

## *Burgas Integrated Urban Transport Project*

This report analyses Bulgaria's legal framework for administrative penalties. The report assesses the subjective scope of their application, the typologies and levels of administrative penalties, and the proceedings for applying them.

Recoge: 1. Shifting the balance between modes of transport - 2. Eliminating bottlenecks - 3. Placing users at the heart of transport policy - 4. Managing the globalization of transport - 5. Time to decide. This book analyzes how transport influences the ecology of various regions. Integrating perspectives and approaches from around the globe, it examines the use of different types of engines and fuels, and assesses the impact of vehicle design on the environment. The book also addresses the effect of the transport situation in agglomerations on their environmental safety. Various types of environmental impacts are considered, from traditional emissions to noise and vibration. Presenting scientific advances from 7 European countries, the book appeals to experts, teachers and students, as well as to anyone interested in the environmental aspects of the transport industry.

Methodology and Theory

Western Europe 2020-2022

Modelling of the Interaction of the Different Vehicles and Various Transport Modes

The Instrument for Structural Policy for Pre-Accession (ISPA) in ... Maximizing the Potential!

The World Today Series: Western Europe is an annually updated presentation of each sovereign country in Western Europe, past and present. It is organized by individual chapters for each country expertly covering the region 's geography, people, history, political system, constitution, parliament, decentralization and states if a federation, parties, political leaders and elections. There are also sections on foreign and defense policy, economy, culture, future and a comprehensive bibliography. The combination of factual accuracy and up-to-date detail along with its informed projections make this an outstanding resource for researchers, practitioners in international development, media professionals, government officials, potential investors and students. Now in its 33rd edition, the content is thorough yet perfect for a one-semester introductory course or general library reference. Available in both print and e-book formats and priced low to fit student budgets.

The Routledge Handbook of Small Towns addresses the theoretical, methodical, and practical issues related to the development of small towns and neighbouring countryside. Small towns play a very important role in spatial structure by performing numerous significant developmental functions for rural areas. At the local scale, they act as engines for economic growth of rural regions and as a link in the system of connections between large urban centres and the countryside. The book addresses

the role of small towns in the local development of regions in countries with different levels of development and economic systems, including those in Europe, Africa, South America, Asia, and Australia. Chapters address the functional structure of small towns, relations between small towns and rural areas, and the challenges of spatial planning in the context of shaping the development of small towns. Students and scholars of urban planning, urban geography, rural geography, political geography, historical geography, and population geography will learn about the role of small towns in the local development of countries representing different economic systems and developmental conditions.

Conflict and cooperation are two dynamics that have shaped the political economy and international relations around the Black Sea since the early nineties. Despite the negative structural environment and the persistence of a high security dilemma, cooperative efforts among Black Sea actors (primarily state elites but increasingly non-state actors) have been advancing, even though slowly. Representing a new development in the study of contemporary regionalism, Panagiota Manoli examines the process of institutionalized subregional cooperation and casts new light on the factors influencing the reconfiguration of subregional structures in the region.

Focusing on the primary initiative in the region, Black Sea Economic Cooperation (BSEC), Manoli traces how subregionalism has evolved since the early nineties and what has been driving and conditioning this process. Questioning whether there is a definitive nature to subregionalism, Manoli then discusses Black Sea subregionalism within the European integration process, examining the impact of the European Union. Contributing to the conceptualization of the subregional phenomenon, this book should be read by scholars and policy-makers alike unclear on how local elements interface with extra-regional forces in the shaping of a subregion.

Building a Comprehensive and Coherent Legal Framework

The International Conference Education and Creativity for a Knowledge based Society – Social and Political Sciences, Communication, Foreign Languages and Public Relations, 2012

Since 1994, the European Conferences of Product and Process Modelling ([www.ecppm.org](http://www.ecppm.org)) have provided a review of research, development and industrial implementation of product and process model technology in the Architecture, Engineering, Construction and Facilities Management (AEC/FM) industry. Product/Building Information Modelling has matured significantly in the last few years and has never been closer to having a permanent impact on the AEC/FM industry as a mainstream technology. In this context the 9th European Conference of Product and Process Modelling provided a forum for leading experts to discuss the latest achievements, emerging trends and future directions in product and process modelling technology in this dynamic and fragmented industry, focusing on integrated project working, value-based life cycle management and intelligent and sustainable buildings and construction.

eWork and eBusiness in Architecture, Engineering and Construction 2012 provides a comprehensive overview of topics including BIM in all life-cycle stages, ICT for energy efficiency, smart buildings and environmental performance, energy and building simulation, knowledge and semantic modelling, visualization technologies as well as tools and methods to support innovations in design and construction processes. It further includes the proceedings of the 3rd Workshop on eeBuildings Data Models (Energy Efficiency Vocabularies), which aim to identify ICT Energy Efficiency Vocabularies and Ontologies to foster interoperability of Energy Efficiency Management Systems. eWork and eBusiness in Architecture, Engineering and Construction 2012 will be of interest to academics and professionals working in the interdisciplinary area of information technology in architecture, engineering and construction.

Innovation in public procurement is essential for sustainable and inclusive growth in an increasingly globalized economy. To achieve that potential, both the promises and the perils of innovation must be investigated, including the risks and opportunities of joint procurement across borders in the European Union and the United States. This in-depth research investigates innovation in public procurement from three different perspectives. First, leading academics and practitioners assess the purchase of innovation, with a particular focus on urban public contracting in smart cities involving meta-infrastructures, public-private partnership arrangements and smart contracts. A second line of inquiry looks for ways to encourage innovative suppliers. Here, the collected authors draw on emerging lessons from the US and Europe, to explore both the costs and the benefits of spurring innovation through procurement. A third perspective looks to various innovations in the procurement process itself, with a focus on the effects of joint and cross-border procurement in the EU and US landscapes. The chapters review new technologies and platforms, the increasingly automated means of selecting suppliers, and the related efficiencies that [big data] can bring to public procurement. Expanding on research in the editors' prior volume, Integrity and Efficiency in Sustainable Public Contracts: Balancing Corruption Concerns in Public Procurement Internationally (Bruylant 2014), this volume builds on a series of academic conferences and exchanges to address these issues from sophisticated academic, institutional and practical perspectives, and to point the way to future research on the contractual models that are emerging from new procurement technologies.

The Human Geography of East Central Europe examines the geography of the transition economies that were not formerly part of the Soviet Union: Albania, Bosnia & Hercegovina, Bulgaria, Croatia, The Czech Republic, Hungary, Macedonia, Poland, Romania, Slovakia, Slovenia, Yugoslavia and East Germany. There is a thematic treatment beginning with the landscape and historical background, which moves on to the social and economic geography (industry, agriculture and infrastructure) and to issues concerning regional development and environmental protection.

Ecology in Transport: Problems and Solutions

Europe

Edited in collaboration with TEN ECOPORT project, this volume contains the proceedings of the 1st International Conference on 'Sustainable Development of the Sea-corridors and Coastal Waters'. The book highlights the advances of environmental pollution management on ports and coastal zones. Particular attention is given to water quality, issues that concern the marine environment of sea corridors and coastal waters, especially in regions surrounding ports. In addition to these topics the chapters explore novel methodologies and

technologies, IT solutions, data and instrumentation of monitoring water quality. The book is organized into five parts: assessment, monitoring, sustainable management system, port processes and historical ports. TEN ECOPORT (Transnational ENhancement of ECOPORT8 network) is a project co-financed by the South East Europe Transnational Cooperation Programme.

By the end of this century, 9 out of 10 Europeans will live in an urban area. But what kind of city will they call home? You'll find all the answers in CITY, TRANSFORMED, the new essay series from the European Investment Bank. This panoramic first essay in the series lays out a great sweeping history of European cities over the last fifty years—and showcases new directions being taken by some of our most innovative cities. Urban experts Greg Clark, Tim Moonen, and Jake Nunley based at University College London take a definitive look at how Europe's cities transformed from post-industrial decline to thriving metropolises that are as prosperous and liveable as anywhere on Earth.

Western Europe 2020-2022 provides students with vital information on all countries on the African continent through a thorough and expert overview of political and economic histories, current events, and emerging trends.

Western Europe 2019-2020

*This book aims at showing how big data sources and data analytics can play an important role in sustainable mobility. It is especially intended to provide academicians, researchers, practitioners and decision makers with a snapshot of methods that can be effectively used to improve urban mobility. The different chapters, which report on contributions presented at the 4th Conference on Sustainable Urban Mobility, held on May 24-25, 2018, in Skiathos Island, Greece, cover different thematic areas, such as social networks and traveler behavior, applications of big data technologies in transportation and analytics, transport infrastructure and traffic management, transportation modeling, vehicle emissions and environmental impacts, public transport and demand responsive systems, intermodal interchanges, smart city logistics systems, data security and associated legal aspects. They show in particular how to apply big*

*data in improving urban mobility, discuss important challenges in developing and implementing analytics methods and provide the reader with an up-to-date review of the most representative research on data management techniques for enabling sustainable urban mobility*

*With half of humanity already living in towns and cities and that proportion expected to increase in the coming decades, society - both Western and non-Western - is fast becoming urban and even mega-urban. As such, research in urban settings is evidently timely and of great importance. Anthropology in the City brings together a leading team of anthropologists to address the complex methodological and theoretical challenges posed by field-research in urban settings, clearly identifying the significance of the anthropological paradigm in urban research and its centrality both to mainstream academic debates and to society more broadly. With essays from experts on wide-ranging ethnographic research from fields as diverse as China, Europe, India, Latin and North America and South East Asia, this book demonstrates the contribution that empirically-based anthropological analysis can make to our understanding of our increasingly urban world.*

*This book discusses various issues of modeling freight and passenger traffic, and explores the common approaches and regional differences. The latter may be a consequence of national legislation or the various approaches that are adopted by scientists around the globe. It focuses on the organization of transcontinental transport and aspects of planning and harmonizing the movement of various transport means, particularly intermodal and multimodal transport. New approaches to the prediction of transportation needs are also considered. Written by international experts, the book is divided into 2 parts: the first part analyzes passenger transport, while the second addresses freight transport. It is intended wide audience, including university professors, graduate and Ph.D. students; transport professionals, and logistics specialist.*

*The Dynamics of Black Sea Subregionalism*

The World Today Series: Western Europe is an annually updated presentation of each country in Western Europe, past and present.

This open access book presents current knowledge about ecosystem services (ES) in urban planning, and discusses various urban ES topics such as spatial distribution of urban

ecosystems, population distribution, and physical infrastructure properties. The book addresses all these issues by: i) investigating to what extent ecosystem services are currently integrated in urban plans, and discussing what is still needed to improve planning practice; ii) illustrating how to develop ecosystem services indicators and information that can be used by urban planners to enhance plan design; iii) demonstrating the application of ES assessments to support urban planning processes through case studies; and iv) reflecting on criteria for addressing equity in urban planning through ecosystem service assessments, by exploring factors associated with the supply of, the access to and demand for ES by citizens. Through five case studies, from policy questions, to baseline analysis and indicators, and from comparison to proposed solutions, the book offers readers detailed and accessible coverage of outstanding issues and proposed solutions to better integrate ES in city planning. The purpose of the book is to provide a compact reference that can be used by researchers as a resource offering an updated perspective and overview on the field, as well as by practitioners and planners/decision makers as a source of inspiration for their activity. Additionally, the book will be a suitable resource for both undergraduate and post-graduate courses in planning and urban geography.

*Deciphering the European Investment Bank: History, Politics and Economics* examines the role of the European Investment Bank (EIB), the European Union's financial institution and the largest lender and borrower among the International Financial Institutions. Since its establishment in 1958, the EIB has developed without becoming front-page news and has remained highly invisible. By putting together fourteen chapters that analyze topical and meaningful moments and aspects of the bank, this edited book offers the first comprehensive analysis of its role and its evolution in terms of its mandate, governance, structures, policy activity, and performance. Written by acknowledged experts from various disciplines, the chapters combine together history, economics, law, and political science to provide a multidisciplinary examination and capture the complexity of the EIB. The book is a timely initiative for understanding the EIB, whose role has been ever increasing for contributing to the region's economic challenges, including the economic and financial crisis, climate change and COVID-19 pandemic. The chapters are written at a level which will be comprehensible for undergraduates in economics, history, and international political economy. It will also be a valuable source of reference for academics, policy makers, bankers, and other practitioners interested in regional development banks and their role in the global economy.

*This publication has been designed to assist member States in integrating transport, health, quality of life and environmental objectives into urban and spatial planning policies. It provides many references to case studies, good practices and examples from cities across the Euro-Asian region (and beyond) covering a wide array of thematic areas, including: the future of sustainable urban mobility; spatial planning in function of sustainable urban mobility and accessibility; public transport planning as a cornerstone of sustainable urban mobility; active mobility and how it promotes health and the environment; and the potential of Intelligent Transport Systems in an urban context. The publication puts forward a methodology for sustainable urban transport planning and introduces a concise set of key messages and recommendations as an input to the Fifth High-level Meeting on Transport, Health and Environment which takes place in Vienna from 26-27 November 2020.*

*Burgas regularly tops the list of best places to live in Bulgaria. Whether enjoying a walk through the resplendent Sea Garden, relaxing on the beautiful central city beach, or enjoying a drink and fresh grilled fish at one of the many outdoor bars and restaurants, it is easy to see why tourists like it so much. A key challenge for the city, however, is to extend this good feeling to the off-season, when tourists are few, the economy is less animated, and the central area is almost comatose after dark. The city aims to deliver this transformation with its smart city agenda.*

### **Construction**

This book presents a systemic view of the diversity of pressures and impacts produced by climate change and human actions. Erosion of biodiversity by changing ocean chemistry, the intensification of global change raises the problem of the adaptation of living resources. Land uses induce ecological imbalances leading to asphyxiation true coastal ecosystems. More than a billion tons of solid waste must be assimilated by the marine environment and food webs. Radioactive discharges emitted into the atmosphere or into the aquatic environment, raise the question of their future. Sea and Ocean series offers a transversal approach of the ocean system that leads to governance, sustainable resource management and adaptation of societies.

These ethnographically-based studies of diverse urban experiences across the world present cutting edge research and stimulate an empirically-grounded theoretical reconceptualization. The essays identify ethnography as a powerful tool for making sense of life in our rapidly changing, complex cities. They stress the point that while there is no need to fetishize fieldwork—or to view it as an end in itself —its unique value cannot be overstated. These active, engaged researchers have produced essays that avoid abstractions and generalities while engaging with the analytical complexities of ethnographic evidence. Together, they prove the great value of knowledge produced by long-term fieldwork to mainstream academic debates and, more broadly, to society.

This paper focuses on EU structural and cohesion funds assistance to Bulgaria during the 2007–13 program period. Initial weaknesses resulted in a low absorption rate, which was mitigated by increasing advance payments; applying electronic application and reporting procedures; simplifying and unifying tender processes; and strengthening the role of international financial institutions and banks in project preparation, evaluation and monitoring. The possible impact on growth and potential output is briefly discussed, while the risks of improper absorption are acknowledged. Valuable lessons have been learned, but it is recommended that additional steps be taken for the next program period 2014–20.
