in India. This book, ten years after the attack, aims to advance the academic discourse on the subject. The book traces the evolution of the coastal security construct in India and dwells extensively on the multifarious initiatives taken since '26/11'. The book also undertakes a comprehensive examination of multiple elements of the coastal security construct, and makes policy recommendations for further strengthening coastal security in India. A useful, updated, and insightful resource for academics, policymakers, practitioners, as also those interested in the subject.

In the first IEG evaluation of World Bank Group support to youth employment, the findings reveal short-term effects, limited positive results, and lack of evidence. The focus is on investment climate, labor market, and skills. An evidence-based, strategic approach using youth-specific, complementary interventions and multisectoral teams is needed.

how information and communication technology (ICT) is being diffused throughout the Asia Pacific region to facilitate socio-economic development. This third annual review provides an analytical overview of the state of ICT4D in the Asia Pacific region. It covers 31 countries and economies including - for the first time - North Korea. Each country is dealt within a separate chapter, which attempts to provide comprehensive coverage of the various aspects of ICT4D in the concerned country at the time of writing (in 2006). The chapters have been written by a team of authors representing different sectors, such as government, academia, industry, and civil society.

Private enterprises in advanced economies have been learning to use information and communication technology (ICT) to innovate and

transform their processes, products, services and business models, significantly improving productivity and competitiveness. Moreover, the ICT industry itself has become a major source of job creation and a contributor to economic growth and business transformation. A key question today is whether and how developing countries can learn to benefit from the ICT revolution, and what roles the government and private sector can play.

Already, a number of developing countries have been inspired by the example of India and China, and are now seeking to jump on the outsourcing bandwagon. Nevertheless, with few exceptions in

the developing world, little attention has been paid by policymakers and practitioners to invest systematically and proactively in ICT-enabled growth, poverty reduction and grassroots innovation. Most communities and small and medium-sized enterprises in developing countries, for example, face multiple constraints to adopting and leveraging this general purpose technology, and lack the capabilities for maximizing its potential. In "Enabling Enterprise Transformation", Nagy Hanna draws on his rich experience of over 35 years at the World Bank and other aid agencies as a development strategist and ICT policy expert,

the most current research, and best practices from around the world to provide practical tools for promoting economic and social transformation through ICT. He assesses various initiatives to develop and diffuse ICT, such as innovation funds, incubators, parks, public-private partnerships, and comprehensive promotion programs. He argues for the strategic options now open for developing countries to participate in ICT production, to deploy ICT to transform industries and services, and to leverage ICT as a new national infrastructure for improving the business environment and enhancing the competitiveness of

the whole economy. The challenge for leaders in developing countries is to create such social and institutional dynamics for learning about ICT use and adaptation at many levels. Lessons gained so far from programs to build these social learning and innovation capabilities at the institutional and grassroots levels should be shared among developing countries, and a dialogue among business leaders, policymakers, development agencies, educational institutions, and the general citizenry must be advanced.

A major source of financing for the poor and no longer a niche industry Over the past four decades, microfinance—the provision of loans, savings, and insurance to small businesses and entrepreneurs shut out of traditional capital markets—has grown from a niche service in Bangladesh and a few other countries to a significant global source of financing. Some 200 million people globally now receive support from microfinance

institutions, with most of the recipients in the developing world. In the beginning, much of the microfinance industry was managed by non-governmental organizations, but today the majority of these institutions are commercial and regulated by governments, and they provide safe places for the poor to save, as well as offering much-needed capital and other financial services. Now out of infancy, the microfinance industry faces major challenges, including its ability to deal with mobile banking and other technology and concerns that some markets are now over-saturated with microfinance. How the industry deals with these and other challenges will

determine whether it will continue to grow or will be subsumed within the larger global financial sector. This book is based on the results of a workshop at Lehigh University among thirty-four leaders in the industry. The editors, working with contributions from more than a dozen leading authorities in the field, tell the important story of how microfinance developed, how it has met the needs of hundreds of millions of people, and they address key questions about how it can continue to meet those needs in the future.

the private sector in leading the reconstruction initiatives. Given that aid and debt relief, the traditional remedies for dependency and underdevelopment, have not been effective, the private sector is increasingly viewed as a major player in the revival of regional economies. Private sector support, however, requires government intervention to improve investment climates, curb corruption, strengthen the security sector, and reduce the cost of doing business. The contributors discuss ways in which West African governments can encourage the greater involvement of business in

public administration programs in South Asia, yet existing knowledge on them is fragmented at best. Bringing together leading scholars from these countries, this book provides both an insider perspective and a scholarly look at the challenges and accomplishments in the region. Focusing on the machinery of government, the book explores questions such as: What is the history of public administration development? How are major decisions made in the agencies? Why are anti-corruption efforts so much a challenge? What is the significance of intergovernmental relations? What is the success of

administrative reform? What are examples of successful social development programs? How successful is e-government, and what are its challenges? Why is civil service reform difficult to achieve? How is freedom of information being used as a means to combat corruption and invoke grassroots activism? What can be learned from the successes and failures? While public administration practice and education have become considerably professionalized in the last decade, a sufficiently in-depth and well-rounded reference on public administration in these countries is sorely lacking. Most

available books tackle only aspects of public administration such as administrative reforms, civil service, economic developments, or public policy, and are country specific. None provide the in-depth analysis of the sphere of public action in South Asia found in this book. What have been the consequences of recent regulatory initiatives on international financial centers in small countries? This study of three small Commonwealth countries--Barbados, Mauritius and Vanuatu--suggests that the costs of implementing these new standards have exceeded any identifiable benefits for the countries concerned. The main factor explaining the adoption of the new standards, in all three countries, is the fear of being blacklisted by international organizations in the event of non-compliance, rather than any identified benefit in terms of increased competitiveness. The authors consider how policy on anti-money laundering should be developed in the future, taking into account the

particular concerns of small developing countries. The book will be of interest to all those engaged in setting international standards for financial regulation, and those regulating the finance industry in both large and small countries.
