New Theatre Quarterly provides a lively international forum where theatrical scholarship and practice can meet, and where prevailing dramatic assumptions can be subjected to vigorous critical questioning. It shows that theatre history has a contemporary relevance, that theatre studies need a methodology, and that theatre criticism needs a language.

Articles in volume 73 include:

Performance, Embodiment, Voice: the Theatre/Dance Cross-overs of Dodin, Bausch, and Forsythe; The Performative Self: Improvisation for Self and Other; The Events of June 1848: the 'Monte Cristo' Riots and the Politics of Protest; Culture, Memory, and American Performer Training; 'The Maker and the Tool': Charles Parker, Documentary Performance, and the Search for a Popular Culture; Simple Pleasures: the Ten-Minute Play, Overnight Theatre, and the Decline of the Art of Storytelling; Archive or Memory? The Detritus of Live Performance; NTQ Reports and Announcements; NTQ Book Reviews.

The Literacy Triangle

Winner of the prestigious Paul A. Samuelson Award for scholarly writing on lifelong financial security, John Cochrane's *Asset Pricing* now appears in a revised edition that unifies and brings the science of asset pricing up to date for advanced students and professionals. Cochrane traces the pricing of all assets back to a single idea--price equals expected discounted payoff--that captures the macro-economic risks underlying each security's value. By using a single, stochastic discount factor rather than a separate set of tricks for each asset class, Cochrane builds a unified account of modern asset pricing. He presents applications to stocks, bonds, and options. Each model--consumption based, CAPM, multifactor, term structure, and option pricing--is derived as a different specification of the discounted factor. The discount factor framework also leads to a state-space geometry for mean-variance frontiers and asset pricing models. It puts payoffs in different states of nature on the axes rather than mean and variance of return, leading to a new and conveniently linear geometrical representation of asset pricing ideas. Cochrane approaches empirical work with the Generalized Method of Moments, which studies sample average prices and discounted payoffs to determine whether price does equal expected discounted payoff. He

translates between the discount factor, GMM, and state-space language and the beta, mean-variance, and regression language common in empirical work and earlier theory. The book also includes a review of recent empirical work on return predictability, value and other puzzles in the cross section, and equity premium puzzles and their resolution. Written to be a summary for academics and professionals as well as a textbook, this book condenses and advances recent scholarship in financial economics.

Accelerate learning with high-impact strategies. Beginning and veteran teachers alike will find insights and practices they can use immediately. The trusted series of workbooks by Philip H. Pollock III and Barry C. Edwards continues with A Microsoft Excel® Companion to Political Analysis. In this new guide, students dive headfirst into actual political data working with the ubiquitous Excel software. Students learn by doing with new guided examples, annotated screenshots, step-by-step instructions, and exercises that reflect current scholarly debates in varied subfields of political science, including American politics, comparative politics, law and courts, and international relations. Chapters cover all major topics in political data analysis, from descriptive statistics through logistic regression, all with worked examples and exercises in Excel. No matter their professional goals, students can gain a leg up for their future careers by developing a working knowledge of statistics using Excel. By encouraging students to build on their existing familiarity with the Excel program, instructors can flatten the statistics learning curve and take some of the intimidation out of the learning process. Paul Bambrick-Santoyo (Managing Director of Uncommon Schools) shows leaders how they can raise their schools to greatness by following a core set of principles. These seven principles, or "levers," allow for consistent, transformational, and replicable growth. With intentional focus on these areas, leaders will leverage much more learning from the same amount of time investment. Fundamentally, each of these seven levers answers the core questions of school leadership: What should an effective leader do, and how and when should they do it. Aimed at all levels of school leadership, the book is for any principal, superintendent, or educator who wants to be a transformational leader. The book includes 30 video clips of top-tier leaders in action. These videos bring great schools to you, and support a deeper understanding of both the components of success and how it looks as a whole. There are also many helpful rubrics, extensive professional development tools, calendars, and templates. Explores the core principles of effective leadership Author's charter school, North Star Academy in Newark, New Jersey, received the highest possible award given by the U.S. Department of Education; the National Blue Ribbon Print version includes an instructive DVD with 30 video clips to show how it looks in real life. E-book customers: please note that details on how to access the content from the DVD may be found in the e-book Table of Contents. Please see the section: "How to Access DVD Contents"

Bambrick-Santoyo has trained more than 1,800 school leaders nationwide in his work at Uncommon Schools and is a recognized expert on transforming schools to achieve extraordinary results.

What does rigor, a word that frequently pops up in conversations about education, really mean? More specifically, what does it mean for literacy instruction, and how does it relate to challenging standards-based assessments? In this informative and practical guide, literacy expert Nancy Boyles uses the framework from Webb's Depth of Knowledge (DOK) to answer these questions, offering experience-based advice along with specific examples of K-8 assessment items. Boyles defines rigor and shows how it relates to literacy at each DOK level and explains the kind of thinking students will be expected to demonstrate. She then tackles the essence of what teachers need to know about how DOK and its associated rigors are measured on standards-based assessments. Specifically, readers learn how each DOK rigor aligns with standards, text complexity, close reading, student interaction, the reading-writing connection, and formative assessment. Teachers, coaches, and administrators will find clear guidance, easy-to-implement strategies, dozens of useful teaching tools and resources, and encouragement to help students achieve and demonstrate true rigor in reading and
