The book discusses the complete range of specialties, including cardiology, pulmonology, gastroenterology, neurology, toxicology, and much more. Each condition is presented in a step by step process, covering pathophysiology, signs and symptoms, diagnosis, treatment, and other considerations such as age/developmental issues. The comprehensive appendices section covers essential data and assessment for the management of critically ill patients including discussion on drugs, dosages and side effects, clinical scores, indices and equations, normal biochemical values, ICU rounds and more. The text is highly illustrated with clinical images, diagrams and tables, and includes recent articles and current guidelines on management of sepsis and deep vein thrombosis (DVT). Key points Practical guide to management of patients in intensive care Covers complete range of specialties, presented in a step by step, clinically oriented approach Comprehensive appendices section covers drugs, clinical scores, biochemical values and much more Includes recent articles and current guidelines on management of sepsis and DVT

This book presents a comprehensive overview of recent clinical techniques and findings regarding wounds in burns, infections of wounds, and wound management in general. With the help of numerous high-quality illustrations, the first part of the book describes various approaches to treating patients with burn wounds. In turn, the second part focuses on infections of wounds. Here, the chapter authors summarize the most recent treatment options for wound infection in both children and adults. The third and last part addresses wound management in general, rounding out the content. Given the breadth of its coverage, the book offers a valuable resource for beginners and experienced plastic surgeons alike.

The second edition of this volume has been updated with chapters on scar treatment using laser, microneedling, tissue engineering, adipose tissue and lipofilling. It compiles the perspectives of a multi-author team, examining the entire spectrum of burn reconstruction and long-term treatment. Individual updated chapters cover basic aspects of wound healing and scarring, and plastic surgery relating to tissue rearrangement and the use of flaps, as well as the long-term use of skin and skin substitutes. Furthermore, it addresses topics such as rehabilitation and scar management in detail. It provides comprehensive reconstruction guidelines organized by anatomic region (e.g. face, hands, ...) as well as future trends and prospects in burn reconstruction, such as allotransplantation and bionics. **Palliative care has become increasingly important across the spectrum of healthcare, and with it, the need for education and training of a broad range of medical practitioners not previously associated with this field of care. Part of the Integrating Palliative Care series, this volume on surgical palliative care guides readers through the core palliative skills and knowledge needed to deliver high value care for patients with life-limiting, critical, and terminal illness under surgical care. Chapters explore the historical, philosophical, and spiritual principles of surgical palliative care, and follow the progression of the seriously ill surgical patient's journey from the pre-operative encounter, to the invasive procedure, to the post-operative setting, and on to survivorship. An overview of the future of surgical palliative care education and research rounds out the text. Surgical Palliative Care is an ideal resource for surgeons, surgical nurses, intensivists, and other practitioners who wish to learn more about integrating palliative care into the surgical field.**

'I can enthusiastically recommend the Manual of Clinical Paramedic Procedures as the book that I wish had been available to me when I was studying to become a paramedic.' From the foreword by Professor Malcolm Woollard, Chair, College of Paramedics; Professor in Pre-hospital and Emergency Care & Director, Pre-hospital, Emergency & Cardiovascular Care Applied Research Group, Coventry University Clinical procedures are a fundamental aspect of care for practitioners working in pre-hospital settings. The Manual of Clinical Paramedic Procedures is written specifically to support the practice of paramedics, ambulance technicians, first responders and volunteer ambulance personnel. It presents up-to-date, evidence-based expert knowledge, enabling paramedics to deliver effective, patient-focused care. This accessible handbook provides a comprehensive exploration of core competencies and skills, looking at topics including Aseptic Technique, Airway Management, Assisted Ventilation, Cardiopulmonary Resuscitation, Defibrillation and External Cardiac Pacing, Observations, Pain Assessment & Management, Respiratory Therapy, Spinal Management and Venepuncture. Each chapter provides the relevant anatomy & physiology, evidence-based rationales for each procedure, and contraindications of use. Key features: The first UK text to explore clinical procedures for paramedics With further reading and illustrations throughout All procedures include the rationale for the action recommended Guides paramedics in the clinical application of evidence-based procedures

Covering everything from historical and international perspectives to basic science and current clinical practice, Miller's Anesthesia, 9th Edition, remains the preeminent reference in the field. Dr. Michael Gropper leads a team of global experts who bring you the most up-to-date information available on the technical, scientific, and clinical issues you face each day – whether you're preparing for the boards, studying for recertification, or managing a challenging patient care situation in your practice. Includes four new chapters: Clinical Care in Extreme Environments: High Pressure, Immersion, and Hypo- and Hyperthermia; Immediate and Long-Term Complications; Clinical Research; and Interpreting the Medical Literature. Addresses timely topics such as neurotoxicity, palliation, and sleep/wake disorders. Streamlines several topics into single chapters with fresh perspectives from new authors, making the material more readable and actionable. Features the knowledge and expertise of former lead editor Dr. Ronald Miller, as well as new editor Dr. Kate Leslie of the University of Melbourne and Royal Melbourne Hospital. Provides state-of-the-art coverage of anesthetic drugs, guidelines for anesthetic practice and patient safety, new techniques, step-by-step instructions for patient management, the unique needs of pediatric patients, and much more – all highlighted by more than 1,500 full-color illustrations for enhanced visual clarity.

This text addresses many of the questions which occur when medical professionals of various disciplines interact and have different plans and interventions, each with its own valid scientific and/or experience-based rationale: Questions involving tourniquet placement, ideal fluids and volumes for resuscitation, VTE prophylaxis and many other management considerations. Straightforward decisions in the patient with a single diagnosis often conflict when applied to the neurologically injured polytrauma patients. Neurotrauma Management for the Severely Injured Polytrauma Patient answers as many of these questions as possible based on the current literature, vast experience with severe neurotrauma in the current conflicts in Afghanistan and Iraq, and the experience of trauma experts across the globe as well as proposes areas for future study where answers are currently less clear.
