religious decline but rather of polarization, with the numbers of “pro-” “no,” and “low” religious in flux. Using the most current information available, Bibby explores the implications of religious choices for personal and social well-being, spirituality, and attitudes towards death. The questions he asks are compelling and the answers thought-provoking whether one embraces the gods or not. This book is a case-study collection examining the influences and functions of British Columbia’s (BC) borders in the 21st century. BC. The chapters cover diverse topics including historical border disputes and cannabis culture and identity; the governance of transboundary water flows, migration, and preclearance policies for goods and people; and the emerging issue of online communities. The case studies provide examples that highlight the simultaneous but contradictory trends regarding borders in BC: while boundaries and bordering processes at the external borders shift away from the territorial boundary lines, self-determination, local politics and cultural identities reinscribe internal boundaries and borders, that are both virtual and real. Moreover, economic protectionism, racial

discourses and xenophobic narratives, driven by advances in technology, reinforce the territorial dimensions of borders. These case studies contribute to the literature challenging the notion that territorial borders are sufficient for understanding how borders function in BC; and in a few instances they illustrate the nuanced ways in which borders (or bordering processes) are becoming detached from territory. The chapters in this book were originally published as a special issue of the Journal of Borderlands Studies. This collection explores the unique spirituality and culture of Cascadia, which includes British Columbia, Washington and Oregon. Envied around the world, Cascadia is famous for

Despite this, Cascadia: The Elusive Utopia argues that most of the region's 14 million residents feel deeply "spiritual." Many gain their sense of the sacred from the spectacular and imposing land.

The Industrial Revolution, powered by oil and other fossil fuels, is spiraling into a dangerous endgame. The price of gas and food are climbing, unemployment remains high, the housing market has tanked, consumer and government debt is soaring, and the recovery is slowing. Facing the prospect of a second collapse of the global economy, humanity is desperate for a sustainable economic game plan to take us into the future. Here,

Jeremy Rifkin explores how Internet technology and renewable energy are merging to create a powerful "Third Industrial Revolution." He asks us to imagine hundreds of millions of people producing their own green energy in their homes, offices, and factories, and sharing it with each other in an "energy internet," just like we now create and share information online. Rifkin describes how the five-pillars of the Third Industrial Revolution will create thousands of businesses, millions of jobs, and usher in a fundamental reordering of human relationships, from hierarchical to lateral power, that will impact the way we conduct commerce, govern society, educate our children, and engage in civic life. Rifkin's vision is already gaining

traction in the international community. The European Union Parliament has issued a formal declaration calling for its implementation, and other nations in Asia, Africa, and the Americas, are quickly preparing their own initiatives for transitioning into the new economic paradigm. The Third Industrial Revolution is an insider's account of the next great economic era, including a look into the personalities and players — heads of state, global CEOs, social entrepreneurs, and NGOs — who are pioneering its implementation around the world. The world is confronted with multiple intersecting crises including exploitation, inequality, political polarization and climate change. World-repairing work is vitally needed.

But just at a time when humans most obviously require robust moral imaginaries on which to draw, it is no longer clear what kinds of beliefs, meanings, stories and encounters inspire them to act. We know that nonreligious identities are on the rise in numerous countries throughout the world. But with so much focus on the “non” part of nonreligion, what we don’t know is what nonreligious imaginaries actually look, sound and feel like. What do nonreligious people believe in? What stories inspire them? In what moments do they find meaning? This book seeks to answer these questions through a series of short essays exploring the nonreligious imaginaries that emerge in a range of world-repairing practices, including ethical

consumption, community organizing, eating habits, and environmental activism. In so doing, the book provides a crucial contribution to two areas of increasing social and political concern: First, the need to understand not only what nonreligious people are rejecting but also their sources of meaning and action. Second, the urgent need for cultural tools for mobilizing people towards more compassionate and sustainable practices.

confused with secularists, however, for many of them identify themselves as "spiritual but not religious" (SBNR). The response to this dramatic change in American religion has been amazingly mixed. While social scientists have been busy counting and categorizing them, the public has swung between derision and adulation. Some complain "nones" are simply shallow dilettantes, narcissistically concerned with their own inner world. Others hail them as spiritual giants, and ground-breaking pioneers. Rarely, however, have these "nones" been asked to explain their own views, beliefs, and experiences. In *Belief without Borders*, theologian and one-time SBNR Linda Mercadante finally gives these individuals a chance to

speak for themselves. This volume is the result of extensive observation and nearly 100 in-depth interviews with SBNRs across the United States. Mercadante presents SBNRs' stories, shows how they analyze their spiritual journeys, and explains why they reject the claims of organized religion. Surprisingly, however, Mercadante finds these SBNRs within as well as outside the church. She reveals the unexpected, emerging latent theology within this group, including the interviewees' creative concepts of divine transcendence, life after death, human nature, and community. The conclusions she draws are startling: despite the fact that SBNRs routinely discount the creeds and doctrines of organized religion, many have

religious values, and somatic practice, Spirit and the Obligation of Social Flesh offers guidance for moving amidst the affective dynamics that animate the streets of the global cities now amassing around our planet. Here theology turns decidedly secular. In urban medieval Europe, seculars were uncloistered persons who carried their spiritual passion and sense of an obligated life into daily circumambulations of the city. Seculars lived in the city, on behalf of the city, but—contrary to the new profit economy of the time—with a different locus of value: spirit. Betcher argues that for seculars today the possibility of a devoted life, the practice of felicity in history, still remains. Spirit now names a necessary “prosthesis,”

This book provides a new generation of research in which scholars are investigating mental health and human development as not merely the absence of illness or dysfunction, but also the presence of subjective well-being. Subjective well-being is a fundamental facet of the quality of life. The quality of

an individual's life can be assessed externally and objectively or internally and subjectively. From an objective standpoint, other people measure and judge another's life according to criteria such as wealth or income, educational attainment, occupational prestige, and health status or longevity. Nations, communities, or individuals who are wealthier, have more education, and live longer are considered to have higher quality of life or personal well-being. The subjective standpoint emerged during the 1950s as an important alternative to the objective approach to measuring individual's well-

being. Subjectively, individuals evaluate their own lives as evaluations made, in theory, after reviewing, summing, and weighing the substance of their lives in social context. Research has clearly shown that measures of subjective well-being, which are conceptualized as indicators of mental health (or 'mental well-being'), are factorially distinct from but correlated with measures of symptoms of common mental disorders such as depression. Despite countless proclamations that health is not merely the absence of illness, there had been little or no empirical research to verify this assumption.

Research now supports the hypothesis that health is not merely the absence of illness, it is also the presence of higher levels of subjective well-being. In turn, there is growing recognition of the personal and social utility of subjective well-being, both higher levels of hedonic and eudaimonic wellbeing.

Increased subjective well-being has been linked with higher personal and social 'goods': higher business profits, more worker productivity, greater employee retention; increased protection against mortality; increased protection against the onset and increase of physical disability with aging; improved cognitive

Agriculture and philosophy have been parts of a whole across history and remain so.

Philosophy informs wellbeing and contentment amidst the vagaries of existence, the primary concern of which has always been security of food. Science, once known as natural philosophy, is a major means of philosophical advance today. Agricultural science is presented as comprising all of these components. science across cultures and traditions from pre-agricultural times through the European Enlightenment to today, this work builds on neglected ancient insights. Perhaps the most profound of these insights is that our thoughts and actions may be seen as an integral part of nature. Rather than being independent agents with free will, our fears and guilt may be seen as active forces in the dynamics of nature itself, which includes our procurement of food. This conception offers a wider interaction than can be comprehended from current popular approaches.
