

## **Chapter 28 World Geography Today**

Approaches to Human Geography is the essential student primer on theory and practice in human geography. It is a systematic review of the key ideas and debates informing post-war geography, explaining how those ideas work in practice. In three sections, the text provides:

- A comprehensive contextualising essay: Introducing Philosophies, People and Practices
- Philosophies: written by the principal proponents, easily comprehensible accounts of: Positivist Geographies; Humanism; Feminist Geographies; Marxism; Structuration Theory; Behavioral Geography; Realism; Post Structuralist Theories; Actor-Network Theory; and Post Colonialism
- People: prominent geographers explain events that formed their ways of knowing; the section offers situated accounts of theory and practice by, for example: David Ley; Linda McDowell; and David Harvey
- Practices: applied accounts of Quantification, Evidence and Positivism; Geographic Information Systems; Humanism; Geography, Political Activism, and Marxism; the Production of Feminist Geographies; Poststructuralist Theory; Environmental Inquiry in a Postcolonial World; Contested Geographies

· Student Exercises and Glossary

Avoiding jargon - while attentive to the rigor and complexity of the ideas that underlie geographic knowledge – the text is written for students who have not met philosophical or theoretical approaches before. This is a beginning guide to geographic research and practice. Comprehensive and accessible, it will be the core text for courses on Approaches to Human Geography; Philosophy and Geography; and the History of Geography; and a key resource for students beginning research projects.

Reading this book is your first step to becoming a competent human geography researcher. Whether you are a novice needing practical help for your first piece of research or a professional in search of an accessible guide to best practice, *Conducting Research in Human Geography* is a unique and indispensable book to have at hand. The book provides a broad overview of theoretical underpinnings in contemporary human geography and links these with the main research methodologies currently being used. It is designed to guide the user through the complete research process, whether it be a one day field study or a large project, from the nurturing of ideas and development of a proposal, to the design of an enquiry, the generation and analysis of data, to the drawing of conclusions and the presentation of findings.

"The book covers some of the (traditionally) most obtuse and difficult-to-grasp philosophical ideas that have influenced geographers/geography. The fact that these are presented in an inclusive and accessible manner is a key strength. Many students have commented that the chapters they have read have encouraged them to read more in this field, which is fantastic from a lecturer's perspective." - Richard White, Sheffield Hallam University A new edition of the classic Approaches text for students, organised in three sections, which overviews and explains the history and philosophy of Human Geographies in all its applications by those who practise it: Section One – Philosophies: Positivist Geography / Humanism / Feminist Geographies / Marxisms / Structuration Theory / Human Animal / Realism / Postmodern Geographies/ Poststructuralist Theories / Actor-Network Theory, / Postcolonialism / Geohumanities / Technologies Section Two – People: Institutions and Cultures / Places and Contexts / Memories and Desires / Understanding Place / Personal and Political / Becoming a Geographer / Movement and Encounter / Spaces and Flows / Places as Thoughts Section Three – Practices: Mapping and Geovisualization / Quantification, Evidence, and Positivism / Geographic Information Systems / Humanism / Activism / Feminist Geographies / Poststructuralist Theories / Psychoanalysis / Environmental Inquiry / Contested Geographies and Culture Wars Fully updated throughout and with eight brand new chapters - this is the core text for modules on history, theory, and practice in Human Geography.

Research Ethics for Human Geography is a lively and engaging introduction to key ethical issues in geographical research by leading figures in the discipline. It addresses the wide range of ethical issues involved in collecting, analysing and writing up research across the social sciences, and explores and explains the more specific ethical issues associated with different forms of geographical inquiry. This chapter comprises detailed summaries and definitions, real-life case studies, student check-lists and annotated recommendations for reading, making the book a valuable toolkit for students undertaking all forms of geographical research, from local and overseas fieldwork, through to dissertation research, methods-training, and further research.

Historical geography is an active, theoretically-informed and vibrant field of study within modern geography, with strong interdisciplinary connections with the humanities and the social sciences. The SAGE Handbook of Historical Geography provides an international and in-depth overview of the discipline, with chapters that examine the history, present condition and future significance of historical geography in relation to recent developments and current research. The Handbook is in two volumes, divided across nine parts. Volume One includes commentaries on the history and geography of historical geography, and reviews how historical geographers have considered the appropriation, management and representation of landscape, the changing geographies of property, land, money and financial capital, and the demographic, medical and political analysis of the world's growing and mobile population. Volume Two shows how historical geographers have made significant contributions to geopolitical debates about the relationships between nation-states and empires, to environmental challenges posed by human interaction with the natural world, to studies of the cultural, intellectual and political implications of modern science and technology, and to investigations of communication, artefacts, performances and representations. The final part reviews the methodological and epistemological challenges of historical geography as a publicly engaged research practice. Part 1: Histories and Geographies Part 2: Land and Landscapes Part 3: Property and Money Part 4: Population and Mobility Part 5: Territory and Geopolitics Part 6: Environment and Nature Part 7: Science and Technology Part 8: Meaning and Communication Part 9: Studies in Practice
