 This book offers a comprehensive and practice-oriented guide to risk management, with a special emphasis on the physical and environmental risks related to the operations of railway systems. It is intended to provide a roadmap for managing the risk by controlling safety. Starting with a concise historical introduction and by presenting basic concepts of risk management of the railway systems and their complexity. Then, it goes in depth into the process of risk management, describing the main elements, from risk identification, analysis and assessment to risk monitoring and communication. Different risk assessment techniques are reviewed in detail, and the main components of a risk management plan are presented. The book concludes with health risk management, describing strategies for performing health risk assessments for staff in safety-critical positions. Based on the conviction that controlling safety is the main strategy in managing risk, and on the fact that the systems we would like to control are complex ones, this book provides transport and safety engineers with the necessary knowledge of the railway system.

ISO/IEC 20000 is the international standard for achieving quality within IT Service Management. As individuals achieve success in Service Management frameworks such as ITIL®, many organizations have identified the benefits of making the jump to full corporate accreditation. But, having made the decision to invest in this standard, what is the best way to implement adoption in an efficient and successful way? This thorough, practical guide has been put together by real experts with real experience of how ISO/IEC 20000 works in the workplace and in the real world. Part A of this title covers the step by step description of the ISO 20000 implementation process. Part B contains real case studies from organizations who have successfully achieved ISO/IEC accreditation. This Official ISMF guide is unique in that it not only describes the implementation process. It also suggests solutions to common problems and set-backs. An understanding of the many business pressures means that practical guidance on the business case, measuring success (or not), or the need for quick wins are all included in this book, making it an invaluable companion for all those working on an implementation project. A sister guide to the hugely successful Official ISMF 'Introduction to ISO/IEC 20000' book, readers will find that this book becomes a key asset in delivering a practical, down to earth implementation program. Foreword by John Stewart of OGC.

The 18th CIRP International Conference on Life Cycle Engineering (LCE) 2011 continues a long tradition of scientific meetings focusing on the exchange of industrial and academic knowledge and experiences in life cycle assessment, product development, sustainable manufacturing and end-of-life-management. The theme "Globalized Solutions for Sustainability in Manufacturing" addresses the need for engineers to develop solutions which have the potential to address global challenges by providing products, services and processes taking into account local capabilities and constraints to achieve an economically, socially and environmentally sustainable society in a global perspective. Globalized Solutions for Sustainability in Manufacturing do not only involve products or services that are changed for a local market by simple substitution or the omitting of functions. Products and services need to be addressed that ensure a high standard of living everywhere. Resources required for manufacturing and use of such products are limited and not evenly distributed in the world. Locally available resources, local capabilities as well as local constraints have to be drivers for product- and process innovations with respect to the entire life cycle. The 18th CIRP International Conference on Life Cycle Engineering (LCE) 2011 serves as a platform for the discussion of the resulting challenges and the collaborative development of new scientific ideas.
