Carpentry And Building Construction 6th Edition

An introduction to the art of building, it has been revised and updated to reflect changes in the industry. Describes the materials used since ancient times—wood, stone, brick and the techniques by which they are made into buildings today—before proceeding to structural steel, reinforced and prestressed concrete, float glass, extruded aluminum, advanced gypsum products, synthetic rubber compounds and plastics. Deals with whole systems of building including foundations, framing, roofing, interiors, electrical and mechanical systems. Each chapter contains a summary, list of key terms and

concepts, review questions and references. Illustrated with over 300 line drawings and 700 photographs. Robert Peurifoy was a giant in the field of construction engineering and authored several books during his lifetime. This book last published in 1989 and will capitalize on the well-known name of the author. In this edition, computer calculations of costs and of modeling have been added as well as updated statistics, computer related examples and new problems. Civil, Environmental, and Construction Management Engineering Majors and Professionals will benefit from having this title on their shelf. This edition retains the conceptual strengths of the Peurifoy approach and organization from the previous
