

California Flora

Excerpt from A Popular California Flora: Or, Manual of Botany for Beginners; Containing Descriptions of Flowering Plants Growing in Central California, and Westward to the Ocean, With Illustrated Introductory Lessons
Plants belonging to the Parsnip, Aster, rillow, Oak and Pine Families, are not de scribed, being mostly too difficult for beginners, or of little interest to them. About the Publisher
Forgotten Books publishes hundreds of thousands of rare and classic books. Find more at www.forgottenbooks.com
This book is a reproduction of an important historical work. Forgotten Books uses state-of-the-art technology to digitally reconstruct the work, preserving the original format whilst repairing imperfections present in the aged copy. In rare cases, an imperfection in the original, such as a blemish or missing page, may be replicated in our edition. We do, however, repair the vast majority of imperfections successfully; any imperfections that remain are intentionally left to preserve the state of such historical works.

"This impressive, streamlined new field guide to plants of California deserts is based on The Jepson Manual and is truly a handbook to be carried in the field. It offers new introductory discussions, many new illustrations, revised user-friendly keys, updated distribution information, flowering times. . . and handsome color photos of many species. This marvelous book demonstrates that our deserts are not barren wastes but treasure houses filled with an abundance of floristic riches."—Robert Ornduff, author of Introduction to California Plant Life
"This is a marvelously useful guide to the plants of California's deserts, clearly-written and well-organized. An invaluable companion to those who delight in the unusual and beautiful plants of these scenic areas."—Peter H. Raven, Director, Missouri Botanical Garden
"This much-needed volume incorporates new information about the status and range of many California desert plants. This book will facilitate access to information about our deserts, and will lead to increased respect and attention to them. We warmly welcome it."—Jake Sigg, President, California Native Plant Society

Revised Edition

A Popular California Flora

A Popular California Flora, Or, Manual of Botany for Beginners

Summaries of the Major Plant Families

Both American Indians and the pioneers knew and used many different plant species-for food, fibers, medicine, tools, and other purposes. This unique book is a guide to identifying more than 220 such plants. But it goes much further-it also tells the reader how to prepare, cook, and otherwise use them. Some of the dishes for which recipes are given have won culinary prizes. All have been tested not only by the author but also by her students and by journalists-who have been uniformly surprised and impressed. The plants are organized by habitat communities. Description, photos, drawings, and distribution information are given. Where poisonous look-alikes exist, they too are illustrated. Much fascinating information about Indian uses of native and introduced species is included. The author emphasizes conservation considerations; the aim of the book is to educate the reader about intriguing uses of the plants, and to tell how to gather and use the most palatable and abundant species without damaging the environment.

A Flora of the Marshes of California

This book includes descriptions of more than 4,000 species, of which more than 600 are illustrated with line drawings. The bulk of the work is devoted to the systematic treatment of vascular plants, which are grouped alphabetically by family, genus, and species. There are keys for the identification of all taxa.

Harold Biswell's decades of research and field experience were a major factor in developing policies of controlled or prescribed burning, which mimics or reintroduces the natural fire cycle. This comprehensive study introduces the principles and practices of prescribed burning, which apply far beyond California, within a historical and ecological perspective. Available for the first time in paperback, with a new foreword by James Agee, this book places Biswell's study—and his legacy—in the context of recent developments in the field.

Supplement to A California Flora

The Santa Cruz Mountains, an area covering almost 1,400 square miles from San Francisco southward to the Monterey County line, are a part of the Coast Range of Central California. The Mountains and the adjacent lowlands have a rich vascular flora, and about 1,800 species, subspecies, varieties, forms, and hybrids of ferns, conifers, and flowering plants, distributed among 168 families, have been reported from the region. This comprehensive flora, the first of the area, is designed for use by both the serious beginner and the trained botanist. The flora is illustrated by 250 line drawing and ten photographs. In addition, there is a map of the Santa Cruz Mountains area and a stratigraphic profile of the rock formations. The stratigraphic profile and a section on geology have been contributed by Dr. Earl E. Brabb of the United States Geological Survey. Distributional notes, keys to families, genera, and species, pertinent synonymy, a glossary of technical terms, an index of place names, and common0name and scientific-name indexes form the body of the text. The Introduction contains a description of the geography of the Santa Cruz Mountains and adjacent lowlands, seconds on the geology and climate, a brief discussion and analysis of the vegetation and floristic affinities of the area, and a history of past botanical collecting. A selected list of references has been appended to allow the interested individual to pursue his studies further.

This title is part of UC Press's Voices Revived program, which commemorates University of California Press’s mission to seek out and cultivate the brightest minds and give them voice, reach, and impact. Drawing on a backlist dating to 1893, Voices Revived makes high-quality, peer-reviewed scholarship accessible once again using print-on-demand technology. This title was originally published in 1968.

Unlike some other reproductions of classic texts (1) We have not used OCR(Optical Character Recognition), as this leads to bad quality books with introduced typos. (2) In books where there are images such as portraits, maps, sketches etc We have endeavoured to keep the quality of these images, so they represent accurately the original artefact. Although occasionally there may be certain imperfections with these old texts, we feel they deserve to be made available for future generations to enjoy.
