The economic literature on international migration interests policymakers as well as academics throughout the social sciences. These volumes, the first of a new subseries in the Handbooks in Economics, describe and analyze scholarship created since the inception of serious attention began in the late 1970s. This literature appears in the general economics journals, in various field journals in

question of what constitute "like products". Trade disputes will often involve an examination of whether the products in question are in competition with one another. The most common term used for this test is to ask whether they are "like products" - that is to ask whether products are sufficiently similar for consumers to see them as substitutable - and thus whether they are subject to the rules of the WTO and GATT. The central thesis of this book is that despite the centrality of the principle of 'like products' to the WTO, it has not been

consistently interpreted, and therefore the risk of discriminatory practice remains. The author, through analyzing legal and economic arguments, sets about defining the concept of 'like products' in such a way as to consistently give effect to WTO aims.

English, abstract: This paper will address the question what strategic goals stood behind the promotion and implementation of free trade between the United States and Canada. The purpose is to evaluate the Canada-U.S. Free Trade Agreement (CUFTA) and the North American Free Trade Agreement (NAFTA) in respect to the objectives of both parties that were not commonly shared in the beginning. It is about the consequences of power imbalance for regional free trade and not about the social costs that are intensively discussed and certainly heavily

felt in both countries. Since the view of a power asymmetry that exists between the two countries should be rather uncontested, the central idea of the following text is to examine in detail at which points this has shaped the content of the two agreements. This approach is inspired by the broader question, whose interests free trade serves in general. An important rhetoric strategy of promoters of the neo-liberal agenda is to suggest that the free play of market forces encouraged by such agreements gives all participants the same fair

opportunities to engage in trade without intervention from governments. Consequently, all members of the distinct community will benefit from freer trade. For it is rather clear that power and national interests always play a role in politics - in this case in the processes leading to free trade agreements - it shall be demonstrated how this works in particular.

*This paper focuses on the sluggish growth of world trade relative to income growth in recent years. The analysis uses an empirical strategy based on an error correction model to assess whether the global trade slowdown is structural or cyclical. An estimate of the relationship between trade and income in the past four decades reveals that the long-term trade elasticity rose sharply in the 1990s, but declined significantly in the 2000s even before the global financial crisis. These results suggest that trade is growing slowly not only because of slow growth of Gross Domestic Product (GDP), but also*

*Simplified is written for beginners studying economics and related subjects. The book is suitable for both conventional and non-conventional students as a complete course materials or part of a course in all nations. Having been a University lecturer for quite a while, my intention in writing the book is to produce a reading material, which learners can read and understand independently. When one reads the chapters, one discovers that the writing style is simple and straightforward, ideal for both economics students and those in related disciplines. The book is worldwide focused; hence it is*

*suitable for readers in both developing and developed nations. The current publication is divided into two parts comprising twenty chapters. The chapters cover two branches of economics, microeconomics and macroeconomics. The first chapter is an introduction to economics. In this chapter, apart from various definitions of economics presented, the fundamental economic problems in any society such as what to produce, how to produce and for whom to produce, are also highlighted. Chapters 3, 4 and 7 present theories of production, consumer behavior and cost respectively. In these chapters, insight will be gained into how a producer can minimize cost and maximize output; and also how a consumer can maximize utility given the limited resources at his or her disposal. Chapters 5 and 6 discuss theories of demand and supply of commodities, that is how consumers and producers*

*Importing Into the United States provides wide-ranging information about the importing process and import requirements. We have made every effort to include essential requirements, but it is not possible for a book this size to cover all import laws and regulations. Also, this publication does not supersede or modify any provision of those laws and regulations. Legislative and administrative changes are always under consideration and can occur at any time. Quota limitations on commodities are also subject to change. Therefore, reliance solely on the information in this book may not meet the "reasonable care" standard required of importers.*

(which includes Marxism, world-systems, and dependency theory) supplemented by references to other theoretical and conceptual understandings mentioned below Paul R. Viotti and Mark V. Kauppi wrote this book because they believe it is possible and essential to improve a student's conceptual and theoretical thinking about international relations. If one does not think conceptually, a course in world politics threatens to become little more than current events. Hence, they structured the book in such a way that key concepts, themes, and trends are utilized throughout the discussion of various topics.
