Yet the greatness of Hinduism - its vitality, its earthiness, its vividness - lies precisely in many of those idiosyncratic qualities that continue to inspire debate today. Wendy Doniger is one of the foremost scholars of Hinduism in the world. With her inimitable insight and expertise Doniger illuminates those moments within the tradition that resist forces that would standardize or establish a

Without reversing or misrepresenting the historical hierarchies, she reveals how Sanskrit and vernacular sources are rich in knowledge of and compassion toward women and lower castes; how they debate tensions surrounding religion, violence, and tolerance; and how animals are the key to important shifts in attitudes toward different social classes. The Hindus brings a fascinating multiplicity of actors and stories to the stage to show how brilliant and creative thinkers - many of them far removed from Brahmin authors of Sanskrit texts - have kept Hinduism alive in ways that other scholars have not fully explored. The Lepidoptera (moths and butterflies) are one of the largest groups of insects with over 150,000 named species. This book deals with their structure and function, environmental significance, and diversity. Part I provides a review of the main body parts with discussion of

function and importance in the lifestyle of the organisms. Further chapters cover feeding, flight, migration, hearing, sound production, defence, and many other aspects of lepidopteran life. The environmental significance of Lepidoptera, which is summarized in Part II, is discussed mainly in terms of larvae as herbivores and as prey. In part III, the author provides a global conspectus of the Lepidoptera. He describes the adults and immature stages of each family, and summarizes their biology, classification, and evolutionary relationships within and between groups. This book will be an

indispensablereference work for naturalists, professional entomologists, and conservationists for years to come.

At last I found what I had been looking for, some long wisps of straw, curiously depressed and flattened in the middle, and I was certain I had found the evidence that would settle Yves Terrec for the rest of his life. It was plain as the nose on your face. The straws were sabot straws, flattened where the foot had pressed them, and sticking straight out where they projected beyond the sabot. Now nobody in St. Gildas used straw in sabots except a fisherman who lived

near St. Julien, and the straw in his sabots was ordinary yellow wheat straw! This straw, or rather these straws, were from the stalks of the red wheat which only grows inland, and which, everybody in St. Gildas knew, Yves Terrec wore in his sabots. I was perfectly satisfied; and when, three hours later, a hoarse shouting from the Bannalec Road brought me to the window, I was not surprised to see Yves Terrec, bloody, dishevelled, hatless, with his strong arms bound behind him, walking with bent head between two mounted gendarmes. The crowd around him swelled every minute, crying: "Parricide!"

parricide! Death to the murderer!" As he passed my window I saw great clots of mud on his dusty sabots, from the heels of which projected wisps of red wheat straw. Then I walked back into the Red Admiral's study, determined to find what the microscope would show on the wheat straws. I examined each one very carefully, and then, my eyes aching, I rested my chin on my hand and leaned back in the chair. I had not been as fortunate as some detectives, for there was no evidence that the straws had ever been used in a sabot at all. Furthermore, directly across the hallway stood a carved Breton chest, and now I

noticed for the first time that, from beneath the closed lid, dozens of similar red wheat straws projected, bent exactly as mine were bent by the lid. I yawned in disgust. It was apparent that I was not cut out for a detective, and I bitterly pondered over the difference between clues in real life and clues in a detective story. After a while I rose, walked over to the chest and opened the lid. The interior was wadded with the red wheat straws, and on this wadding lay two curious glass jars, two or three small vials, several empty bottles labelled chloroform, a collecting jar of cyanide of potassium, and a

book. In a farther corner of the chest were some letters bearing English stamps, and also the torn coverings of two parcels, all from England, and all directed to the Red Admiral under his proper name of "Sieur Louis Jean Terrec, St. Gildas, par Moëlan, Finistère."

Matthew Oates has led a butterflying life. Naturalist, conservationist and passionate lover of poetry, he has devoted himself to these exalted creatures: to their observation, to singing their praises, and to ensuring their survival. Based on fifty years of detailed diaries, In Pursuit of Butterflies is the chronicle of this

life. Oates leads the reader through a lifetime of butterflying, across the mountain tops, the peat bogs, sea cliffs, meadows, heaths, the chalk downs and great forests of the British Isles. Full of humour, zeal, digression, expertise and anecdote, this book provides a profound encounter with one of our great butterfly lovers, and with a half-century of butterflies in Britain.

A wider context is provided by considering long-term trends in distribution, derived from 200 years of recording and recent changes elsewhere in Europe. In addition, the book summarises the wealth of new information about butterfly ecology, incorporates findings from the Butterfly Monitoring Scheme, describes and illustrates the habitats favoured by particular communities of butterflies, and presents a vision of how these popular insects might be conserved in the future. As such, it will be invaluable to a wide range of readers, from amateur naturalists to professional conservationists and policy makers.

Hill had climbed 180 feet up into the tree high on a mountain on December 10, 1997, for what she thought would be a two- to three-week-long "tree-sit." The action was intended to stop Pacific Lumber, a division of the Maxxam Corporation, from the environmentally destructive process of clear-cutting the ancient redwood and the trees around it. The area immediately next to Luna had already been stripped and, because, as many believed, nothing was left to hold the soil to the mountain, a huge part of the hill had slid into the town of Stafford, wiping out many homes. Over the course of what turned into an historic civil action, Hill endured El Nino storms, helicopter harassment, a ten-day siege by company security guards, and the tremendous sorrow brought about by an old-growth forest's destruction.
