The Best of Roger Ebert: Second Edition

Praise for the first edition: "...a brave and fascinating exploration of an area that has so far been rather neglected by both historical and literary critics. *The Beast Within* provides extremely valuable information on the legal and cultural background of the human-animal relationship..." -- *Studies in the Age of Chaucer*

This important book offers a unique exploration of the use of and attitude towards animals from the 4th to the 14th centuries. *The Beast Within* explores the varying roles of animals as property, food and sexual objects, and the complex relationship that this created with the people and world around them. Joyce E. Salisbury takes an interdisciplinary approach to the subject, weaving a historical narrative that includes

economic, legal, theological, literary and artistic sources. The book shows how by the end of the Middle Ages the lines between humans and animals had blurred completely, making us recognise the beast that lay within us all. This new edition has been brought right up to date with current scholarship, and includes a brand new chapter on animals on trial and animals as human companions, as well as expanded and updated discussions on fables and saints, and a new section on 'bestial humans'. This important and provocative book remains a key work on the historical study of animals, as well as in the field of environmental history more generally, and also provides crucial context to ongoing debates on animal rights and the environment. Contributed articles.

By explaining how to sire multicolored horses, produce nuts without shells, and create an egg the size of a human head, Giambattista Della Porta's Natural Magic (1559) conveys a fascination with tricks and illusions that makes it a work difficult for historians of science to take seriously. Yet, according to William Eamon, it is in the "how-to" books written by medieval alchemists, magicians, and artisans that modern science has its roots. These compilations of recipes on everything from parlor tricks through medical remedies to wool-dyeing fascinated medieval intellectuals because they promised

access to esoteric "secrets of nature." In closely examining this rich but little-known source of literature, Eamon reveals that printing technology and popular culture had as great, if not stronger, an impact on early modern science as did the traditional academic disciplines.

Since 1958 the Maritime Administration has continuously conducted instructions in use of collision avoidance radar for qualified U.S. seafaring personnel and representatives of interested Federal and State Agencies. Beginning in 1963, to facilitate the expansion of training capabilities and at the same time to provide the most modern techniques in training methods, radar simulators were installed in Maritime Administration's three region schools. It soon became apparent that to properly instruct the trainees, even with the advanced

equipment, a standardize up-to-date instruction manual was needed. The first manual was later revised to serve both as a classroom textbook and as an onboard reference handbook. This newly updated manual, the fourth revision, in keeping with Maritime Administration policy, has been restructured to include improved and more effective methods of plotting techniques for use in Ocean, Great Lakes, Coastwise and Inland Waters navigation.
