

While the world of education moves toward the end of the crisis brought forth in 2020, we should recognize all the opportunities that remote education can bring us. To fully engage those opportunities, we need to learn more about the tools we use. As you were teaching your online classes, you were probably considering things like, How can I choose a good microphone? How can I stop students from interrupting each other? How can I best exploit breakout rooms? How can I use Zoom for pre-recording presentations? You'll also find out more about important areas like Zoom's screen sharing system, important security measures, coping with Zoom fatigue, and using Zoom for academic conferences. Most of us learned enough about Zoom to get us through our classes, but Zoom is capable of much more. This second book of the Teaching With Zoom series discusses best practices, supplementary hardware and software choices, and tips to make your Zoom classroom safer, more productive, and more enjoyable.

This book has been developed as a forest inventory textbook for students and could also serve as a handbook for practical foresters. We have set out to keep the mathematics in the book at a fairly non-technical level, and therefore, although we deal with many issues that include highly sophisticated methodology, we try to present first and foremost the ideas behind them. For foresters who need more details, references are given to more advanced scientific papers and books in the fields of statistics and biometrics. Forest inventory books deal mostly with sampling and measurement issues, as found here in section I, but since forest inventories in many countries involve much more than this, we have also included material on forestry applications. Most applications nowadays involve remote sensing technology of some sort, so that section II deals mostly with the use of remote sensing material for this purpose. Section III deals with national inventories carried out in different parts of world, and section IV is an attempt to outline some future possibilities of forest inventory methodologies. "An illustrated lifestyle cookbook on the Swedish tradition of fika--a twice-daily coffee break--including recipes for traditional baked goods, information and anecdotes about Swedish coffee culture, and the roots and modern incarnations of this cherished custom. Sweden is one of the world's top coffee consuming nations, and the social coffee break known as fika is a cultural institution. A time to take a rest from work and chat with friends or colleagues over a cup and a sweet treat, fika is part of the national identity and a marker of the Swedish ideal of taking time to appreciate life's small joys. Fika can be had alone or in groups, indoors or outdoors, while traveling or while at home, and Fika is full of inspiration to elevate these daily coffee breaks. In this adorable and illustrated cookbook, Anna Brones and Johanna Kindvall share more than 45 classic recipes from their motherland--from cinnamon buns and ginger snaps to rhubarb cordial and rye bread--while also examining what fika means to Swedes and how we can all integrate its values into our daily lives."--
