Patents as an Incentive for Innovation Edited by Rafal Sikorski & Zaneta Zemla-Pacud Patents are a reward for human inventiveness. A well-functioning patent system must provide incentives for innovation, safeguard dynamic competition and protect the public interest – a balancing act fraught with difficulty in the ‘connected’ global world. This ground-breaking book is the first to deeply analyse how patent law today performs its function of stimulating innovation in the crucial sectors of healthcare, agriculture, artificial intelligence and communications technology. Patent specialists, practitioners and scholars from various jurisdictions thoroughly describe how patent rights can be deployed to incentivize investments in researching and developing socially critical innovations without sacrificing the public’s interest in sharing the benefits that are produced. Among the emerging issues of patent rights investigated are the following: protectability and morality of according private rights over material derived from the human body; licensing on fair, reasonable and non-discriminatory (FRAND) terms; the supplementary protection certificate (SPC) manufacturing waiver; patent eligibility of artificial intelligence-related inventions; excessive enforcement of patents by patent assertion entities; enforcement of second medical use innovations; the so-called ‘grain of rice’ exception; the rights of inventors, and breeders’ rights; international trade regulations and their influence on patent systems; human enhancement technologies and the consequences of patenting them; specifics of patent protection for biologic medicines; challenges posed by artificial intelligence for the disclosure requirement in patent law; and standard essential patent licensing, particularly in the context of the 5G standard. Perspectives taken into consideration by the authors include protectability criteria, length and scope of the granted protection, mechanisms for dealing with the friction between generalized application and specialized concerns, and rights enforcement. These aspects are analysed on the domestic, international and global levels. The COVID-19 pandemic has highlighted the urgent need to strike the right balance between innovation and access in healthcare and other technologies, a need rooted in patent law. Because the problems discussed – and solutions offered – in this collection of expert essays are of tremendous practical and cultural significance, the book will be of immeasurable value to practitioners, policymakers and researchers in patent law and other fields of intellectual property law.

Dynamic Business Law: The Essentials is appropriate for the one-semester Business Law course. It contains the basics of business law but does not get bogged down in the kind of details that are more appropriate in an upper-level law class. The text provides an examination of the basic questions, concepts, and legal rules of business law. Emphasis on the BUSINESS in business law. Dynamic Business Law: The Essentials emphasizes the tie of legal issues back to the core business curriculum. This will help both students and faculty. Faculty need to know how this is integrated as they are constantly ‘defending’ the inclusion of this course in the business curriculum. And students need to understand how the concepts tie to their future business careers. Emphasis on TEACHING. Many professors teaching this course are attorneys first and academics second. They do not have a lot of time to prepare or think about how to apply this information effectively for their business students. Dynamic Business Law: The Essentials contains a helpful instructor’s manual, particularly for the many adjuncts teaching this course. Emphasis on CRITICAL THINKING. Neil Browne, one of the co-authors of this text, has written a successful text on critical thinking. His framework is included in Dynamic Business Law: The Essentials as well – to help students learn how to frame and reframe a question/issue. Critical thinking questions are also included at the end of each case, to tie in this component even further.

Elic of Melniboné

A Dictionary of Arts, Sciences, Literature and General Information

How the obsession with quantifying human performance threatens business, medicine, education, government—and the quality of our lives Today, organizations of all kinds are ruled by the belief that the path to success is quantifying human performance, publicizing the results, and dividing up the rewards based on the numbers. But in our zeal to instill the evaluation process with scientific rigor, we’ve gone from measuring performance to fixating on measuring itself—and this tyranny of metrics now threatens the quality of our organizations and lives. In this accessible, and powerful book, Jerry Muller uncovers the damage metrics are causing and shows how we can begin to fix the problem. Filled with examples from business, medicine, education, government, and other fields, the book explains why paying for measured performance doesn’t work, why surgical scorecards may increase deaths, and much more. But Muller also shows that, when used as a complement to judgment based on personal experience, metrics can be beneficial, and he includes an invaluable checklist of when and how to use them. The result is an essential corrective to a harmful trend that increasingly affects us all.
