**This is the eBook of the printed book and may not include any media, website access codes, or print supplements that may come packaged with the bound book. NOTE: This edition features the same content as the traditional text in a convenient, three-hole-punched, loose-leaf version. Books a la Carte also offer a great value—this format costs significantly less than a new textbook Families and Their Social Worlds 3/e, leads students to view the family on a macro level by examining policies in place and how those policies impact families. Author Karen Seccombe encourages students to think about families beyond their own personal experiences, and even beyond family structure in the United States. Integrated coverage of important policy considerations throughout each chapter illustrates what is currently being done, and perhaps more importantly what can be done, to strengthen families and intimate relationships. Laboratory Manual to Accompany Chemistry: Atoms First by Gregg Dieckmann and John Sibert from the University of Texas at Dallas. This laboratory manual presents a lab curriculum that is organised around an atoms-first approach to general chemistry. The philosophy behind this manual is to (1) provide engaging experiments that tap into student curiosity, (2) emphasize topics that students find challenging in the general chemistry lecture course, and (3) create a laboratory environment that encourages students to “solve puzzles” or “play” with course content and not just “follow recipes.” The laboratory manual represents a terrific opportunity to get students turned on to science while creating an environment that connects the relevance of the experiments to a greater understanding of their world. This manual has been written to provide instructors with tools that engage students, while providing important connections to the material covered in an atoms-first lecture course.**

**University Physics, 1e** by Bauer and Westfall is a comprehensive text with enhanced calculus coverage incorporating a consistently used 7-step problem solving method. When Julie Miller began writing her successful developmental math series, one of her primary goals was to bridge the gap between preparatory courses and college algebra. For thousands of students, the Miller/O'Neill/Hyde (or M/O/H) series has provided a solid foundation in developmental mathematics. With the Miller College Algebra series, Julie has carried forward her clear, concise writing style; highly effective pedagogical features; and complete author-created technological package to students in this course area. The main objectives of the college algebra series are three-fold: •Provide students with a clear and logical presentation of the basic concepts that will prepare them for continued study in mathematics. •Help students develop logical thinking and problem-solving skills that will benefit them in all aspects of life. •Motivate students by demonstrating the significance of mathematics in their lives through practical applications.

The **Workbook** includes the student solutions manual for a one-stop shop for student use. The **Workbook** was written by Dawn Richardson and Amina El-Ashmawy from Collin College. The **Workbook** offers students the opportunity to practice the basic skills and test their understanding of the content knowledge within the chapter. Types of problems and how to solve them are presented along with any key notes on the concepts to facilitate understanding. Key Concepts, Study Questions, Practice Questions, and a Practice Quiz are provided within each chapter. The student will find detailed solutions and explanations for the odd-numbered problems in this text in the solutions manual by AccuMedia Publishing Services, Julia Burdge, and Jason Overby.

**Chemistry, Third Edition**, by Julia Burdge offers a clear writing style written with the students in mind. Julia uses her background of teaching hundreds of general chemistry students per year and creates content to offer more detailed explanation on areas where she knows they have problems. With outstanding art, a consistent problem-solving approach, interesting applications woven throughout the chapters, and a wide range of end-of-chapter problems, this is a great third edition text.

Problem-Solving Workbook with Selected Solutions for Chemistry: Atoms First

This text is designed for a rigorous course in introductory chemistry. Its central theme is to challenge students to think and question while providing a sound foundation in the principles of chemistry.

A comprehensive introduction to inorganic chemistry and, specifically, the science of metal-based drugs, *Essentials of Inorganic Chemistry* describes the basics of inorganic chemistry, including organometallic chemistry and radiochemistry, from a pharmaceutical perspective. Written for students of pharmacy and pharmacology, pharmaceutical sciences, medicinal chemistry and other health-care related subjects, this accessible text introduces chemical principles with relevant pharmaceutical examples rather than as stand-alone concepts, allowing students to see the relevance of this subject for their future professions. It includes exercises and case studies.

From its very origin, *Introductory Chemistry: An Atoms First Approach* by Julia Burdge and Michelle Driessen has been developed and written using an atoms-first approach specific to introductory chemistry. It is not a pared down version of a general chemistry text, but carefully crafted with the introductory chemistry student in mind. The ordering of topics facilitates the conceptual development of chemistry for the novice, rather than the historical development that has been used traditionally. Its language and style are student-friendly and conversational; and the importance and wonder of chemistry in everyday life are emphasized at every opportunity. Continuing in the Burdge tradition, this text employs an outstanding art program, a consistent problem-solving approach, interesting applications woven throughout the chapters, and a wide range of end-of-chapter problems.

*Research in science education has recognized the importance of history and philosophy of science (HPS). Nature of science (NOS) is considered to be an essential part of HPS with important implications for teaching science. The role played by textbooks in developing students’ informed conceptions of NOS has been a source of considerable interest for science educators. In some parts of the world, textbooks become the curriculum and determine to a great extent what is taught and learned in the classroom. Given this background and interest, this monograph has evaluated NOS in university level general chemistry textbooks published in U.S.A. Most textbooks in this study provided little insight with respect to the nine criteria used for evaluating NOS. Some of the textbooks, however, inevitably refer to HPS and thus provide guidelines for future textbooks. A few of the textbooks go into considerable detail to present the atomic models of Dalton, Thomson, Rutherford, Bohr and wave mechanical to illustrate the tentative nature of scientific theories --- an important NOS aspect. These results lead to the question: Are we teaching science as practiced by scientists? An answer to this question can help us to understand the importance of NOS, by providing students an HPS-based environment, so that they too (just like the scientists) feel the thrill and excitement of discovering new things. This monograph provides students and teachers guidelines for introducing various aspects of NOS, based on historical episodes.*

Steve and Susan Zumdahl’s texts focus on helping students build critical thinking skills through the process of becoming independent problem-solvers. They help students learn to think like a chemists so they can apply the problem solving process to all aspects of their lives. In **CHEMISTRY: AN ATOMS FIRST APPROACH**, the Zumdahls use a meaningful approach that begins with the atom and proceeds through the concept of molecules, structure, and bonding, to more complex materials and their properties. Because this approach differs from what most students have experienced in high school courses, it encourages them to focus on conceptual learning early in the course, rather than relying on memorization and a plug and chug method of problem solving that even the best students can fall back on when confronted with familiar material. The atoms first organization provides an opportunity for students to use the tools of critical thinkers: to ask questions, to apply rules and models and to evaluate outcomes. **Human Nutrition: Science for Healthy Living** is an interesting, engaging, reliable, and evidence-based introductory textbook with a wide variety of features to promote active learning. A clinical emphasis appeals to all, but is of particular relevance to those studying nutrition, dietetics, or health science professions, including nursing. Real-life and clinical examples, statistics, and evidence from professional sources address current and controversial topics and support the key concepts of the science of nutrition. **Human Nutrition** provides the framework for students to not just memorize facts, but to truly learn and apply the science of nutrition. The knowledge gained can be applied not only to a future profession, but, just as importantly, to everyday life. Our hope is that readers share the practical advice and key concepts learned in the textbook with family and friends to promote optimal health and wellness.

This classic now in its third edition covers all the best methods used to make LSD. The emphasis is upon natural sources of lysergic acid such as wild ergot, morning glory seeds or woodrose seeds, but extraction of ergotamine migraine medicines are also detailed. Once the lysergic acid has been procured from these sources, the text moves on to detailed descriptions of the methods used to convert lysergic acid to LSD. The text does not stop there! It also gives detailed information on the chemicals used to make LSD in combination with lysergic acid, and what ordinary uses they have. The book also covers solvent management since extraction of lysergic acid from natural sources entails the use of a considerable amount of solvents. To further entertain the reader, a section is devoted to the production of TMA-2 from calamus oil, and MDMA or MDA from sassafra oil. A still further section is devoted to keeping out of trouble.

*The atoms first approach provides a consistent and logical method for teaching general chemistry. This approach starts with the fundamental building block of matter, the atom, and uses it as the stepping stone to understanding more complex chemistry topics. Once mastery of the nature of atoms and electrons is achieved, the formation and properties of compounds are developed. Only after the study of matter and the atom will students have sufficient background to fully engage in topics such as stoichiometry, kinetics, equilibrium, and thermodynamics. Thus, the Atoms First method empowers instructors to present the most complete and compelling story of general chemistry. Far from a simple re-ordering of topics, this is a book that will truly meet the needs of the growing atoms-first market.*
