This book discusses canine and feline skin cytology and the importance of this diagnostic tool in interpreting skin lesions.

File Type PDF  
Canine And Feline  
Gastroenterology

With more than 600 clinical and cytological color pictures, it explains the cytological patterns observed in all cutaneous inflammatory and neoplastic lesions in cats and dogs, as well as cutaneous metastasis of non-primary skin neoplasms. The first part of the book describes cell morphology and

File Type PDF  
Canine And Feline  
Gastroenterology

cytological patterns, providing an overview of the normal structure of the skin. In the second chapter, readers learn how to choose the best techniques for different types of lesions. Further chapters present the cytological findings in the main inflammatory and neoplastic skin diseases. By focusing on the

File Type PDF  
Canine And Feline

macroscopic aspects of the lesions from which the cells are collected, it helps readers to interpret cytological specimens. The final chapter explores the cytology of cutaneous metastasis from internal organs or accessory glands. This book offers veterinary students and practitioners alike an essential diagnostic tool.

symptoms and  
diagnostic methods,  
descriptions of  
digestive tract  
disorders by organ  
system, and a series of  
sample GI cases.

Logically organized  
into three easy-  
reference sections and  
expertly written by  
recognized specialists,  
this complete,
