Leading clinical researchers provide essential background knowledge on each problem, describe the conceptual and empirical bases of their respective approaches, and illustrate the nuts and bolts of evidence-based assessment and intervention.

Emotional disorders in youth frequently overlap or co-occur, and yet many of the existing, effective therapies available for children and adolescents with emotional disorders target just one or a smaller subset of these problems. The Unified Protocols for Transdiagnostic Treatment of Emotional Disorders in Children and Adolescents, based in groundbreaking research from Jill Ehrenreich-May, David H. Barlow, and colleagues, suggest that there may be a simpler and more efficient method of utilizing effective strategies, such as those commonly included in CBT, in a manner that addresses the broad array of emotional disorder symptoms in children and adolescents. The child and

This collection of David H. Barlow's key papers are a testimony to the collaborative research that he engendered and directed with associates who now stand with him at the forefront of experimental psychopathology research and in the treatment of anxiety and related disorders. His research on the nature of anxiety and mood disorders resulted in new

conceptualizations of etiology and classification. This research led new treatments for anxiety and related emotional disorders, most notably a new transdiagnostic psychological approach that has been positively evaluated and widely accepted. forces: biological, psychological, social, cultural, familial, and political forces, the only approach that today's scientists would subscribe to. Writing in narrative, forceful prose, the authors challenge readers to think about how and why people become troubled and what is done to help them. Throughout the book, Barlow and Durand masterfully integrate concepts with case examples and citations from the literature to demonstrate the connection between research and practice. And, because in contemporary thinking therapy cannot be viewed separately from the disorder, the latest and most effective treatments (both drug and psychosocial) are discussed within the context of the disorder.

to deliver effective psychological and pharmacological treatments.

Integrating insights from emotion theory, recent advances in cognitive science and neuroscience, and increasingly important findings from developmental psychology and learning, David H. Barlow comprehensively examines the phenomena of anxiety and panic, their origins, and the roles that each plays in normal and pathological functioning. Chapters coauthored by Barlow with other leading experts then outline what is currently known about the classification, presentation, etiology, assessment, and treatment of each of the DSM-IV anxiety disorders. A definitive resource for researchers and clinicians, this is also an ideal text for graduate-level courses.
