Developed for the Ultimate Introductory Engineering Course Introduction to Engineering: An Assessment and Problem-Solving Approach incorporates experiential, and problem- and activity-based instruction to engage students and empower them in their own learning. This book compiles the requirements of ABET, (the organization that accredits most US engineering, computer science, and technology programs and equivalency evaluations to international engineering programs) and integrates the educational practices of the Association of American Colleges and Universities (AAC&U). The book provides learning objectives aligned with ABET learning outcomes and AAC&U high-impact educational practices. It also identifies methods for overcoming institutional barriers and challenges to implementing assessment initiatives. The book begins with an overview of the assessment theory, presents examples of real-world applications, and includes key assessment resources throughout. In addition, the book covers six basic themes: Use of assessment to improve student learning and educational programs at both undergraduate and graduate levels Understanding and applying ABET criteria to accomplish differing program and institutional missions Illustration of evaluation/assessment activities that can assist faculty in improving undergraduate and graduate courses and programs Description of tools and methods that have been demonstrated to improve the quality of degree programs and maintain accreditation Using high-impact educational practices to maximize student learning Identification of methods for overcoming institutional barriers and challenges to implementing assessment initiative A practical guide to the field of engineering and engineering technology, Introduction to Engineering: An Assessment and Problem-Solving Approach serves as an aid to both instructor and student in developing competencies and skills required by ABET and AAC&U.

This book examines recent developments in Latin American biofuel production. Taking "sustainable development" as a central theme, each chapter considers one country in the region and explores how biofuel production is evolving given concerns about food sovereignty, trade and other social issues. Environmental conservation, as well as an increasingly complex and globalized economic structure, is also taken into account. The contributions to this volume critically explore the ways in which biofuel production in Latin America impact social, economic and environmental systems: the so-called "three pillars of sustainability". Numerous stakeholders, drawn from government, industry, civil society and academia have attempted to define "Sustainable Development" in the context of biofuel production and to operationalize it through a series of principles, criteria, and highly specific indicators. Nevertheless, it remains a fluid and contested concept with deep political and social ramifications, which each chapter explores in detail.

In recent decades, extreme rains and drought have struck urban regions in Africa like never before. Nevertheless, limited information is available on which to base development of early warning systems, identification of high-risk zones and formulation of local action plans. This book is about how to build the knowledge necessary for planning adaptation to climate change in Sub-Saharan cities. It brings together lessons learned from international development actions conducted by a number of scholars in disciplines ranging from meteorology and hydrogeology to urban planning and environmental management. Selected methods to assess the impacts of extreme weather and ecological stress are presented along with possible approaches to improve the adaptive capacity of Sub-Saharan cities through institutional measures at the local government level. The book is addressed to graduate students, researchers and practitioners interested in enhancing their knowledge and skills in order to integrate climate change into applied research and development projects in urban Africa.

This book explores the persistence of the governance gap with respect to the human rights-impacting conduct of transnational extractive corporations operating in zones of weak governance. Through their account with a fascinating case study of Talisman Energy's experience in Sudan, informed by their own experience as members of the 1999 Canadian Assessment Mission to Sudan (Harker and ... on new governance, reflexive law and responsive law theories, the authors assess legal and other non-binding governance mechanisms that have emerged since that time, including the UN Guiding Principles on Business and Human Rights. They conclude that such mechanisms are incapable of systematically preventing human rights violating behaviour by transnational corporations, or of assuring accountability or recompense for victims of such violations. The authors contend that home state regulation, while not a silver bullet, has a crucial role to play in regulating such conduct. They pick up where Representative John Ruggie's Guiding Principles on Business and Human Rights left off, and propose an innovative, robust and adaptable template for strengthening the regulatory framework of human rights. The model draws insights from the theoretical literature, leverages existing public, private, transnational, national, 'soft' and hard regulatory tools, and harnesses the specific strengths of state-based regulation. This book will be of interest to academics, policy makers, students, civil society and business leaders.

New York City has long been a generative nexus for the transnational Latin music scene. Currently, there is no other place in the Americas where such large numbers of people from throughout the

together to make music. In this book, Benjamin Lapidus seeks to recognize all of those musicians under one mighty musical sound, especially those who have historically gone unnoticed. Based on oral histories, interviews, and musicological analysis, Lapidus examines how interethnic collaboration among musicians, composers, dancers, instrument builders, and music teachers in New York City led to the study, creation, performance, and innovation of Latin music. Musicians specializing in Spanish Caribbean music in New York cultivated a sound that was grounded in tradition, including classical Spanish Caribbean folkloric music. For the first time, Lapidus studies this sound in detail and in its context. He offers a fresh understanding of how musicians made and formally transmitted Spanish Caribbean popular music in New York City from 1940 to 1990. Without diminishing the historical facts of segregation and racism the musicians experienced, Lapidus treats music as a unifying force. By giving voice to those musicians who helped bridge the gap between cultural and musical backgrounds, he recognizes the impact of entire ethnic groups who helped change music in New York. The study of these musicians through interviews and musical transcriptions helps to characterize the specific and identifiable New York City Latin music aesthetic that has come to be emulated internationally. European integration is an open-ended, ongoing process which has been deeply challenged by integral world capitalism. This study explores the present EU foundational dilemma, looking at the present relationship between the ideal model of integration and the reality of the 21st century. Including contributions from leading theorists, this volume explores the ways and extent to which the present could create a politico-legal space for new possibilities and opportunities for action. The authors discuss the current role of the EU, and whether it aspires to be a democratic polity or a functional one based on inter-governmental bargaining. The chapters question whether the future of European integration after the crisis will be paved by decisions which conflict with its Treaty basis, and how it might be replaced by alternatives which would do more than echo the compulsions of the global market. Issues are analysed from a historical perspective to see what can be learnt from its past and to explore the opportunities for the future. With contributions from prominent international legal and political scholars, the book will be of interest to academics, students and policy-makers working in these areas.

The Canadian Senate has long been considered an institutional pariah, viewed as an undemocratic, outmoded warehouse for patronage appointments and mired in spending and workload scandals. In 2014, the federal government was compelled to refer constitutional questions to the Supreme Court relating to its attempts to enact senatorial elections and term limits. Constitutional Pariah explores the aftermath of Reference re Senate Reform, which barred major unilateral alteration of the Senate by Parliament. Ironically, the decision resulted in one of the most sweeping parliamentary reforms in Canadian history, creating a pathway to informal changes in the appointments process that have curbed patronage and partisanship. Despite reinvigorating the Senate, Reference re Senate Reform has far-reaching implications for constitutional reform in other contexts. Macfarlane's sharp critique suggests that the Court's nebulous approach to the amending formula raises the spectre of a frozen constitution, unable to evolve with the country.

This book constitutes the thoroughly refereed proceedings of the 39th International Workshop on Graph Theoretic Concepts in Computer Science, WG 2013, held in Lübeck, Germany, in June 2013. The 34 revised full papers presented were carefully reviewed and selected from 61 submissions. The book also includes two abstracts. The papers cover a wide range of topics in graph theory related to computer science, such as structural graph theory with algorithmic or complexity applications; design and analysis of sequential, parallel, randomized, parameterized and distributed graph and network algorithms; computational complexity of graph and network problems; computational geometry; graph grammars, graph rewriting systems and graph modeling; graph drawing and layouts; random graphs and models of the web and scale-free networks; and support of these concepts by suitable implementations and applications.

"Slow violence" from climate change, toxic drift, deforestation, oil spills, and the environmental aftermath of war takes place gradually and often invisibly. Rob Nixon focuses on the inattention we have paid to the lethality of many environmental crises, in contrast with the sensational, spectacle-driven messaging that impels public activism today.

The challenge of maintaining dictatorial regimes through control, co-optation and coercion while upholding a facade of legitimacy is something that has concerned leaders throughout the Middle East and beyond. Nowhere is this more evident than in the Syria ruled by the Asads, both Hafiz and his son Bashar. Drawing on the example of the General Union of Syrian Women (founded in 1967), Esther Meininghaus offers new insights into how the Syrian Ba'thist regimes attempted to move beyond mere satisfaction with the compliance of the citizenry and to consolidate their rule amongst the local population. Meininghaus argues that this was partially achieved through providing welfare services delivered by the Union as one of the state-led mass organisations. In this way, she suggests, these regimes did not only aim to undermine opposition and to create the illusion of consent, but they factually catered to local needs and depended on consent. Based on archival material, interviews and statistics, *Creating Consent in Ba'thist Syria* will shed new light on mass organisations as a crucial institution of Ba'thist state building and, more broadly, the construction of the Asad regimes.

Fully restructured to complement how media law is taught today in the digital age, this third edition explores recent updates in the law including the outcomes of the Google Spain case and the 'right to be forgotten', the use of drones in breach of privacy laws, internet libel and the boundaries of media freedom and press regulation following the Leveson inquiry. Media & Entertainment Law uses the most up-to-date authorities to explore privacy and confidentiality subjects, such as the Prince Charles 'black spider' letters, the Maximilian Schrems and the celebrity superinjunction PJS v Newsgroup Newspapers cases. The book also covers defamation, contempt of court and freedom of information, plus Scots law. This book provides an article-by-article commentary on the text of the Chemical Weapons Convention (CWC) and its Annexes, one of the cornerstone disarmament and arms control agreements. It requires the verified elimination of an entire category of weapons of mass destruction and their means of production by all its States Parties within established time lines, and that prohibits any activities to develop or otherwise acquire such weapons. Cross-cutting chapters alongside the detailed commentary, by those intimately involved in the development of the Convention, assess the history of the efforts to prohibit chemical weapons, the adoption of the Convention and the work of the Preparatory Commission, the entry into force of the Convention to the Second Review Conference, and the need for a new approach for the governance of chemical weapons. Written by those involved in its creation and implementation, this book critically reviews the practices adopted in implementing the Convention, as well as the challenges ahead, and provides legal commentary on, and guidance for, its future role. It assesses how to adapt its implementation to advances in science and technology, including the discovery of new chemicals and the development of biochemical 'non-lethal' compounds that influence behaviour. It addresses the legal framework within which the Organization for the Prohibition of Chemical Weapons (OPCW) takes decisions, both with regard to the OPCW's own regulatory framework and regarding wider international norms, accepted principles, and practices. The Commentary draws conclusions on how the prohibitions against chemical weapons can be strengthened and the stature of the OPCW protected. It highlights the involvement of industry and academia in this prohibition, creating a symbiosis between effective governance and the legal framework of the Convention. This book is an authoritative,

scholarly work for anyone interested in the Chemical Weapons Convention, in international disarmament and arms control law, and in the work of international organizations, and a practical guide for individuals and institutions involved in the Convention's day-to-day implementation.

How does structural economic change look and feel? How are such changes normalized? Who represents hope? Who are the cautionary tales? Unfinished Business argues that U.S. deindustrialization cannot be understood apart from issues of race, and specifically apart from images of, and works by and about African Americans that represent or resist normative or aberrant relationships to work and capital in transitional times. It insists that Michael Jackson's performances and coverage of his life, plays featuring Detroit, plans for the city's postindustrial revitalization, and Detroit installations The Heidelberg Project and Mobile Homestead have something valuable to teach us about three decades of structural economic transition in the U.S., particularly about the changing nature of work and capitalism between the mid 1980s and 2016. Jackson and Detroit offer examples of the racialization of deindustrialization, how it operates as a structure of feeling and as representations as well as a shift in the dominant mode of production, and how industrialization's successor mode, financialization, uses imagery both very similar to and very different from its predecessor.

With exclusive access to the Haughey archives, Gary Murphy presents a reassessment of Charles Haughey's life and legacy. Saint or sinner? Charles Haughey was, depending on whom you ask, either the great villain of Irish political life or the benevolent and forward-thinking saviour of a benighted nation. He was undoubtedly the most talented and influential politician of his generation, yet the very roots of his success - his charisma, his intelligence, his ruthlessness, his secrecy - have rendered almost impossible any objective evaluation of his life and work. That is, until now. Based on unfettered access to Haughey's personal archives, as well as extensive interviews with more than eighty of his peers, rivals, confidants and relatives, Haughey is a rich and nuanced portrait of a man of prodigious gifts, who, for all his flaws and many contradictions, came to define modern Ireland. 'A superbly balanced exploration of the life and politics of one of the most fascinating figures in 20th century Ireland.' Professor John Horgan 'An indispensable read for anyone with an interest in modern Irish history.' David McCullagh 'Offers much new detail - and not a few surprises - about the personality and career of a political titan who is still, in equal measure, revered and reviled in 21st century Ireland.' In recent decades, asylum has emerged as a highly politicized European issue. The term 'asylum seeker' has suffered a negative perception and has been associated with notions of illegality and criminality in mainstream media. These misconceptions have been supported by politicians as a distraction from economic and political uncertainties with the result that asylum seekers have been deprived of significant rights. This book examines the effect of recent attempts of harmonization on the identification and protection of refugees. It considers the extent of obligations on the state to admit and protect refugees and examines the 1951 Refugee Convention. The motivations of European legislators and legislation concerning asylum procedures and reception conditions are also analysed. Proposals and initiatives for refugee movements and determinations are examined and assessed. The author makes suggestions for better protection of refugees while responding to the security concerns of States, and questions whether European law and policy is doing enough to uphold the fundamental right to seek and enjoy asylum as set out in the Universal Declaration of Human Rights. This book takes a bold look at a controversial issue and generates discussion for those involved in the fields of human rights, migrational and transnational studies, law and

society and international law.

Ongoing ideological or political conflicts in the modern world have led to appalling human rights violations against North Korean defectors who attempt to escape from and seek freedom. Although some North Korean defectors have survived the life-threatening escape journey and arrived in free countries, their overwhelming challenges they now face a range of issues and challenges in resettlement, adjustment, and learning process in new and competitive societies. North Korean Defectors in a New World articulates several hurdles that North Korean defectors encounter, from their long journey of escape to assimilation in their new homes. This book seeks to raise international rights violations against North Koreans, and to emphasize the importance of helping them overcome the substantial cultural gaps between North Korea and their new homes. Why are Americans being forced to consider homosexual acts as morally acceptable? Why has the US Supreme Court accepted the validity of same-sex "marriage", which is unheard of in the history of Western or any other civilization? Where has the "gay rights" movement come from, and how has it so easily conquered America? The answer lies in the rationalization of sexual misbehavior. The power of rationalization—the means by which one mentally transforms wrong into right—drives the gay rights movement, gives it character, and makes its advocates indefatigable. The homosexual cause moved naturally from a plea for tolerance to cultural conquest because the security of its rationalization and universal acceptance. In other words, we all must say that the bad is good. At stake in the rationalization of homosexual behavior is the notion that human beings are created given by their Nature. The understanding that things have an in-built purpose is being replaced by the idea that everything is subject to man's will and power, which is unlimited. This is what the debate over homosexuality is really about—the Nature of reality itself. The outcome of this dispute will have consequences that reach far beyond America's major institutions have been transformed—its courts, its schools, its military, its civic institutions, and even its diplomacy. The further institutionalization of the triumph of force over reason, thus undermining the very foundations of the American Republic.

This edited volume presents a comprehensive and coherent interdisciplinary analysis of challenges and possibilities for sustainable governance of the Baltic Sea ecosystem by combining knowledge from natural and social sciences. Focusing on the Ecosystem Approach to Management (EAM) and associated multi-level, multi-sector and multi-actor challenges, the book provides up-to-date descriptions of environmental governance structures and processes at the macro-regional Baltic Sea level. Organised in two parts, Part 1 presents in-depth case studies of environmental governance practices and key environmental problems - eutrophication, chemical pollution, overfishing, oil discharges and invasive species. Part 2 analyses and compares governance challenges and opportunities across the field, focusing on governance structures and EAM implementation, knowledge integration and science support, as well as stakeholder communication and participation. Based on these cross-case comparisons, the book draws a set of general conclusions on possible ways of improving the governance of the Baltic Sea by promoting what are identified as vital functions of environmental governance: coordination, interdisciplinarity, precaution, deliberation, communication and adaptability.
