

Certified Protection Professional Study Guide

For those preparing for the Certified Protection Professional® program and designation, The Complete Guide for CPP Examination Preparation provides a thorough foundation of essential security concepts and practices in a single volume. This guide does more than impart the information required for you to pass the CPP exam, it also delivers insight into what taking the exam is like, and provides an appreciation for the work and knowledge needed to gain CPP certification. The book addresses ten critical areas: security management, investigations, protection of sensitive information, substance abuse, physical security, personnel security, emergency planning, management of a guard force, legal aspects of security, and the role of a security professional as a liaison with both management and law enforcement. The authors include sample test questions for you to take after completing each of the areas of study. Although these are not questions that appear on the actual exam, they do convey the principles and concepts that the exam emphasizes, and are valuable in determining if you have mastered the required information.

*Effective Security Management, 5e, teaches practicing security professionals how to build their careers by mastering the fundamentals of good management. The International Foundation for Protection Officers (IFPO) has for many years provided materials to support its certification programs. The current edition of this book is being used as the core text for the Security Supervision and Management Training/Certified in Security Supervision and Management (CSSM) Program at IFPO. The CSSM was designed in 1988 to meet the needs of the security supervisor or senior protection officer. The book has enjoyed tremendous acceptance and success in the past, and the changes in this third edition, vetted by IFPO, make it still more current and relevant. Updates include 14 new chapters, 3 completely revised chapters, "Student Performance Objectives" in each chapter, and added information on related resources (both print and online). * Completion of the Security Supervision and Management Program is the initial step toward the Certified in Security Supervision and Management (CSSM) designation * Over 40 experienced security professionals contribute chapters in their area of specialty * Revised throughout, and completely updated with 14 new chapters on topics such as Leadership, Homeland Security, Strategic Planning and Management, Budget Planning, Career Planning, and much more. * Quizzes at the end of each chapter allow for self testing or enhanced classroom work

Originally written by a team of Certified Protection Professionals (CPPs), Anthony DiSalvatore gives valuable updates to The Complete Guide for CPP Examination Preparation. This new edition contains an overview of the fundamental concepts and practices of security management while offering important insights into the CPP exam. Until recently the security profession was regarded as a "necessary evil." This book is a comprehensive guide to a profession that is now considered critical to our well-being in the wake of 9/11. It presents a practical approach drawn from decades of combined experience shared by the authors, prepares the reader for the CPP exam, and walks them through the certification process. This edition gives revised and updated treatment of every subject in the CPP exam, encourages and outlines a three-part program for you to follow, and includes sample questions at the end of each area of study. Although these are not questions that appear on the actual exam, they convey the principles and concepts that the exam emphasizes and are valuable in determining if you have mastered the information. The book also includes a security survey that covers all facets of external and internal security, as well as fire prevention. The Complete Guide for CPP Examination Preparation, Second Edition allows you to move steadily forward along your path to achieving one of the most highly regarded certifications in the security industry.

Exam SY0-601

Specialty (DAS-C01) Exam

In the practical real world a CPP may be a security manager, an external consultant, or a law enforcement agent. For purpose of the exam, however, you want to position yourself as a hired consultant - one who acts as an advisor to the company management. The company is your client, and you are helping it out. You advise, you guide, and you recommend. You need to understand your client. If your client is absolutely new to security, full scale interviews and statistical analysis on crimes may be necessary. However, if your client has a working security mechanism in place, then you should conduct assessment basing primarily on inputs from management. In other words, management determines the depth and scope of the security project. Management makes the decisions. You suggest ways to improve, then carry out the decisions made by management. You don't normally make decisions for your client. It is safe to say that you assume the role of project manager for your client's security project. The security project would start by discussing the scope of work with your client. The most important meeting between you and the client would be the initial goal setting and policy review meeting. Senior management is going to get involved, and you are going to act as the facilitator. From this meeting you become aware of the level of risk your client is willing to assume and accept. Your work would then start from there. When working on a project it is important to understand the background and operation of the client. You also want to know what you are up against. Protection against vandalism is totally different from protection against terrorist attack. A CPP is more on the planning and management side of security. A security guard professional, on the other hand, is to provide client with professional protective services. It is believed that the CPP certification is more general in nature, while the PSP certification is way more specific and in-depth in physical security. We create these self-practice test questions referencing the concepts and principles currently valid in the exam. Each question comes with an answer and a short explanation which aids you in seeking further study information. For purpose of exam readiness drilling, this product includes questions that have varying numbers of choices. Some have 2 while some have 5 or 6. We want to make sure these questions are tough enough to really test your readiness and draw your focus to the weak areas. Think of these as challenges presented to you so to assess your comprehension of the subject matters. The goal is to reinforce learning, to validate successful transference of knowledge and to identify areas of weakness that require remediation. The questions are NOT designed to "simulate" actual exam questions. "realistic" or actual questions that are for cheating purpose are not available in any of our products.

Since the first edition of Security and Loss Prevention was published in 1983, much has changed in security and loss prevention considerations. In the past five years alone, security awareness and the need for added business continuity and preparedness considerations has been uniquely highlighted given events such as Katrina, 9/11, the formation of the Department of Homeland Security, and the increase in world terrorist events. This edition of Security and Loss Prevention is fully updated and encompasses the breadth and depth of considerations involved in implementing general loss prevention concepts and security programs within an organization. The book provides proven strategies to prevent and reduce incidents of loss due to legal issues, theft and other crimes, fire, accidental or intentional harm from employees, as well as the many ramifications of corporate mismanagement. The new edition contains a brand new terrorism chapter, along with coverage on background investigations, protection of sensitive information, internal threats, and considerations at select facilities (nuclear, DoD, government and federal). Author Philip Purpura once again demonstrates why students and professionals alike rely on this best-selling text as a timely, reliable resource. - Covers the latest professional security issues surrounding Homeland Security and risks presented by threats of terrorism - Recommended reading for ASIS International's prestigious CPP Certification - Cases provide real-world applications

Students who are beginning studies in technology need a strong foundation in the basics before moving on to more advanced technology courses and certification programs. The Microsoft Technology Associate (MTA) is a new and innovative certification track designed to provide a pathway for future success in technology courses and careers. The MTA program curriculum helps instructors teach and validate fundamental technology concepts and provides students with a foundation for their careers as well as the confidence they need to succeed in advanced studies. Through the use of MOAC MTA titles you can help ensure your students future success in and out of the classroom. Vital fundamentals of security are included such as understanding security layers, authentication, authorization, and accounting. They will also become familiar with security policies, network security and protecting the Server and Client.

The growing concern over the number of accidental firearm shootings, especially those involving children, prompted passage of the initial handgun safety law which went into effect in 1994. The stated intent of the California Legislature in enacting the current FSC law is for persons who obtain firearms to have a basic familiarity with those firearms, including, but not limited to, the safe handling and storage of those firearms. The statutory authority for this program is contained in Penal Code sections 26840 and 31610 through 31700. These statutes mandate DOJ to develop, implement and maintain the FSC Program. Pursuant to Penal Code section 26840, a firearms dealer cannot deliver a firearm unless the person receiving the firearm presents a valid FSC, which is obtained by passing a written test on firearm safety. Prior to taking delivery of a firearm from a licensed firearms dealer, the purchaser/recipient must also successfully perform a safe handling demonstration with that firearm.

The Admission Test Series prepares students for entrance examinations into college, graduate and professional school as well as candidates for professional certification and licensure. The Certified Protection Professional Examination (CPP) Passbook(R) prepares you by sharpening the skills and abilities necessary to succeed on your upcoming entrance exam. It provides a series of informational texts as well as hundreds of questions and answers in the areas that will likely be covered on your upcoming exam, including but not limited to: security principles and practices; investigating; personnel security; emergency practices; information security; and more.

In the practical real world a CPP may be a security manager, an external consultant, or a law enforcement agent. For purpose of the exam, however, you want to position yourself as a hired consultant - one who acts as an advisor to the company management. The company is your client, and you are helping it out. You advise, you guide, and you recommend. You need to understand your client. If your client is absolutely new to security, full scale interviews and statistical analysis on crimes may be necessary. However, if your client has a working security mechanism in place, then you should conduct assessment basing primarily on inputs from management. In other words, management determines the depth and scope of the security

project. Management makes the decisions. You suggest ways to improve, then carry out the decisions made by management. You don't normally make decisions for your client. It is safe to say that you assume the role of project manager for your client's security project. The security project would start by discussing the scope of work with your client. The most important meeting between you and the client would be the initial goal setting and policy review meeting. Senior management is going to get involved, and you are going to act as the facilitator. From this meeting you become aware of the level of risk your client is willing to assume and accept. Your work would then start from there. When working on a project it is important to understand the background and operation of the client. You also want to know what you are up against. Protection against vandalism is totally different from protection against terrorist attack. A CPP is more on the planning and management side of security. A security guard professional, on the other hand, is to provide client with professional protective services. It is believed that the CPP certification is more general in nature, while the PSP certification is way more specific and in-depth in physical security. To summarize, the major knowledge areas include:Security Principles and TheoriesBusiness PrinciplesPersonnel Security Physical SecurityInformation SecurityCrisis Management Investigations Legal MattersWe give you knowledge information relevant to the exam specification. To be able to succeed in the real exam, you'll need to apply your earned knowledge to the question scenarios. Many of the exam questions are written to be less straight forward. They tend to be framed within the context of short scenarios. An advice: Do NOT rely on a single source for exam preparation. To secure exam success, always use multiple sources and read as much as possible!
