JUST GOT THE EOS 80D AND CAN'T QUITE WORK YOUR WAY AROUND IT TO GET THE KIND OF PICTURES YOU BELIEVE IT SHOULD PRODUCE? Read on.. At first glance, the difference between the EOS 80D and its successor. The differences, however, are groundbreaking with a 32.5MP APS-C CMOS sensor. Historically, the resolution of APS-C cameras has not been that high - meaning the 90D (and the EOS M6 Mark II with the same sensor) offers the resolution of a full-frame camera. The advantage of having the kind of resolution means you'll be able to get more detail when giving up the flexibility of zooming, allowing you to zoom in closer to your subject without compromising image quality. While the higher resolution is a welcome benefit, the high ISOs made possible by the sensor is a bit of a trade-off. The high ISOs and video resolution have to be shrunk to fit a smaller sensor. However, it's Canon's latest Digic 8 image processor that gives the 90D a major performance boost over the 80D and its Digic 6 predecessor. The ability to shoot 4K video, which the 80D does not do, is a major advantage. And, unlike all other Canon cameras, the new EOS R and EOS RP include, in addition to the sensor, a long-awaited feature for the company. Video themselves recorded in MP4 file format in either 4K UHD (3840 x 2160) quality or Full HD (1920 x 1080) at up to 60fps. Standard HD (1280 x 720) at 60fps, and with a maximum duration of 30 minutes. The Digic 8 processor also uses the sensor when it comes to speed and ISO range. Ready to explore your camera device and produce super-clear and beautiful images? Read this guide to get started.

EOS from M5 is a mirrorless camera from Canon ideal for both stills and videos shoots. The image sensor has Dual Pixel CMOS AF and Digital IS 5-axis image stabilization for a steady video recording.

Technology giant Canon U.S.A. Inc. in March of 2016 announced to the public, the release of its newest digital camera. The basic structure of the EOS Rebel T8i/850D camera is similar to that of its predecessor model EOS Rebel T6i. This camera has a 24 Megapixel APS-C sensor. The new generation sensor with a dual-chip can capture very good images in high-contrast conditions. Due to the presence of the Dual-Chip CMOS AF sensor, it is much faster and has a much larger coverage area. It is possible to make some good photos by using the Dual-Chip CMOS AF sensor. It helps in improved AF and AF-C performance as compared to the EOS Rebel T6i. Furthermore, the user can use this camera in low-light situations. In the photos captured in low light, it is possible to see a very bright bokeh effect. Also, it has better autofocus ability than the EOS Rebel T6i.
