throughout the Regulations * Earth fault loop impedances for all protective devices
The Building Services Handbook summarises concisely, in diagrams and brief explanations, all elements of building services. Practice, techniques and procedures are clearly defined with supplementary references to regulations and relevant standards. This is an essential text for all construction/building services students up to undergraduate level, and is also a valuable reference text for building service professionals. This new book is based on Fred Hall's 'Essential Building Services and Equipment 2ed' and has been thoroughly updated throughout. It is a companion volume to the highly popular textbook 'Building Construction Handbook' by Chudley and Greeno, which is now in its fourth edition.
Everything needed to pass the first part of the City & Guilds 2365 Diploma in Electrical Installations Updated in line with the 3rd Amendment of the 17th Edition IET Wiring Regulations, this new edition covers the City & Guilds 2365-02 course. Written in an accessible style with a chapter dedicated to each unit of the syllabus, this book helps you to master each topic before moving on to the next. End of chapter revision questions enable learners to check their understanding and consolidate key concepts learnt in each chapter. With a companion website containing videos, animations, worksheets and lesson plans this resource will be invaluable to both students and lecturers alike. The eighth edition contains: Full-colour diagrams and photographs to explain difficult concepts Clear definitions of technical terms to make the book a quick and easy reference Extensive online material to help both students and lecturers The companion website material is available at www.routledge.com/cw/linsley
Model of the Electrical Installation Process in Building Construction
Calculations for Electricians and Designers
Introduction to Electrical Installation Work
EAL Edition
Building Services Design
Updated in line with the 18th Edition of the Wiring Regulations and written specifically for the EAL Diploma in Electrical Installation, this book has a chapter dedicated to each unit of the EAL syllabus, allowing you to master each topic before moving on to the next. This new edition also includes a section on LED lighting. End of chapter revision questions help you to check your understanding and consolidate the key concepts learned in each chapter. A must have for all learners working towards EAL electrical installations qualifications.
This title provides all the information the reader will need to pass the City & Guilds level 2 diploma in electrical installations.
This textbook covers all the material you need to pass the first part of the new City & Guilds 2357 Diploma in Electrotechnical Technology. Aligned with the 17th edition IEE Wiring Regulations, this new edition has been thoroughly updated to cover the 'performance' section of the latest 2357 course. Written in an accessible style and with a separate chapter for each unit, this book helps you to master each topic before moving on to the next. End of chapter revision questions help you to check your understanding and consolidate the key concepts learned in each chapter. With associated online animations and instructional videos to further support your learning, this is the text that no electrical installations student should be without. Also available: Basic Electrical Installation Work 6th edition Trevor Linsley ISBN: 9780080966281
Basic Electrical Installation Work 2365 Edition
Standard for Commissioning Building Electrical Systems
Network and installation
The Electrical Installation Material Industry in Transition
A Text Book of Design of Electrical Installations
Electrical Installations and Regulations focuses on the regulations that apply to electrical installations and the reasons for them. Topics covered range from electrical science to alternating and direct current supplies, as well as equipment for providing protection against excess current. Cables, wiring systems, and final subcircuits are also considered, along with earthing, discharge lighting, and testing and inspection. Comprised of 12 chapters, this book begins with an overview of electrical installation work, traits of a good electrician, and the regulations governing installations. The reader is then introduced to electrical science, with emphasis on the theory of electricity; the difference between direct current and alternating current; and the mains equipment that provide protection against excess current such as fuses and circuit breakers. Subsequent chapters focus on various types of cables; wiring systems and the regulations governing them; earthing and protection of the earthing system; and machine installation, protection, and control. Secondary batteries and systems with extra-low voltage are also described. This monograph will be of interest to electricians, electrical engineers, and students of electrical engineering courses.
Brian Scaddan's Electrical Installation Work explains in detail how and why electrical installations are designed, installed and tested. You will be guided in a logical, topic by topic progression through all the areas required to complete the City and Guilds 2357 Diploma in Electrotechnical Technology. Rather than following the order of the syllabus, this approach will make it easy to quickly find and learn all you need to know about individual topics and will make it an invaluable resource after you've completed your course. With a wealth of colour pictures, clear layout, and numerous diagrams and figures providing visual illustration, mastering difficult concepts will be a breeze. This new edition is closely mapped to the new City and Guilds 2357 Diploma and includes a mapping grid to its learning outcomes. It is also fully aligned to the 17th Edition Wiring Regulations. Electrical Installation Work is an indispensable resource for electrical trainees of all ability levels, both during their training and once qualified. Brian Scaddan, I Eng, MIET, is a consultant for and an Honorary Member of City and Guilds. He has over 35 years' experience in Further Education and training. He is Director of Brian Scaddan Associates Ltd, an approved City and Guilds and NICEIC training centre offering courses on all aspects of Electrical Installation Contracting including the City and Guilds 2382, 2391, 2392, 2377 series and NICEIC DISQ courses. He is also a leading author of books on electrical installation.
A practical and highly popular guide for electrical contractors of small installations, now fully revised in accordance with the latest wiring regulations The book is a clearly written practical guide on how to design and complete a range of electrical installation projects in a competitive manner, while ensuring full compliance with the new Wiring Regulations (updated late 2008). The updated regulations introduced changes in terminology, such as 'basic' and 'fault protection', and also changed the regulation numbers. This new edition reflects these changes. It discusses new sections covering domestic, commercial, industrial and agricultural projects, including material on marinas, caravan sites, and small scale floodlighting. This book provides guidance on certification and test methods, with full attention given to electrical safety requirements. Other brand new sections cover protective measures, additional protection by means of RCDs, the new cable guidelines for thin wall partitions and Part P of the Building Regulations. Provides simple, practical guidance on how to design electrical installation projects, including worked examples and case studies Covers new cable guidelines and Part P of the Building Regulations (Electrical Installations) in line with 17th edition of the Wiring Regulations BS 7671:2008 New chapters on protective measures and additional protection by means of RCDs (residual current devices) Features new wiring projects such as marinas, caravan sites and small scale floodlighting and street lighting Fully illustrated, including illustrations new to the fourth edition

General Specification for Electrical Installation in Government Buildings of the Hong Kong Special Administrative Region
Wiggins W.T.P. test facility building : preliminary report for the electrical installation
Design of Electrical Services for Buildings
17th Edition IEE Wiring Regulations: Explained and Illustrated
This project has been developed at the company Gavlegardarna. The company owns a large part of the buildings of G ä vle and two of them are the objective of the project. Gavlegardarna is highly concerned about the environment; for this reason, they cooperate on the subject with the energy management from their technical department. G ä vle is one of the Swedish cities where the DH (district heating) network is distributed, arriving to most of the dwellings, industries and commercial buildings. As DH uses environmentally friendly sources of energy, Gavlegardarna is introducing it in its buildings. Electrical radiators and boilers were installed in the buildings when the price of electricity was more affordable than nowadays. The price of the electricity can be considered 1,23 SEK/kWh while the DH price is 0,45 SEK/kWh. Consequently, this is another reason why the objective of the company at the present time is to replace electrical space heating systems by means of district heating. The energy balance of the buildings is analysed in order to study their current energy situation. This entails the consideration of heat gains and losses involved. The heat gains of the building are the heat from solar radiation which arrives at the building trough the windows, the heat internally generated (by persons, lighting and other devices) and the heat supplied. The heat losses are composed by the transmission trough walls and windows, the infiltrations, the heat used for hot tap water and the ventilation losses. An important part of the work required to calculate the energy balance has consisted of the collection and organization of all the data (areas, types of material, electrical devices, lighting, number of employees, opening hours...). This data comes from the drawings of the buildings provided by the company and from the information gathered during the visits to the installation. In addition, the ventilation flows were measured in-situ using the tools provided by Theorells. Gavle Energi, the DH distributor company, has been contacted in order to fix the cost and other details related to the district heating connection. The heat exchanger models, selected from Palmat System AB, are TP20 for Building A and TP10 for Building B. TP20 provides 100 kW of heating and 0,4 l/s of hot tap water and TP10 provides 50 kW and 0,31 l/s respectively. The capital cost is 187500 SEK which includes the heat exchangers and the connection cost. As the secondary circuit is not currently installed because the existing system is composed by electrical radiators, the installation of the piping network in the building has been designed. The radiators' power is calculated taking into account the need of heat in each room which is estimated as the transmission losses. This need of heat calculated is higher than the energy currently supplied which means that the thermal comfort is not achieved in all the rooms of the buildings. In spite of using more energy for space heating, the change of heat source entails a lower energy cost per year. The selected radiators are from Epecon and the investment cost (including the installation) is 203671 SEK. The brand of the selected pipes is Broson and the investment cost of the total piping system is 66000 SEK. The initial investment of the new installation is 457171 SEK, considering the DH connection, heat exchangers, radiators and pipes. If the initial investment is totally paid in cash by the company the payback will be fulfilled in 6 years. In case of borrowing the money from the bank (considering an interest rate of 5%), two possibilities can be considered: paying back the money in annual rates over 15 years or 30 years of maturity. The paybacks are 11 and 8 years respectively. After designing the DH piping system in the buildings, estimating the total costs of the investment and studying the project's feasibility by suggesting different payment options, some possible energy savings are recommended. The first of the options refers to the transmission losses trough the windows whose values' are considerably high. Using a glass with a lower U-value, these losses can decrease until 66% (with triple glass windows). Consequently, the power required for space heating can also be reduced until 26%. Regarding the ventilation, rotating heat exchangers are currently used, which entails the problem of smells mixture detected by the users of the buildings. By changing them with flat-plate heat exchangers, the problem is solved and the efficiency is increased from 66% to 85%. The new heat exchanger cost is 340387 SEK and it has a payback of 10 years.
Covers all your testing and inspection needs to help you pass your exams on City & Guilds 2391 and EAL 600/4338/6 and 600/4340/4 and Part P courses. Entirely up to date with the 18th Edition IET Wiring Regulations Step-by-step descriptions and photographs of the tests show exactly how to carry them out Completion of inspection and test certification and periodic reporting Fault finding techniques Testing 3 phase and single phase motors Supporting video footage of the tests contained in this book are available on the companion website This book covers everything you need to learn about inspection and testing, with clear reference to the latest updates to the legal requirements and wiring regulations. It answers all of your questions on the basics of inspection and testing, using clear and easy to remember language, along with sample questions and scenarios as they will be encountered in the exams. Christopher Kitcher tells you what tests are needed and describes them in a step-by-step manner with the help of colour photographs and the accompanying website. All of the theory required for passing the inspecting and testing element of all electrical installation qualifications along with the AM2, City & Guilds 2391 certificate and the EAL 600/4338/6 and 600/4340/4 qualifications is contained within this easy-to-follow guide – along with some top tips to help you pass the exam itself. With a strong focus on the practical element of inspection and testing for NVQs or apprenticeships, this is also an ideal reference tool for experienced electricians and those working in allied industries on domestic and industrial installations. www.routledge.com/cw/kitcher provides a large bank of helpful video demonstrations, multiple choice questions to test your learning, and further supporting materials.
Introduction to Electrical Installation Work follows the unit structure of the City & Guilds 2330 Level 2 Certificate in Electrotechnical Technology (installation route), covering the three core units of the scheme, along with the Occupational Unit 4 'Installation (Buildings &Structures)'. But this book will prove a vital purchase for any student on first year electrical courses as well as for those in related trades in the construction industry. Formerly Senior Lecturer at Blackpool & Fylde College, as well as Head of the NVQ Assessment Centre, Trevor Linsley is a best-selling author in electrical installation.
Building Services Handbook
Theory and Practice
Electrical Installation Work
Electrical Installation Designs
Building Services Branch Testing and Commissioning Procedure No. 2 for Electrical Installation in Government Buildings Hong Kong
Trevor Linsley's textbooks have helped thousands of students to gain their electrical installation qualifications. In a concise and practical way, Advanced Electrical Installation Work supports the City & Guilds 2330 Level 3 Certificate in Electrotechnical Technology and the 2356 Level 3 NVQ in Electrotechnical Services. Units covered: Unit 1 Application of health and safety and electrical principles Unit 2 Installation (Buildings and Structures): inspection, testing and commissioning Unit 3 Installation (Buildings and Structures): fault diagnosis and rectification The fifth edition has be Edition Wiring Regulations so that students can be sure to work to the latest regulations. The structure of the book has been overhauled and it now covers each learning outcome in a dedicated chapter. Learning features, such as key facts, definitions, safety tips and end of chapter questions with answers help students to check their understanding and revise for the exams. The text is highly illustrated and the book is now in full colour. For lecturers: http://textbooks.elsevier.com/web/product_details.aspx?isbn=9780750687508 a Tutor Support Material DVD covering both Level 978-0-7506-8750-8.
The Subject Electrical Design Estimating And Costing Covers An Important Functional Area Of An Electrical Diploma Holder. The Subject Is Taught In Various Forms In Different States. In Some States, It Is Covered Under Two Subjects, Namely, Electrical Design & Drawing And Electrical Estimating & Costing. In Some States It Is Taught As An Integrated Subject But Is Split Into Two Or Three Parts To Be Taught In Different Semesters.To Cater To The Needs Of Polytechnics Of Different States, The Content Of The Course Has Been Developed By Consulting The Curricula Education In The Country. In Addition To Inclusion Of Conventional Topics, A Chapter On Motor Control Circuits Has Been Included In This Book. This Topic Is Of Direct Relevance To The Needs Of Industries And, As Such, Finds Prominent Place In The Curricula Of Most Of The States Of India. The Book Covers Topics Like Symbols And Standards, Design Of Light And Fan Circuits, Alarm Circuits, Panel Boards Etc. Design Of Electrical Installations For Residential And Commercial Buildings As Well As Small Industries Has Been Dealt With In Detail. In Addition, Design Of Transmission And Distribution Lines, Sub-Stations And Design Of Illumination Schemes Have Also Been Included.The Book Contains A Chapter On Motor Circuit Design And A Chapter On Design Of Small Transformers And Chokes. The Book Contains Theoretical Explanations Wherever Required. A Large Number Of Solved Examples Have Been Given To Help Students Understand The Subject Better. The Authors Have Built Up The Course From Simple To Complex And From Known To Unknown. Examples Have Generally Been Taken From Practical Situations. Inde For Passing Examinations But Even More During Their Professional Career.

Advanced Electrical Installation Work
Electrical Installations in BuildingK W Publishers Pvt Limited
Trevor Linsley has helped many thousands of students to gain success in their study of the 2330 Certificate in Electrotechnical Technology from City & Guilds. With this brand new textbook, he focuses on the essential theory and practical tasks involved in carrying out electrical installation work, to create a thorough yet basic introductory guide. Ideally suited to students who may prefer a more visual-style of learning than seen in more traditional types of textbook, all examples and calculations are firmly rooted in actual engineering practice, giving the student real-world points of reference – these are the types of problems and situations that are actually encountered on-site. As such, this text will prove a vital purchase for any student embarking on their Level 2 certificate who needs an overall practical introduction to the subject, or those currently studying at foundation level who may be considering moving into electrical installation in the future. Building on the practical focus and accessible style used in his market-leading texts on this subject, this new full-colour introduction incorporates an array of learning features all designed to ensure the key concepts in electrical installation work are immediately identifiable and easily understandable. Trevor Linsley caters precisely for the unit requirements of the 2330 Level 2 Certificate in Electrotechnical Technology from City & Guilds certificate (installation route), covering the three core units of the scheme, along with the Occupational Unit 4 – Installation (Buildings & Structures). The content is also fully in line with the 2004 version of the IEE Wiring Regulations BS 7671:2001 incorporating Amendments 1:2002 & 2:2004). Formerly Senior Lecturer at Blackpool & Fylde College, as well as Head of the NVQ Assessment Centre, Trevor Linsley is a best-selling author in electrical installation.
Commercial work uses more material and the work is usually smooth, long-lasting and more profitable than residential. This updated book has the explanations, examples, and tips to help you comply with the parts of the NEC that apply to commercial wiring in load calculations, sizing of electrical services, selecting and installing overcurrent protection and more. You'll also find how to read and understand symbols, plans, drawings and schematics common in commercial electrical work. If you want to increase your work volume and profits by moving into commercial electrical work, get this book.
Advanced Electrical Installation Work, 6th ed
Electrical Installation Design Guide
Electricity, Electronics, Building Systems
Commercial Electrical Wiring
Electrical Installation Guide
The electrical installation play vital role in the utilization of building, constructed for different use, e.g. residences, offices, hotels, shopping complexes, theatres, sport stadiums, auditoriums, especially multi-storied buildings. The basic electrical installations are, lighting i.e. providing illumination both inside and outside buildings exhaust fans, use of portable and non-portable electrical machines or appliances and their wiring network, including sub-main wiring, cable, O.H. lines etc, including control panel and switches. The earthing is very common and essential electrical installation. The other electrical installations like air conditioning, various sound systems, protection against lightning and fire, lift, diesel generating sets, computer networking are various optional installation in various buildings. Protection against lightning and fire are mandatory in buildings as per building manual. Stage lighting, sound systems are essential in building used for various conference hall, auditorium, places of worship, studios and audio video broadcasting stations. Telecommunication and networking has become very useful electrical installation now-a-days. The book describes these optional electrical installations necessary for the buildings and useful for occupants. Lift is useful for accessing high floors and shifting of essential commodities. D.G. sets are essential for alternate source of energy at time of failure of the power supply from the powers stations. The book will be of interest for architects, engineers associated with building projects, students studying electrical engineering at polytechnics and architecture to provide in-depth understanding on estimating and costing.
The Third Edition of this classic reference is designed to provide authoritative guidance for engineers and technicians who have responsibility for planning, designing, building and operating electrical installation systems. The extensively revised scope includes a comprehensive overview of conventional and state-of-the-art installation equipment and its current usage. Special emphasis is placed on equipment with communication capability and the way in which this equipment is networked to the instabus EIB? bus system for a wide range of applications in residential and commercial buildings. The construction, dimensioning and protection of electrical distribution systems are treated taking into account the latest developments in systems engineering. In view of the electricity market deregulation and globalization and the associated standardization initiatives that are underway, reference has been made, where appropriate, to international, European and German norms, regulations and standards. This single volume edition is extensively illustrated throughout and includes a broad range of example applications of electrical installation systems.
Safe, efficient, code-compliant electrical installations are made simple with the latest publication of this widely popular resource. Like its highly successful previous editions, the National Electrical Code 2011 spiral bound version combines solid, thorough, research-based content with the tools you need to build an in-depth understanding of the most important topics. New to the 2011 edition are articles including first-time Article 399 on Outdoor, Overhead Conductors with over 600 volts, first-time Article 694 on Small Wind Electric Systems, first-time Article 840 on Premises Powered Broadband Communications Systems, and more. This spiralbound version allows users to open the code to a certain page and easily keep the book open while referencing that page. The National Electrical Code is adopted in all 50 states, and is an essential reference for those in or entering careers in electrical design, installation, inspection, and safety.
Modern Wiring Practice
Electrical Design Estimating and Costing
An American National Standard
Basic Electrical Installation Work
Power Supply and Distribution, Protective Measures, Electromagnetic Compatibility, Electrical Installation Equipment and Systems, Application Examples for Electrical Installation Systems, Building Management
Everything needed to pass the first part of the City & Guilds 2365 Diploma in Electrical Installations. Basic Electrical Installation Work will be of value to students taking the first year course of an electrical installation apprenticeship, as well as lecturers teaching it. The book provides answers to all of the 2365 syllabus learning outcomes, and one chapter is dedicated to each of the five units in the City & Guilds course. This edition is brought up to date and in line with the 18th Edition of the IET Regulations: It can be used to support independent learning or a college based course of study Full-colour diagrams and photographs explain difficult concepts and clear definitions of technical terms make the book a quick and easy reference Extensive online material on the companion website www.routledge.com/cw/linsley helps both students and lecturers
Electrical services are a vital component in any building, so it is necessary for construction professionals to understand the basic principle of services design. Design of Electrical Services for Buildings provides a basic grounding for students and graduates in the field. It covers methods of wiring, schemes of distribution and protection for lighting and power installations. Systems such as alarms and standby supplies are also covered. Each method is described in detail and examples of calculations are given. For this fourth edition, the coverage of wiring and electrical regulations have been brought fully up to date, and the practical information has been revised.
Handbook of Electrical Installation Practice covers all key aspects of industrial, commercial and domestic installations and draws on the expertise of a wide range of industrial experts. Chapters are devoted to topics such as wiring cables, mains and submains cables and distribution in buildings, as well as power supplies, transformers, switchgear, and electricity on construction sites. Standards and codes of practice, as well as safety, are also included. Since the Third Edition was published, there have been many developments in technology and standards. The revolution in electronic microtechnology has made it possible to introduce more complex technologies in protective equipment and control systems, and these have been addressed in the new edition. Developments in lighting design continue, and extra-low voltage luminaries for display and feature illumination are now dealt with, as is the important subject of security lighting. All chapters have been amended to take account of revisions to British and other standards, following the trend to harmonised European and international standards, and they also take account of the latest edition of the Wiring Regulations. This new edition will provide an invaluable reference for consulting engineers, electrical contractors and factory plant engineers.
Residential, Commercial and Industrial Electrical Systems
Handbook of Electrical Installation Practice
General Specification for Electrical Installation in Government Buildings, Hong Kong
Level 3 Diploma in Electrical Installations (Buildings and Structures)
Electrical Installation (Higher)
This popular guide focuses on common misconceptions in the application of the Wiring Regulations. It explains in clear language those parts of the Regs that most need simplifying, outlining the correct procedures to follow and those to avoid. Emphasis has been placed on areas where confusion and misinterpretation is common, such as earthing and bonding, circuit design and protection, and in particular the increased use of RCDs. It is an affordable reference for all electrical contractors and other workers involved in electrical installations. It will enable safe and efficient compliance and help answer queries quickly to ensure work complies with the latest version of the Wiring Regulations. With the coverage carefully matched to the syllabus of the City & Guilds Certificate in the Requirements for Electrical Installations (2382-10 and 2382-20) and containing sample exam questions and answers, it is also an ideal revision guide. Brian Scaddan, I Eng, MIET, is a consultant for and an Honorary Member of City & Guilds. He has over 35 years' experience in Further Education and training. He is Director of Brian Scaddan Associates Ltd, an approved City and Guilds and NICEIC training centre offering courses on all aspects of Electrical Installation Contracting including the C&G 2382 series. He is also a leading author of books on electrical installation.
