

Land Carbon Cycle Modeling

Proceedings of the National Synthesis Symposium on the Ecology of Biological Invasions

The Boreal forest is the northern-most forest in the world, whose organisms and dynamics are shaped by low temperature and high latitude. The Alaskan Boreal forest is warming as rapidly as any place on earth, providing an opportunity to examine a biome as it adjusts to change. This book looks at this issue.

This new revision reflects the many changes and approaches to forestry that have occurred in the field of forestry over the last decade. This book is intended to provide students with a comprehensive introduction to the important aspects of the field of forestry. Treatment is comprehensive and more advanced than other forestry textbooks, featuring a new section on Forests and Society to reflect the increasing human influences on forestry.

Ecological Economics

Introduction to Forest Ecosystem Science and Management
