This book examines the conceptual development of control in the literature of both management and accounting disciplines, from 1900 to 1980. In order to portray the development of control concepts over time, the chapters are organized into sections relating to the schools of thought from which they emanated and a model of control is constructed to represent each group of concepts and their hypothesised inter-relationships. Having traced the development of control models a comparative analysis of historical development in the two streams of management and accounting literature is undertaken. This analysis reveals a pronounced lag of accounting development behind that of management literature. The reasons for this are then discussed.

"This book is intended to drive home the fundamental ideas of managerial accounting and motivate students to actually want to study the subject. As you will see, the text has a number of unique features that help accomplish these goals. Based on my teaching experience and from what we have heard from professors using the previous editions, we believe students and professors want a textbook that: Recognizes that most students will become managers, not accountants Focuses attention on decision making Stresses the fact that "You Get What You Measure" Motivates students to learn managerial accounting by connecting concepts and techniques to the real world Recognizes the importance of service businesses Is clear, concise and current"

The absence of a book dealing with rubber processing has been apparent for some time and it is surprising that a straightforward text has not been produced. However, this book goes far beyond the scope of a simple technical approach and deals with the full spectrum of activities which lead to successful and profitable product manufacture. The need to deliver a product to a customer at the right time, at the right cost, and at the right quality is a basic premise on which the book is based. The increasingly stringent demands of customers for products that can be introduced directly into an assembly or production line without goods inwards inspection, are placing increasing pressures on the manufacturer. As a result, it is becoming essential to achieve and sustain product quality and consistency, by the monitoring and control of manufacture, at a level which renders all products saleable. The book has been written to satisfy the needs of practitioners in the rubber industry and is certainly not another descriptive text which is only read for interest when more important matters are not pressing. My close cooperation with Philip K. Freakley during the writing of the book has resulted in the incorporation of many of the viewpoints and methods which I have developed and refined during more than 38 years in the rubber industry.

This revised and updated fifth edition of Accounting for Managers builds on the international success of the previous editions in explaining how accounting is used by non-financial managers. Whilst immensely valuable for planning, decision-making and control, users of accounting information need to recognize the assumptions behind, and the limitations of particular accounting techniques. As in the previous editions, the book links theory with practical examples and case studies drawn from real business situations across a wide range of manufacturing, retail and service industries.
