ACCOUNTING FOR NON-ACCOUNTING STUDENTS 10TH EDITION

THE ENTREPRENEURIAL MIND, Jeffrey A. Timmons, Harvard Business School "A well-written & practical book designed to aid persons contemplating an entrepreneurial venture. Timmons, a specialist in entrepreneurship, has done an excellent job covering the field. Starting with a broad overview of what entrepreneurship is, he concludes with an assessment aimed at summing up the strengths & weaknesses of a new enterprise in advance. In between, he

provides sound advice on necessary managerial skills; how to form, build, & reward a new venture team; planning & goal-setting; & the pros & cons of family businesses. Particular attention is also given to the need for ethical standards. Recommended." -- Library Journal. "A close look at the psychology of the entrepreneur & how that type of personality reacts with people & the world at large. Timmons does a good job of exploding myths & misconceptions, offering a wealth of insight into success, failure, & the hard work it takes to succeed in starting up a business or taking over the reins of an established or family-owned enterprise. The pitfalls of entrepreneurial life are analyzed, but more importantly, the positive attributes of the entrepreneur are emphasized. Numerous real-life case studies supplement the coverage." -- Booklist.

"The satisfaction of understanding how rainbows are formed, how ice skaters spin, or why ocean tides roll in and out-phenomena that we have all seen or experienced-is one of the best motivators available for building scientific literacy. This book attempts to make that sense of satisfaction accessible to non-science majors. Intended for use in a one-semester or two-quarter course in conceptual physics, this book is written in a narrative style, frequently using questions designed to draw the reader into a dialogue about the ideas of physics. Questions

This book synthesizes and integrates 40 years of research on the semantics of questions, and its interface with pragmatics and syntax, conducted within the formal semantics tradition. A wide range of topics are covered, including weak-strong exhaustiveness, maximality, functional answers, single-multiple-trapped list answers, embedding predicates, quantificational variability, concealed questions, weak islands, polar and alternative questions, negative polarity, and non-canonical questions. The literature on this rich set of topics, theoretically diverse and scattered across multiple venues, is often hard to assimilate. Veneeta Dayal, drawing on her own research, brings them together for the first time in a coherent, concise, and well-structured whole. Each chapter begins with a non-technical introduction to the issues discussed; semantically sophisticated accounts are then presented incrementally, with the major points summarized at the end of each section. Written in an accessible style, this book provides both a guide to one of the most vibrant areas of research in natural language and an account of how this area of study is developing. It will be a unique resource for the novice and expert alike, and seeks to appeal to a variety of readers without compromising depth and breadth of coverage.

Printed Working Papers help you efficiently complete end-of-lesson, end of-chapter, and reinforcement activities, as well as improved chapter study guides.
