

Chapter 3 Ethics In Pharmacy Practice

The pharmacy profession is extensively regulated at both the Federal and State level. Legal requirements and regulations underpin all of the functional areas in which pharmacy technicians perform their duties. In a simple, straightforward style, the Legal Handbook for Pharmacy Technicians teaches pharmacy technicians the essentials on how pharmacy is regulated. Issues such as the role of laws and regulations; regulation of prescription and non-prescription drugs; FDA drug labeling, package inserts, and warnings; state registration and licensing of technicians; and confidentiality and privacy issues are covered in a concise, understandable way. Inside you'll find detailed information on: Legal and regulatory systems for pharmacy in the U.S. Federal and state laws and regulations for drugs Controlled substance laws and regulations Confidentiality and privacy of patient records and information This guide also includes chapter learning objectives, key points, and chapter review questions and answers to prepare pharmacy technicians for the PTCB exam as well as their daily professional activities.

Drug misuse is a major challenge for health professionals in the 21st century, and community pharmacy holds a key place in the management of prescribed medication, the provision of health education and promotion messages to drug users. Two decades ago there would have been no need for a book to describe such the role of community pharmacy; however, since more people are injecting drugs now and HIV is on the rise, community pharmacists have found their services in higher demand. The quality practice of tomorrow hinges on trained and competent practitioners working in a variety of community pharmacy settings. Drug Misuse and Community Pharmacy explains the historical, research and practical aspects. Experts use a practical and evidence-based approach to educate students

of pharmacy, pre-registration pharmacists, community pharmacists working with drug users and anyone involved in developing and managing primary healthcare for drug misusers. Pharmacists constantly face ethical choices -- sometimes dramatic matters of life-and-death decisions, but more often subtle, less conspicuous choices that are nonetheless important. Case Studies in Pharmacy Ethics identifies and discusses the broad range of ethics issues pharmacists confront in practice. Ranging from situations faced in direct patient care to broader issues, this book uses cases to explore topics and the ethical framework within which practitioners make decisions about such issues as assisted suicide, conscientious refusal, pain management, and confidentiality as well as the equitable distribution of drug resources within institutions or managed care organizations and clinical studies on vulnerable populations. As the scope of the pharmacist's role expands, pharmacists find themselves facing new ethical challenges. This third edition accounts for some of the many changes in pharmacy practice and in the delivery of health care since the second edition. It includes an entirely new chapter on health insurance and health system planning, and a discussion of the impact of the Affordable Care Act and cases that are updated to reflect current pharmacy practice models. It serves as a valuable resource regarding topics that are both specific to pharmacy practice and those that involve the health care system more generally.

As one of the most massive and successful business sectors, the pharmaceutical industry is a force for good in the community, yet its behaviour is frequently questioned: could it serve society at large better than it has done in the recent past? Its own internal ethics, both in business and science, may need a careful reappraisal, as may the extent to which the law - administrative, civil, and criminal - succeeds in guiding (and where necessary constraining) it. The rules of behaviour that may be considered to apply to today's pharmaceutical industry have emerged over a very long period and the process goes on. Even the immensely detailed standards for quality, safety and efficacy laid down in drug law and regulation during the second half of the twentieth century have their limitations as tools for ensuring that the public interest is well served. In particular, national and regional regulatory agencies are heavily dependent on industrial data for their decision-making, their standards and competence vary, and even the existing network of agencies does not cover the entire world. What is more there are many areas of law and regulation affecting the pharmaceutical industry, concerning for example the pricing of medicines, the conduct of clinical studies, the health protection of workers and concern for the environment. In some fields it is indeed hard enough possible to maintain standards through regulation. Professor N.M. Graham Dukes, a physician and lawyer with long term experience in industrial research management, academic study and international drug policy, provides here a powerfully documented analysis into the way this

drug resources within institutions and managed care plans, confidentiality, and alternative and non-traditional therapies. Veatch and Haddad's book, first published in 1999, was the first collection of case studies based on the real experiences of practicing pharmacists, for use as a teaching tool for pharmacy students. The second edition accounts for the many changes in pharmacy since 1999, including assisted suicide in Oregon, the purchasing of less expensive drugs from Canada, and the influence of managed care on prescriptions. The presentation of some cases is shortened, most are revised and updated, and two new chapters have been added. The first chapter presents a new model for analyzing cases, while the second focuses on the ethics of drug distribution systems, for example hospitals where pharmacists are forced to choose drugs based on cost-effectiveness, and internet based pharmacies.

The Integrated Foundations of Pharmacy series is for those at the start of their journey to become a pharmacist. It helps students understand how a drug molecule is made and then turned into medicine; the role they will have when dispensing; and how the medicine works in the body. Most importantly, it shows how all of these aspects come together.

This textbook offers a unique and accessible approach to ethical decision-making for practicing pharmacists and student pharmacists. Unlike other texts, it gives clear guidance based on the fundamental principles of moral philosophy, explaining them in simple language and illustrating them with abundant clinical examples and case studies. The strength of this text is in its emphasis on normative ethics and critical thinking, and that there is truly a best answer in the vast majority of cases, no matter how complex. The authors place high trust in a pharmacist's moral judgment. This teaches the reader how to think, based on ethical principles, not necessarily what to think. This means navigating between the two extremes of overly theoretical and excessively prescriptive. The cogent framework given in this text uses the language of competing duties, identifying the moral principles at stake that create duties for the pharmacist. This is the balancing act of normative ethics, and of deciding which duties should prevail in a given clinical situation.

Indian doctors, schooled in Western science, are ignorant of the medical ethics of their own culture. They make a conscious effort to distance themselves from Ayurvedic medicine, in which the ethical codes are enshrined. Teachers and students forget that ethical values have universal applicability, regardless of the mode of practice - Western or traditional - and that the patient remains the same regardless of the system. Undoubtedly, many Indian doctors have practices in getting entry into medical colleges as students.

Historically associated with military service, conscientious objection has become a significant phenomenon in health care. Mark Wicclair offers a comprehensive ethical analysis of conscientious objection in three representative health care professions: medicine, nursing and pharmacy. He critically examines two extreme positions: the 'incompatibility thesis', that it is contrary to the professional obligations of practitioners to refuse provision of any service within the scope of their professional competencies.

'conscience absolutism', that they should be exempted from performing any act contrary to their conscience. He argues for a compromise approach that accommodates conscience-based refusals within the limits of specified ethical constraints. He also explores conscientious objection by students in each of the three professions, discusses conscience protection legislation and conscience-based refusals by pharmacies and hospitals, and analyzes several cases. His book is a valuable resource for scholars, professionals, trainees, students, and anyone interested in this increasingly important aspect of health care.
